Disclaimer

Analog Devices, Inc. reserves the right to change this product without prior notice. Information furnished by Analog Devices is believed to be accurate and reliable. However, no responsibility is assumed by Analog Devices for its use; nor for any infringement of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under the patent rights of Analog Devices, Inc.

Trademark and Service Mark Notice

The Analog Devices logo, Blackfin, CrossCore, EngineerZone, EZ-Extender, EZ-KIT Lite, and VisualDSP++ are registered trademarks of Analog Devices, Inc.

All other brand and product names are trademarks or service marks of their respective owners.

Regulatory Compliance

The Blackfin USB-LAN EZ-Extender is designed to be used solely in a laboratory environment. The board is not intended for use as a consumer end product or as a portion of a consumer end product. The board is an open system design which does not include a shielded enclosure and therefore may cause interference to other electrical devices in close proximity. This board should not be used in or near any medical equipment or RF devices.

The Blackfin USB-LAN EZ-Extender has been certified to comply with the essential requirements of the European EMC directive 89/336/EEC amended by 93/68/EEC and therefore carries the “CE” mark.

The Blackfin USB-LAN EZ-Extender has been appended to Analog Devices, Inc. Technical Construction File (TCF) referenced ‘DSPTOOLS1’ dated December 21, 1997 and was awarded CE Certification by an appointed European Competent Body as listed below.

Technical Certificate No: Z600ANA1.022

Issued by:
Technology International (Europe) Limited
60 Shrivenham Hundred Business Park
Shrivenham, Swindon, SN6 8TY, UK

The Blackfin USB-LAN EZ-Extender contains ESD (electrostatic discharge) sensitive devices. Electrostatic charges readily accumulate on the human body and equipment and can discharge without detection. Permanent damage may occur on devices subjected to high-energy discharges. Proper ESD precautions are recommended to avoid performance degradation or loss of functionality. Store unused extender boards in the protective shipping package.

USB-LAN EZ-EXTENDER SCHEMATIC

INDEX

PREFACE

Thank you for purchasing the Blackfin[®] USB-LAN EZ-Extender[®], Analog Devices, Inc. extender board to the EZ-KIT Lite[®] evaluation system for the ADSP-BF533, ADSP-BF537, and ADSP-BF561 Blackfin processors.

Blackfin processors are embedded processors that support a Media Instruction Set Computing (MISC) architecture. This architecture is the natural merging of RISC, media functions, and digital signal processing characteristics towards delivering signal processing performance in a microprocessor-like environment.

EZ-KIT Lites and USB-LAN EZ-Extenders are designed to be used in conjunction with the CrossCore[®] Embedded Studio (CCES) and VisualDSP++[®] software development environments. The development environment facilitates advanced application code development and debug, such as:

- Create, compile, assemble, and link application programs written in C++, C, and USB-LAN EZ-Extender assembly
- Load, run, step, halt, and set breakpoints in application programs
- Read and write data and program memory
- Read and write core and peripheral registers
- Plot memory

To learn more about Analog Devices development software, go to <http://www.analog.com/processors/tools>.

Product Overview

The Blackfin USB-LAN EZ-Extender is a separately sold extender board that plugs onto the expansion interface of the ADSP-BF533, ADSP-BF537, or ADSP-BF561 EZ-KIT Lite evaluation system.

The extender board aids the design and prototyping phases of the ADSP-BF533, ADSP-BF537, or ADSP-BF561 processor targeted applications.

The board extends the capabilities of the evaluation system by providing a connection between the asynchronous memory bus of the Blackfin processor (asynchronous memory bank 3) and either a USB 2.0 or a 10/100 Mbps Ethernet device.

Please visit www.analog.com/EX1-USBLAN for additional information, including CCES support.

The following is a list of the Blackfin USB-LAN EZ-Extender interfaces.

- USB 2.0 interface:
 - PLX Technology NetChip 2272 device
 - USB driver and application code
 - USB logo certified
- Ethernet interface:
 - SMSC LAN 91C111 device supported on the ADSP-BF533 and ADSP-BF561 EZ-KIT Lites
 - IEEE802.3.AF compliant Power-Over-Ethernet (PoE) application on the ADSP-BF537 EZ-KIT Lite

- SMSC Media Independent Interface (MII) connector to evaluate different PHYs with the ADSP-BF537 EZ-KIT Lite
- Ethernet stack and application code
- No power supply required: derives power from the EZ-KIT Lite
- CE certified
- Dimensions: 3.13 in. (height) x 3.6 in. (width)

Before using any of the interfaces, follow the setup procedure in [“USB-LAN EZ-Extender Setup” on page 1-1](#).

Example programs are available to demonstrate capabilities of the Blackfin USB-LAN EZ-Extender board.

Purpose of This Manual

The *Blackfin USB-LAN EZ-Extender Manual* describes operation and configuration of the extender board’s components. A schematic and a bill of materials are provided as a reference for future Blackfin processor board designs.

Intended Audience

This manual is a user’s guide and reference to the Blackfin USB-LAN EZ-Extender. Programmers who are familiar with the Analog Devices Blackfin processor architecture, operation, and development tools are the primary audience for this manual.

Manual Contents

Programmers who are unfamiliar with Analog Devices processors can use this manual but should supplement it with other texts that describe your target architecture. For the locations of these documents, see [“Related Documents”](#).

Programmers who are unfamiliar with CCES or VisualDSP++ should refer to the online help and user’s manuals.

Manual Contents

The manual consists of:

- Chapter 1, [“USB-LAN EZ-Extender Interfaces”](#) on page 1-1
Provides basic board information.
- Chapter 2, [“USB-LAN EZ-Extender Hardware Reference”](#) on page 2-1
Provides information on the hardware aspects of the board.
- Appendix A, [“USB-LAN EZ-Extender Bill of Materials”](#) on page A-1
Provides a list of components used to manufacture the EZ-Extender board.
- Appendix B, [“USB-LAN EZ-Extender Schematic”](#) on page B-1
Provides the resources to allow EZ-KIT Lite board-level debugging or to use as a reference design. Appendix B is part of the online help.

What's New in This Manual

This is revision 2.2 of the *Blackfin USB-LAN EZ-Extender Manual*. The manual has been updated to include CCES information. In addition, modifications and corrections based on errata reports against the previous manual revision have been made.

For the latest version of this manual, please refer to the Analog Devices Web site.

Technical Support

You can reach Analog Devices processors and DSP technical support in the following ways:

- Post your questions in the processors and DSP support community at EngineerZone[®]:

<http://ez.analog.com/community/dsp>

- Submit your questions to technical support directly at:

<http://www.analog.com/support>

- E-mail your questions about processors, DSPs, and tools development software from **CrossCore Embedded Studio** or **VisualDSP++**:

Choose **Help > Email Support**. This creates an e-mail to processor.tools.support@analog.com and automatically attaches your **CrossCore Embedded Studio** or **VisualDSP++** version information and `license.dat` file.

- E-mail your questions about processors and processor applications to:

processor.support@analog.com or

processor.china@analog.com (Greater China support)

Supported Products

- In the **USA only**, call **1-800-ANALOGD** (1-800-262-5643)
- Contact your Analog Devices sales office or authorized distributor. Locate one at:
www.analog.com/adi-sales
- Send questions by mail to:
Processors and DSP Technical Support
Analog Devices, Inc.
Three Technology Way
P.O. Box 9106
Norwood, MA 02062-9106
USA

Supported Products

The Blackfin USB-LAN EZ-Extender is designed as an extender board to the ADSP-BF533, ADSP-BF537, and ADSP-BF561 EZ-KIT Lite evaluation systems.

Product Information

Product information can be obtained from the Analog Devices Web site and the online help.

Analog Devices Web Site

The Analog Devices Web site, www.analog.com, provides information about a broad range of products—*analog integrated circuits, amplifiers, converters, and digital signal processors.*

To access a complete technical library for each processor family, go to http://www.analog.com/processors/technical_library. The manuals selection opens a list of current manuals related to the product as well as a link to the previous revisions of the manuals. When locating your manual title, note a possible errata check mark next to the title that leads to the current correction report against the manual.

Also note, [MyAnalog](#) is a free feature of the Analog Devices Web site that allows customization of a Web page to display only the latest information about products you are interested in. You can choose to receive weekly e-mail notifications containing updates to the Web pages that meet your interests, including documentation errata against all manuals. [MyAnalog](#) provides access to books, application notes, data sheets, code examples, and more.

Visit [MyAnalog](#) to sign up. If you are a registered user, just log on. Your user name is your e-mail address.

EngineerZone

EngineerZone is a technical support forum from Analog Devices. It allows you direct access to ADI technical support engineers. You can search FAQs and technical information to get quick answers to your embedded processing and DSP design questions.

Use EngineerZone to connect with other DSP developers who face similar design challenges. You can also use this open forum to share knowledge and collaborate with the ADI support team and your peers. Visit <http://ez.analog.com> to sign up.

Related Documents

For additional information about the product, refer to the following publications.

1 USB-LAN EZ-EXTENDER INTERFACES

This chapter provides the setup procedures for both the Blackfin USB-LAN EZ-Extender and the EZ-KIT Lite (ADSP-BF533, ADSP-BF537 or ADSP-BF561) and describes the interfaces the extender supports.

The information is presented in the following order.

- [“USB-LAN EZ-Extender Setup” on page 1-1](#)
- [“USB 2.0 Interface” on page 1-3](#)
- [“Ethernet Interface” on page 1-4](#)
- [“Optional ADSP-BF537 EZ-KIT Lite Interfaces” on page 1-5](#)

USB-LAN EZ-Extender Setup

It is very important to set up all components of the system containing the Blackfin USB-LAN EZ-Extender, then apply power to the system. The following procedure is recommended for the correct setup.

Power your system after these steps are completed:

1. Read the applicable design interface section in this chapter—the text provides an overview of the interfac capabilities.
2. Read [“System Architecture” on page 2-2](#) to understand the physical connections of the extender board. For detailed information, refer to [“USB-LAN EZ-Extender Schematic” on page B-1](#).

USB-LAN EZ-Extender Setup

3. Remove any rubber feet that may be attached to the EZ-KIT Lite. Install the four nylon feet and screws provided with the USB-LAN EZ-Extender in place of the rubber feet, in the mounting holes of the EZ-KIT Lite's printed circuit board (PCB). Flip the EZ-KIT Lite upside down so that the three expansion headers (J1-3) are facing up.
4. Set the switches and jumpers on the USB-LAN EZ-Extender board. Use the block diagram in [Figure 2-1 on page 2-2](#) in conjunction with [“Jumper Settings” on page 2-3](#) and [“Switch Settings” on page 2-6](#).
5. Set the switches and jumpers on the EZ-KIT Lite board. If not already, familiarize yourself with the EZ-KIT Lite documentation and schematic drawings (see [“Product Information”](#)).

Compare the expansion interface signals of the USB-LAN EZ-Extender board with the EZ-KIT Lite signals to ensure there is no contention. For example, it may be necessary to disable other devices connected to the expansion interface of the processor and disable the push buttons on the EZ-KIT Lite.

6. Install the USB-LAN EZ-Extender on the EZ-KIT Lite via the three-connector expansion interface.
7. Configure any other interfacing boards; for example, another EZ-Extender board.

USB Software

For information on the USB software (host-side and device-side), refer to the readme text files in the `Examples` folder of the installation directory.

Ethernet Software

For information on the LAN software, refer to the readme text files in the `Examples` folder of the installation directory.

USB 2.0 Interface

The Blackfin USB-LAN EZ-Extender enables a connection between a USB 2.0 chip and Blackfin processor without any other programmable logic. The PLX Technology's NetChip 2272 device ties directly to the asynchronous memory bank 3 of the Blackfin processor. You can read from and write to the USB 2.0 controller by addressing the named memory bank directly.

You can reset the NetChip 2272 processor by asserting `LOW` these flag pins:

- `PF11` on the ADSP-BF533 processor
- `PF6` on the ADSP-BF537 processor
- `PF11` on the ADSP-BF561 processor

The flag pins can be used for push buttons or LEDs on the respective EZ-KIT Lite; consequently, you must make the proper changes to that EZ-KIT Lite. The switch settings required for each of the respective EZ-KIT Lites are described in the readme text files in the `Examples` folder of the installation directory. The readme file describes the USB software, source code, drivers, and explains how to run a USB-based application.

For correct switch settings, refer to the schematic drawing of the respective device.

Ethernet Interface

The USB IRQ line of the extender connects to PF10 on the ADSP-BF533/ADSP-BF561 processors and PF7 on the ADSP-BF537 processors. The flag pins can be used for push buttons or LEDs on the respective EZ-KIT Lites; consequently, you must make the proper changes to that EZ-KIT Lite.

When writing to and reading from the USB device using the EZ-KIT Lite, use memory addresses from [Table 1-1](#).

Table 1-1. USB Device Memory

| Device Connects to | Starting Address | Ending Address |
|------------------------|------------------|----------------|
| ADSP-BF533 EZ-KIT Lite | 0x2030 0000 | 0x2030 007F |
| ADSP-BF537 EZ-KIT Lite | 0x2030 0000 | 0x2030 007F |
| ADSP-BF561 EZ-KIT Lite | 0x2C00 0000 | 0x2C00 007F |

Ethernet Interface

The USB-LAN EZ-Extender allows you to connect a 10/100 Mbps Ethernet chip to a Blackfin processor. The SMSC LAN91C111 device ties directly to the asynchronous memory bank 3 of the processor. You can read from and write to the Ethernet controller by addressing the named memory bank directly.

You can reset the Ethernet device by asserting the board reset on the ADSP-BF533 and ADSP-BF561 EZ-KIT Lites. The reset connects to a supervisory reset circuit managed by the Analog Devices ADM708 IC. ADM708 also asserts a reset to the Ethernet device at power-up.

The Ethernet IRQ line connects to the PF9 flag pin of the ADSP-BF533 processor and PF9 of the ADSP-BF561 processor. The flag pins can be used for push buttons or LEDs on the respective EZ-KIT Lites; consequently, you must make the proper changes to that EZ-KIT Lite. The switch settings required for each of the respective EZ-KIT Lites are

described in the readme text files in the `Examples` folder of the installation directory. The readme file describes the LAN software, source code, drivers, and explains how to run an Ethernet application.

 For correct switch settings, refer to the schematic drawing of the respective device.

When writing to and reading from the Ethernet device using the EZ-KIT Lite, use memory ranges from [Table 1-2](#).

Table 1-2. LAN Device Memory

| Device Connects to | Starting Address | Ending Address |
|------------------------|------------------|----------------|
| ADSP-BF533 EZ-KIT Lite | 0x2031 0000 | 0x2031 FFFF |
| ADSP-BF561 EZ-KIT Lite | 0x2C01 0000 | 0x2C01 FFFF |

Optional ADSP-BF537 EZ-KIT Lite Interfaces

“[Power-Over-Ethernet](#)” and “[MII Interface](#)” are two optional interfaces of the ADSP-BF537 EZ-KIT Lite. A description of each interface is as follows.

Power-Over-Ethernet

When used in conjunction with the ADSP-BF537 EZ-KIT Lite, the Blackfin USB-LAN EZ-Extender allows you to power both the EZ-KIT Lite and extender via a 10/100 Mbps switch or a Midspan device that supports IEEE802.3.AF.

The ADSP-BF537 EZ-KIT Lite and extender must not be powered via the 7.5V supply when in Power-over-Ethernet (PoE) mode. You can make the appropriate jumper changes to the EZ-KIT Lite and extender, then connect the kit to the extender to power both boards via the switch or the

Optional ADSP-BF537 EZ-KIT Lite Interfaces

Midspan device. You must use a switch or a Midspan device that supports power via the data pairs. The PoE circuitry does not work if a Midspan device powers only over the spare pins.

[Table 1-3](#) shows a recommended Midspan device that supports both power over the spare pins and power over the data pairs.

Table 1-3. Midspan Device

| Power Sourcing Equipment | Manufacturer | Part Number |
|--------------------------|--------------|-------------|
| Midspan device | POWERDSINE 6 | PD-8006/AC |

Use the Ethernet connector on the EZ-KIT Lite for PoE applications. Power-over-Ethernet does not work properly if the Ethernet connector is used on the extender board. When in PoE mode, the blinking LEDs (LED1-6)] confirm successful power-up. Since PoE is intended as a simple demonstration of the power circuitry, you are not able to start a VisualDSP ++ session while in PoE mode.

Refer to [“Power Select Jumper \(JP1\)” on page 2-4](#) for the extender’s PoE settings. Refer to the *ADSP-BF537 EZ-KIT Lite Evaluation System Manual* for the EZ-KIT Lite’s PoE settings.

MII Interface

The Media Independent Interface (MII) allows you to evaluate different PHY devices with the ADSP-BF537 EZ-KIT Lite. A separately purchased PHY evaluation board connects directly to the USB-LAN EZ-Extender. You need to purchase the J2 connector and solder it in order to connect the two boards. The part numbers for the SMSC evaluation boards and J2 connector are shown in [Table 1-4](#).

Table 1-4. PHY Devices

| Part Description | Manufacturer | Manufacturer Part # |
|----------------------|----------------------|---------------------|
| J2 20 x 2 connector | AMP/TYCO ELECTRONICS | 787170-4 |
| MII evaluation board | SMSC | EVB185 |
| MII evaluation board | SMSC | EVB183 |

Optional ADSP-BF537 EZ-KIT Lite Interfaces

2 USB-LAN EZ-EXTENDER HARDWARE REFERENCE

This chapter describes the hardware design of the Blackfin USB-LAN EZ-Extender.

The following topics are covered.

- [“System Architecture” on page 2-2](#)
Describes the board configuration and explains how the board components interface with the processor and EZ-KIT Lite.
- [“Jumper Settings” on page 2-3](#)
Describes the on-board configuration jumpers.
- [“Switch Settings” on page 2-6](#)
Describes the on-board switches.

System Architecture

A block diagram of the Blackfin USB-LAN EZ-Extender is shown in Figure 2-1.

Figure 2-1. Block Diagram

Jumper Settings

Before using the Blackfin USB-LAN EZ-Extender, follow the setup procedure in “[USB-LAN EZ-Extender Setup](#)” on page 1-1.

Figure 2-2 shows the locations of all jumper headers. A two-pin jumper can be placed on the respective jumper header for different functionality. The following sections describe all possible jumper settings and associated functionality.

Figure 2-2. Jumper Locations

Jumper Settings

Power Select Jumper (JP1)

By default, the power select jumper, JP1, must have no jumpers on any of its pins. The jumpers can be used only when the extender is plugged onto an ADSP-BF537 EZ-KIT Lite (see [Table 2-1](#)).

Table 2-1. JP1 Settings

| Source of 5V Power | JP1 Setting |
|----------------------------|----------------------|
| EZ-KIT Lite power | No jumpers (default) |
| USB test mode (do not use) | JP1.1 and JP1.2 |
| Power-over-Ethernet | JP1.2 and JP1.3 |

When using the extender with an ADSP-BF533 or an ADSP-BF561 EZ-KIT Lite, you must not place any jumpers on JP1. Placing a jumper on JP1 can damage the extender board and/or the EZ-KIT Lite. You must power the ADSP-BF533/ADSP-BF561 EZ-KIT Lite and USB-LAN EZ-Extender with the 7.5V power supply provided with the EZ-KIT Lite.

When using the extender with an ADSP-BF537 EZ-KIT Lite with the Power-over-Ethernet feature, you must place a jumper between JP1 pin 2 and JP1 pin 3. You must power both the EZ-KIT Lite and USB-LAN EZ-Extender with the CAT5E Ethernet cable, which provides power over the signal pairs. The Ethernet cable must be plugged into the Ethernet connector of the ADSP-BF537 EZ-KIT Lite, but not the USB-LAN EZ-Extender. Use the 7.5V power supply provided with the EZ-KIT Lite.

When using the extender with an ADSP-BF537 EZ-KIT Lite without the Power-over-Ethernet, you must not place any jumpers on JP1. You must power both the EZ-KIT Lite and extender with the 7.5V power supply provided with the EZ-KIT Lite.

For an overview of the Power-over-Ethernet interface, refer to [“Power-Over-Ethernet” on page 1-5](#).

LAN Power Jumper (JP2)

The LAN power jumper, JP2, is used to power the SMSC 91C111 device with 3.3V (see [Table 2-2](#)). By default and in general, the jumper is plugged in for extra flexibility. You must make changes to JP2 only when no power is applied to the USB-LAN EZ-Extender and/or the EZ-KIT Lite.

Table 2-2. JP2 Settings

| Functionality | JP2 Setting |
|---------------------------|---------------------------|
| No power to the LAN91C111 | No jumper |
| All other cases | JP2.1 and JP2.2 (default) |

Link Jumper (JP3)

The link jumper, JP3, connects directly to the link status pin of the SMSC 91C111 device (see [Table 2-3](#)). The default setting is to keep JP3 unpopulated. When JP3 is populated, it sends a logic 0 or LOW to the input port used to convey the LINK status (EPHSR bit 14). For more information about populating the link jumper, refer to the SMSC LAN91C111 data sheet.

Table 2-3. JP3 Settings

| Functionality | JP3 Setting |
|-------------------------------------|---------------------|
| Logic low on 91C111 link status pin | JP3.1 and JP3.2 |
| All other cases | No jumper (default) |

Switch Settings

Before using the Blackfin USB-LAN EZ-Extender, follow the setup procedure in “USB-LAN EZ-Extender Setup” on page 1-1.

Figure 2-3 shows the locations of all switches. The following sections describe all possible switch settings and associated functionality.

Figure 2-3. Switch Locations

ADDR Enable Switch (SW1.1)

The address enable switch, SW1.1, is used to control output of the Blackfin address bus buffer (see [Table 2-4](#)). By default, the switch is set to ON. When SW1.1 is OFF, you cannot communicate to the USB or Ethernet processor. The address enable switch adds flexibility to the processors because you can turn the switch OFF when capacitive loading is an issue present with other peripherals on the EZ-KIT Lite.

Table 2-4. SW1.1 Settings

| Functionality | SW1.1 Setting |
|---------------------------------------|---------------|
| Blackfin address buffer (U1) enabled | ON (default) |
| Blackfin address buffer (U1) disabled | OFF |

FLAGS Enable Switch (SW1.2)

The flags enable switch, SW1.2, is used to control output of the Blackfin flags multiplexer (see [Table 2-5](#)). By default, the SW1.2 switch is set to ON. When SW1.2 is OFF, you cannot communicate to the USB or Ethernet processor. The flags enable switch adds flexibility to the extender—when the switch is OFF, the flags can be used for other peripherals on the EZ-KIT Lite.

Table 2-5. SW1.2 Settings

| Functionality | SW1.2 Setting |
|-------------------------------|---------------|
| FLAGS (U12) enabled | ON (default) |
| Blackfin FLAGS (U12) disabled | OFF |

USB IRQ Enable Switch (SW1.3)

The USB IRQ enable switch, SW1.3, is used to control a connection between the Netchip 2272 IRQ line and respective flag pin of the Blackfin processor (see [Table 2-6](#)). The switch connects the USB_IRQ line with PF10 on the ADSP-BF533/ADSP-BF561 processor and PF7 on the ADSP-BF537 processor. By default, the USB IRQ enable switch is ON. When SW1.3 is OFF, communication with the USB device cannot be established. The SW1.3 adds flexibility to the extender—when the switch is OFF, the flag can be used for other peripherals on the EZ-KIT Lite.

Switch Settings

Table 2-6. SW1.3 Settings

| Functionality | SW1.3 Setting |
|------------------|---------------|
| USB IRQ enabled | ON (default) |
| USB IRQ disabled | OFF |

Test Mode Enable Switch (SW1.4)

The test mode enable switch, SW1.4, is an internal test pin and should not be used (see [Table 2-7](#)). By default SW1.4 is OFF.

Table 2-7. SW1.4 Settings

| Functionality | SW1.4 Setting |
|--------------------|---------------|
| Test mode enabled | ON |
| Test mode disabled | OFF (default) |

Serial ROM Enable Switch (SW2.1)

The serial ROM enable switch, SW2.1, is used to control a connection between the LAN91C111 Ethernet chip and its serial ROM (U3) (see [Table 2-8](#)). When the switch is disabled, the Ethernet chip loads its Media Access Control (MAC) address from the serial ROM. By default SW2.1 is OFF. When the switch is ON, you cannot communicate with the provided Ethernet application code. The switch adds flexibility to the extender—you can modify the application code and generate another MAC address when SW2.1 is ON.

Table 2-8. SW2.1 Settings

| Functionality | SW2.1 Setting |
|---------------------|---------------|
| Serial ROM disabled | ON |
| Serial ROM enabled | OFF (default) |

IOS[2:0] Switch (SW2.2, SW2.3, SW2.4)

The `IOS[2:0]` bits on the Blackfin USB-LAN EZ-Extender are connected directly to the `IOS[2:0]` pins of the LAN91C111 Ethernet chip. By default, the switches are OFF. The `IOS[2:0]` pins are used in conjunction with the [Serial ROM Enable Switch \(SW2.1\)](#) to select between the pre-defined EEPROM configurations. For more information about the switches, refer to the SMSC LAN91C111 data sheet.

Switch Settings

A USB-LAN EZ-EXTENDER BILL OF MATERIALS

The bill of materials corresponds to “[USB-LAN EZ-Extender Schematic](#)” on page B-1.

| Ref. | Qty. | Description | Reference Designator | Manufacturer | Part Number |
