General Description

The HMC-C064 is a XOR/XNOR gate function design-ed to support data transmission rates of up to 50 Gbps. All input signals to the HMC-C064 are terminated with 50 Ohms to ground on-chip, and may be either AC or DC coupled. The differential outputs of the HMC-C064 may be either AC or DC coupled. Outputs can be connected directly to a 50 Ohm to ground terminated system, while DC blocking capacitors may be used if the terminating system is 50 Ohms to a non-ground DC voltage. The HMC-C064 operates from a single -3.3V DC supply, and is supplied in a hermetically sealed module with 1.85mm connectors.
