Item characteristics

Item condition:	As a spare part / defective :
Notes from the seller:	“ Tested for power on only. Unable to perform a complete testing. This unit is fitted with an EFRATOM FRS rubidium oscillator ”
Brand:	AUSTRON DATE EFRATOM
Manufacturer number:	2202 GPS

AUSTRON 2202 GPS primary frequency reference standard fitted with an EFRATOM FRS rubidium oscillator

Austron 2202 is a rack version of the Austron 2200 precision GPS receiver. It can be connected to a pc via RS232 connector on panel.

Features: dual 48Vdc power supply, internal rubidium oscillator, 10, 5, 1 mhz output

The receiver is complete of all its parts and it has been tested for power on only, a complete functional test could not be performed due to the missing of its antenna and pc connection, therefore it is sold "AS IS".

NO RETURN, NO REFUND ACCEPTED FOR THIS ITEM

The internal Efratom FSR rubidium oscillator has been tested separately off the equipment, and it has been found functional.

For its complete datasheet see last 3 pics. Last pic is referred to 2200 receiver, which is the display version, and it reports all time details.

No ops/svc manual or schematics available.

I can supply ops/svc manual with schematics of Austron 2201. Although it is a different equipment, some cards installed on 2001 are the same in the 2202: ANTENNA INTERFACE card, RS232 COMM card, SIGNAL PROCESSOR card, SIGNAL CONTROLLER card, DATA PROCESSOR card. This will be helpful to understand the circuitry and working

The equipment can be collected in Liberec free of charge, we accept Euro and Czech Crowns
