

Model 1281/1271

Selfcal Digital Multimeters

Model 1281/1271

Model 1281 — versatile precision for Standards Laboratory measurements

- ◆ Configurable for DCV, ACV, DCI, ACI and Ohms measurement
- ◆ Dual inter-compared 'Selfcal' references for enhanced confidence levels — stability better than 3 ppm/year over a $\pm 5^{\circ}\text{C}$ temperature range
- ◆ 8¹/₂-digit DCV and Ohms, 6¹/₂-digit ACV, 100% over-ranging
- ◆ 10 G Ω input impedance (up to 20 V DC) and 10 nV input sensitivity
- ◆ Special Ohms functions for ultra-high accuracy resistance measurements
- ◆ Range-to-range and function-to-function ratio measurements
- ◆ Simultaneous display of voltage and frequency

Model 1271 — speed and accuracy for Bench and ATE systems

- ◆ Configurable for DCV, ACV, DCI, ACI and Ohms measurement
- ◆ 'Selfcal' for stability over a 0°C to 50°C temperature range
- ◆ Simultaneous display of voltage and frequency — saving the cost of a separate frequency counter
- ◆ High-speed AC measurements — 6¹/₂ digit readings at 20 readings/second
- ◆ Special Ohms functions for high accuracy in-circuit measurements
- ◆ Comprehensive IEEE 488.2 interface

Accuracy

8¹/₂-digit scale length with usable last-digit resolution.

Stable enough to replace standard cells. Much easier to use.

100% over-ranging maintains 10 GΩ input impedance up to 20 V.

Functionality

Simultaneous readout of AC voltage/current and frequency saves the cost of an additional instrument in ATE systems.

Three separate input channels save the cost of an external scanner and allow function-to-function ratio measurements.

Special Ohms Functions: '2/4-Wire Ohms' eliminates errors due to lead resistance. 'True Ohms' eliminates errors due to thermal emfs. 'LoI Ohms' minimises self-heating in PRTs and allows in-circuit measurements with diode junctions in parallel. 'Ohms Guard' allows in-circuit resistance measurements and guards out leakage paths.

Ease-of-Use

Trade speed for resolution to optimise performance in every application.

Monitor functions give instant access to measurement uncertainties and secondary measurement parameters.

Math functions allow direct display of derived values.

Access secondary functions using no more than two front-panel keystrokes, followed if necessary by simple numeric entry.

Comprehensive self-test ensures maximum operability.

Model 1281/1271

Model 1281 — Working for Cal Lab Efficiency

While continuously striving to reduce measurement uncertainties, calibration laboratories are also under commercial pressure to reduce costs. Calibration equipment needs to be chosen not only for the uncertainty levels it can deliver, but also the range of uses to which it can be put. For accuracy coupled with versatility, no other standards laboratory DMM matches the superb performance of Wavetek's Model 1281.

The Model 1281 Can Replace:-

- ◆ *Standard 'Weston' Cells*
- ◆ *Null Detectors and μV Meters*
- ◆ *Kelvin Varley Dividers*
- ◆ *Thermal Transfer Standards*
- ◆ *Resistance Bridges*

At the heart of the Model 1281, two specially conditioned 10-volt zener references are continuously inter-compared to minimize drift rate. Coupled with the DC input amplifier's incredibly low $0.25 \mu\text{V}/^\circ\text{C}$ temperature coefficient, this allows the Model 1281 to achieve a 10-volt range stability over a 1 year period and $\pm 5^\circ\text{C}$ temperature range of 3ppm. That's as good as many Weston cells. And because the Model 1281's temperature coefficient is far superior to a Weston cell's, you don't have to worry about precision temperature control.

Add the fact that it offers exceptional 0.1 ppm ($\pm 2 \mu\text{V}$) single-range linearity from zero to 20 V, and you realise that the Model 1281 not only substitutes for Weston cells. It also doubles up as a highly sensitive null detector (with an input impedance $>10 \text{ G}\Omega$) and a Kelvin Varley divider.

The Model 1281 also features exceptional AC performance, with 1-year uncertainties significantly below 100 ppm up to 10 kHz on its 1 V to 100 V ranges. Its 'spot calibrated frequency' feature gives you even greater precision. Coupled with unique AC/DC transfer capabilities, this allows the Model 1281 to replace a conventional thermal transfer standard.

The Model 1281 also has unique Ohms measurement features. Its active 'Ohms Guard' terminal lets you guard out leakage current paths when measuring very high value resistors. And its 'LoI' mode prevent excessive self-heating in PRTs. The Model 1281's 2-input ratio function allows you to use it as a high performance automated bridge.

When you purchase the Model 1281 you're not only buying a multi-function DMM. You're also buying a multi-purpose instrument that's much easier to use than traditional cal lab equipment. Plus you'll benefit from more than 25 years of Wavetek experience in leading edge standards lab metrology.

Model 1271 — The Best in Precision ATE Performance

The Model 1271 is a true systems multimeter, capable of taking 1000 readings per second, operating over a wide ambient temperature range, and making in-circuit measurements. Yet it's more than accurate enough to satisfy the most demanding ATE requirements.

In addition to superb DC voltage capabilities, the Model 1271 features AC performance that is unsurpassed by any other systems DMM. Above 1kHz, it can take up to 20 high-accuracy 6¹/₂-digit AC readings per second. And simultaneous measurement of the input signal frequency saves the cost of a separate frequency counter.

ATE systems often cause problems for high-accuracy DMMs because of the large temperature rise that can occur in equipment racks. Not so for the Model 1271.

Using its Selfcal feature, you can maintain full measurement accuracy at temperatures as high as 35°C, without losing traceability. And you only need to perform Selfcal every 30 days or when the ambient temperature shifts more than 5°C. Compare that to other precision

systems DMMs that require an internal cal every 24 hours to maintain full specification.

The Model 1271 also excels at in-circuit testing. Its special Ohms functions allow accurate measurement of resistors even when they are part of complex resistor networks or when they have diode junctions in parallel. Its True-Ohms function eliminates thermal emfs and similar offset voltages in signal multiplexers. The availability of three separate input channels means that in many applications you won't even need to use an external signal multiplexer.

The Model 1271 is also built for safety. Two rear-panel mounted input channels keep signal cabling safely in the back of the cabinet, leaving the front-panel terminals free for manual testing or system debugging.

The Model 1271 – True Systems Capabilities

- ◆ 1000 Fully Formatted 5-1/2 Digit DC Readings/Second into Internal Memory
- ◆ 20 High-Accuracy AC Readings/Second above 1 kHz
- ◆ Extended Volt.Hz Envelope for High Voltage, High Frequency Signals
- ◆ High Accuracy In-Circuit Ohms Measurements
- ◆ Fully Traceable Measurement Over a Wide Operating Temperature Range

Notes for 1281 and 1271 Specification Tables :

[1] 100% over-range on all ranges (except 1kV DC & AC).

[2] Combined uncertainties to 95% minimum confidence level for max resolution in each function, normal read mode.

[3] Assumes 4-hour warm-up period.

[4] FS = 2 x Full Range.

[5] Selfcal required whenever the temperature moves more than $\pm 1^\circ\text{C}$ from the temperature at which the previous Selfcal was performed.

[6] Valid for 30 days after Selfcal, $\pm 1^\circ\text{C}$ of Selfcal temperature and within $\pm 15^\circ\text{C}$ (DCV and ACV) or $\pm 5^\circ\text{C}$ (other functions) of Autocal calibration temperature. Assumes Autocal at $23^\circ\text{C} \pm 5^\circ\text{C}$.

[7] Valid for signals $> 1\%$ FS.

[8] Assumes Transfer Mode is active.

[9] Max Volt.Hertz 3×10^7 .

[10] $> 300\text{V}$ add $\pm 0.0024 (R-300)^2$ ppmR.

[11] Valid within $\pm 10\%$ of calibrated RMS value and Spot Frequency.

[12] Instrument includes six Spot Frequencies per range that are normally shipped uncalibrated. Contact factory for Spot Frequency calibration prices.

[13] True Ohms mode available on 10 Ω to 100k Ω ranges.

[14] 10 Ω range available only in True Ohms mode.

[15] Calibrated at 23°C . Includes calibration uncertainty.

Ordering Information

Model 1281

Model 1281	8-1/2 Digit Selfcal Digital Multimeter (includes DCV, Ratio, Rear Inputs and IEEE-488.2 Interface)
Option 10	True RMS AC Converter
Option 20	2 wire and 4 wire Resistance Converter
Option 30*	Current Converter (only available with Option 20)
Option 50	10A Shunt
Option 70	Isolated Analog Output
Option 80	115V, 60Hz Line Operation
Option 90	Rack Mounting Kit

Model 1271

Model 1271	8-1/2 digit Selfcal Digital Multimeter (Includes DCV, Rear Input and IEEE-488.2 Interface)
Option 10	True RMS High Speed AC Converter
Option 20	2 wire and 4 wire Resistance Converter
Option 30*	Current Converter (only available with Option 20)
Option 40	Comprehensive Ratio
Option 50	10A Shunt
Option 70	Isolated Analog Output
Option 80	115V, 60Hz Line Operation
Option 81	115V, 50Hz Line Operation
Option 90	Rack Mounting Kit

* Requires Option 10 for AC Current Measurements

Model 1281/1271

Other Precision Instruments from Wavetek

4800-Series DMM Calibrators

DC & AC Voltage, DC & AC Current and Ohms. Calibration of DMMs to 8-1/2 digits. Two levels of precision.

Model 9500 Oscilloscope Calibrator

High accuracy calibration of analog and digital-storage oscilloscopes up to 1 GHz.

Model 9100 Multi-Product Calibrator

Calibration of over 14 different categories of general-purpose test and measurement equipment.

Model 1361 Precision VXIbus Digital Multimeter

DC & AC Voltage to 1000V plus Ohms. 4-1/2 to 6-1/2 digit resolution. 1000 readings/s.

Model 1362S Precision VXIbus Digital Multimeter

DC & AC Voltage to 300V plus Ohms. 4-1/2 to 6-1/2 digit resolution. 1000 readings/s.
