

4808, 4800 & 4805

THE DATRON INSTRUMENTS
RANGE OF MULTIFUNCTION
CALIBRATORS

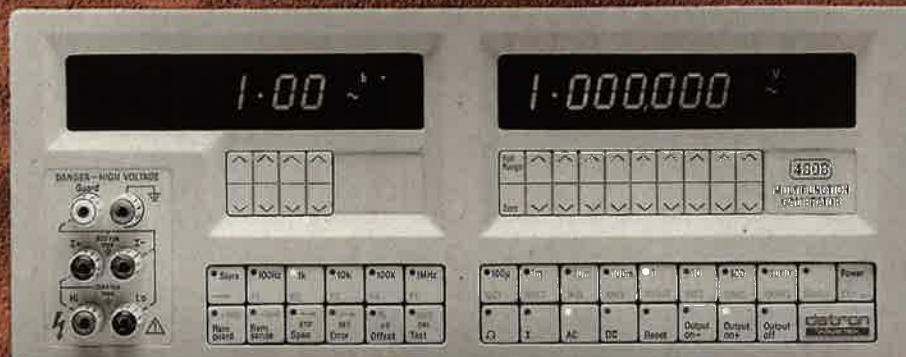

Datron Instruments is the technological leader in the design and manufacture of precision electronic measurement equipment. Offering a range of precision DMMs, programmable DMM calibrators and calibration standards, Datron is renowned worldwide for providing innovative solutions to today's high accuracy measurement problems.

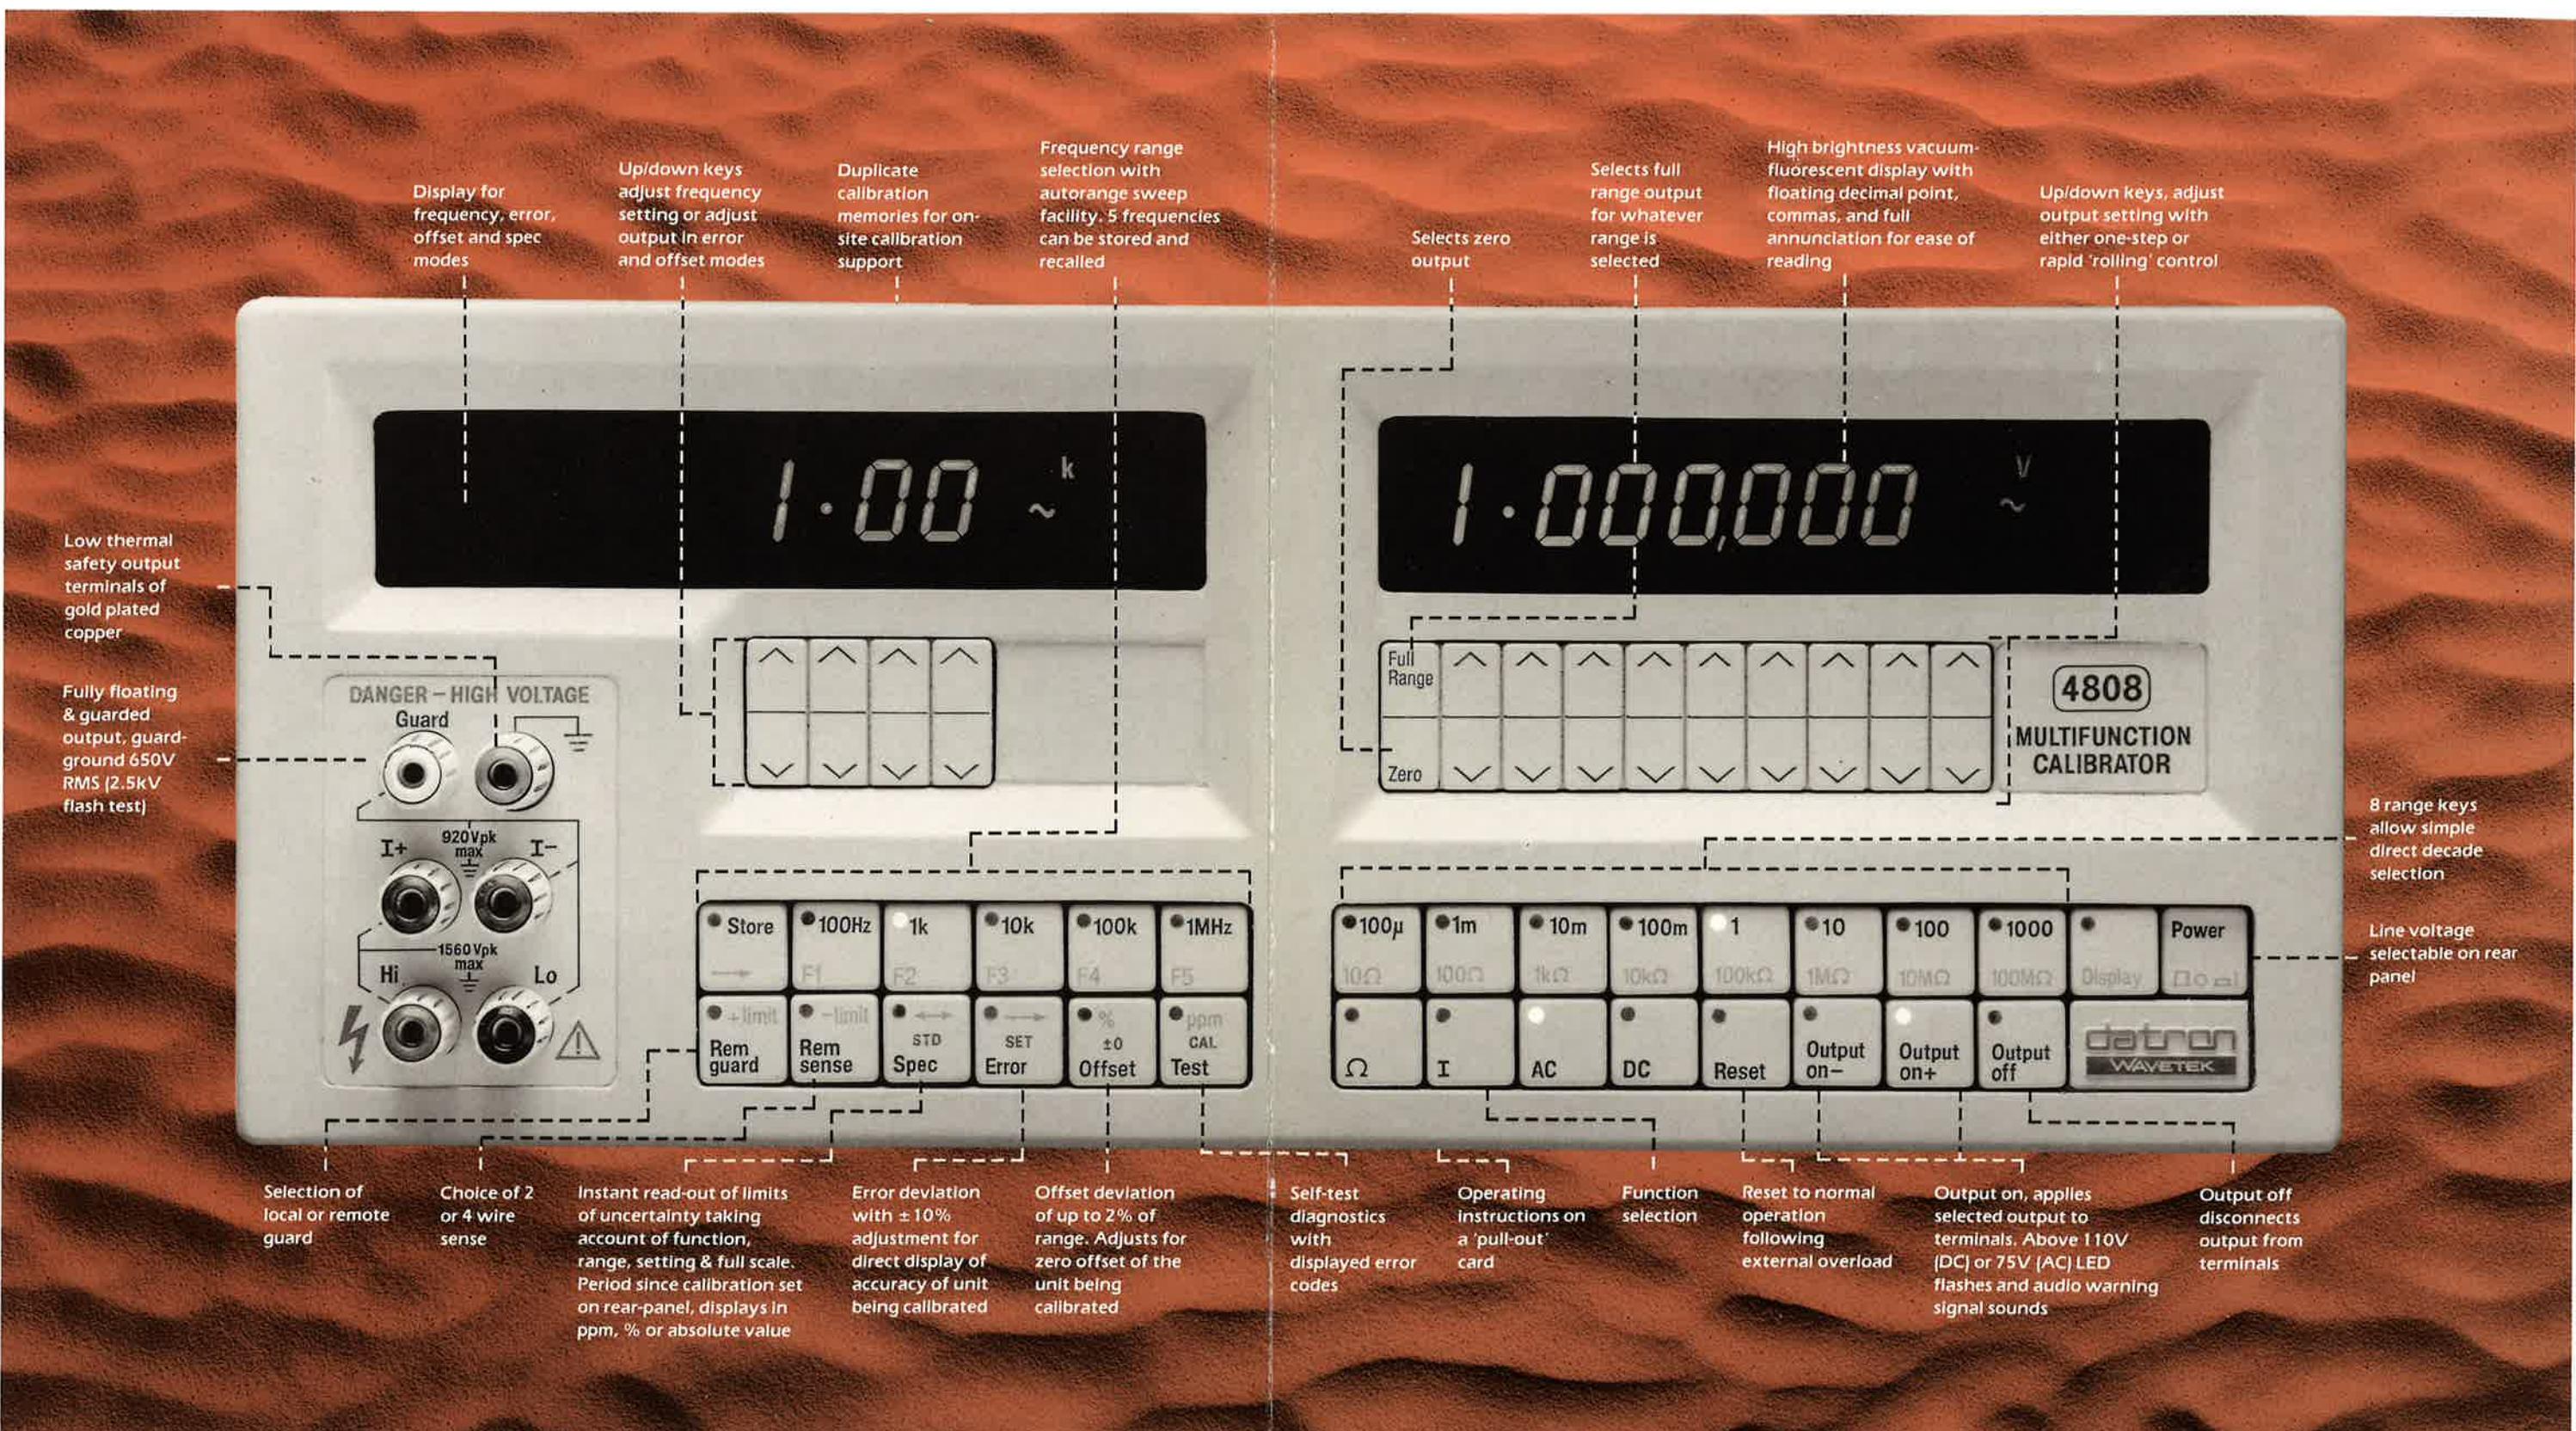

- **4808 gives the ultimate in Standards Laboratory performance**
- **4800 for meter calibration up to 7½ digit accuracy**
- **4805 for meter calibration up to 5½ digit accuracy**

Each model offers programmable DC and AC Voltage, DC and AC Current and Resistance outputs at a level of precision suitable for calibration of DMMs and other DC/LF instrumentation. A summary of their capabilities is shown below.

ALL THREE MODELS OFFER:

- Unique price/performance levels
- Integral high power 1000V DC and AC amplifier for widest workload coverage
- Shadow calibration memories for on-site calibration support
- Portocal automated calibration system compatibility
- Ease of use

Used either as a component in an automated calibration system or as a standalone bench instrument, the Datron range of Multifunction calibrators offers the most cost-effective solution to today's calibration problems. Initial purchase costs are reduced by the inclusion of a full capability 1000V DC and AC power amplifier in the calibrator chassis, enabling a single unit to cover the widest possible calibration workload. The options available on the 4808 and 4800 allow an instrument to be configured as DCV only, ACV only or multifunction, enabling configuration of a calibrator that meets today's requirements while retaining the flexibility to upgrade capabilities as requirements change.

Calibration Support

The 4808, 4800 and 4805 offer an innovative solution to the problems of calibration support. Routine re-calibration may be carried out in the traditional way, i.e. transporting the unit to a standards laboratory equipped with suitable measurement standards, but this approach leads to substantial calibrator downtime and physical transportation can compromise the integrity of the calibration. The 4808, 4800 and 4805 were designed with two in-

dependent calibration memories, so they can be calibrated in-situ by comparison with portable transfer standards. At the start of the re-calibration process, a front panel keypress sequence or IEEE-488 bus command copies the calibration data for each range of each function to 'shadow', or duplicate calibration memory. The re-calibration is performed, which updates the main calibration memory, but the original calibration constants held in 'shadow' memory are used until the transfer standard is returned to the standards laboratory to close the measurement loop. When loop closure confirms that the re-calibration was successful, operation is switched to the newly-generated calibration data. This technique avoids subjecting the calibrator to the rigours of transportation while avoiding the inconvenience of calibrator downtime associated with the traditional approach. The integrity of the calibration is ensured since all ranges of all functions are measured at the instrument's terminals and compared directly with calibration standards.

4808, 4800 & 4805

THE DATRON INSTRUMENTS RANGE OF MULTIFUNCTION CALIBRATORS

Bench Operation

When used as a standalone bench operated calibrator, each 4808, 4800 and 4805 offers ease of use, high reliability, high performance and unique functionality. All three models share the same easy-to-use front panel interface that uses high brightness seven segment vacuum fluorescent displays and ergonomically designed keyboard using pushbuttons designed to give a high level of tactile feedback. Designed with operator safety in mind, specially designed safety terminals guard against contact with live parts. Selection of potentially lethal output voltages requires a fixed sequence of keystrokes, and is accompanied by a continuous, audible alarm for as long as dangerous voltages are present at the output terminals.

	4808 with Options 10.20.30.40.50 and 60 (4600 Transconductance Amplifier)	4800 with Options 10.20.30.40.50 and 60 (4600 Transconductance Amplifier)	4805 with Option 60 (4600 Transconductance Amplifier)
DCV Ranges 1 Year Total Accuracy	100µV to 1100V 4.6ppm	100µV to 1100V 8.5ppm	100µV to 1100V 45ppm
ACV Ranges Frequency Range 1 Year Total Accuracy	1mV to 1100V 10Hz to 1MHz Spot Frequency Calibration 40ppm	1mV to 1100V 10Hz to 1MHz 130ppm	1mV to 1100V 10Hz to 100kHz 450ppm
Ω Ranges 1 Year Total Accuracy	10Ω to 100MΩ 13ppm	10Ω to 100MΩ 19ppm	10Ω to 100MΩ 29ppm
DCI Ranges 1 Year Total Accuracy	100µA to 11A 55ppm	100µA to 11A 85ppm	100µA to 11A 170ppm
ACI Ranges Frequency Range 1 Year Total Accuracy	100µA to 11A 10Hz to 5kHz (20kHz on 10A Range) Spot Frequency Calibration 190ppm	100µA to 11A 10Hz to 5kHz (20kHz on 10A Range) 250ppm	100µA to 11A 10Hz to 5kHz (20kHz on 10A Range) 700ppm

System Operation

The 4808, 4800 and 4805 are also ideally suited to use in a computer controlled automated system. Featuring a wide operating temperature range and very low temperature coefficient, they can be mounted in a standard ATE rack with minimal degradation in accuracy. Rapid response to programming commands over the standard IEEE-488 interface and fast settling increase system throughput. All internal signal, guard and ground connections are programmable over the bus, eliminating the need for complex switching arrangements external to the calibrator. Automation of the calibration process improves the reliability and repeatability of measurement while freeing skilled calibration engineers from tedious and repetitive tasks. In addition, automation of tasks such as inventory management, data reduction and

analysis, calibration cycle management etc. are simplified. In short, it enables the calibration department to use statistical process control (SPC) techniques to more effectively manage the calibration environment. This approach can improve the quality and traceability of the measurement process while substantially reducing the operating and support costs of the system.

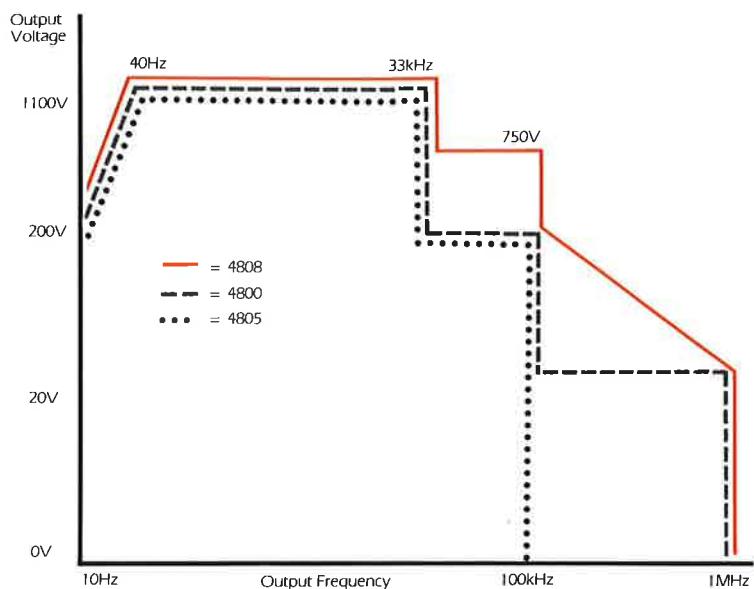

Reliability and Support

The 4808, 4800 and 4805 have been designed and built to the most exacting quality standards. To optimise serviceability, internal self diagnostic routines continuously monitor instrument status. These indicate a wide range of failure conditions — from

output overloads to power supply failures and over-temperature. In addition, a selftest routine can be selected at any time to provide rigorous operational checks, and if service does become necessary, simple access is provided and all major circuits are on plug-in cards.

All three models carry the comprehensive Datron warranty. This, together with the complete backup support and excellent recalibration facilities provided in our service centers worldwide, means that customers receive the high level of service they have come to expect from Datron Instruments.

4808, 4800 and 4805 Volts/Hertz Capabilities

Ordering Information

Models 4808/4800 Multifunction Calibrators:

Option 10 DCV function to 200V.
Option 20 ACV function to 200V.
Option 30 Integral 1000V amplifier for ACV and/or DCV functions. Requires either Option 10, Option 20 or both.

Option 40 Current Converter for DCI and ACI functions. DCI capability requires Option 10, ACI capability requires Option 20.

Option 50 Resistance function.

Option 60 Range Extender to 11A DCI and ACI. Includes 4600 Transconductance Amplifier and all necessary cabling. Requires Option 40.

Option 90 Rack Mount Kit.

Model 4805 Multifunction Calibrator:

Option 60 Range Extender to 11A DCI and ACI. Includes 4600 Transconductance Amplifier and all necessary cabling.

Option 90 Rack Mount Kit.

Model 4600 Transconductance Amplifier:

Option 90 Rack Mount Kit.
440151 Slave Model Lead Kit.
440154 Current Output Lead Kit.

4808, 4800 & 4805

THE DATRON INSTRUMENTS RANGE OF MULTIFUNCTION CALIBRATORS

General Specifications

Line Supply:

110/120/220/240V \pm 10%, 48Hz to 62Hz

Power Consumption:

370VA normal, 660VA full power

Operating Temperature:

0°C to + 50°C

Storage Temperature:

- 40°C to + 70°C

Dimensions (H x W x D):

178mm (7") x 455mm (17.9") x 563mm (22.2")

Weight:

36kg (80lbs)

Safety:

Designed to UL1244, IEC348, IEC1010, BS4743

Warranty:

1 year

Due to a process of continuous refinement and improvement, Datron Instruments reserves the right to change materials, components and specifications without notice.

THE DATRON INSTRUMENTS
RANGE OF MULTIFUNCTION
CALIBRATORS

**EXPANDED
PERFORMANCE
SPECIFICATIONS**

The Total Uncertainty specifications listed for the 4808, 4800 and 4805 specify the traceable accuracy of each range of each function available at the calibrator's output terminals and include the traceability of Datron's factory calibration system. These specifications are valid for new units, or units re-calibrated at the factory. If calibration is performed using standards with different traceable uncertainties, the Total Uncertainty specifications listed will no longer ap-

ply. Therefore, the specification tables following detail the performance of the 4808, 4800 and 4805 separately from the traceability of the Datron factory calibration system. When different calibration standards are used, simply substitute their uncertainties in place of the column headed 'Calibration Uncertainty' and combine them with the listed calibrator 'Accuracy Relative to Calibration Standards' specifications.

FUNCTION	RANGE	FREQUENCY Hz	4808 Accuracy Relative to Calibration Standards ± [ppm OUTPUT + ppmFS] ^[1]				Calibration Uncertainty (ppm Output)	Temperature Coefficient (ppm/°C)

General Specifications

Line Supply:

110/120/220/240V \pm 10%, 48Hz to 62Hz

Power Consumption:

370VA normal, 660VA full power

Operating Temperature:

0°C to +50°C

Storage Temperature:

-40°C to +70°C

Dimensions (H x W x D):

178mm (7") x 455mm (17.9") x 563mm (22.2")

Weight:

36kg (80lbs)

Safety:

Designed to UL1244, IEC348, IEC1010, BS4743

Warranty:

1 year

Ordering Information

Models 4808/4800 Multifunction Calibrators:

Option 10 DCV function to 200V.
Option 20 ACV function to 200V.
Option 30 Integral 1000V amplifier for ACV and/or DCV functions. Requires either Option 10, Option 20 or both.

Option 40 Current Converter for DCI and ACI functions. DCI capability requires Option 10, ACI capability requires Option 20.

Option 50 Resistance function.
Option 60 Range Extender to 11A DCI and ACI. Includes 4600 Transconductance Amplifier and all necessary cabling. Requires Option 40.

Option 90 Rack Mount Kit.

4808, 4800 & 4805

EXPANDED PERFORMANCE SPECIFICATIONS

Model 4805 Multifunction Calibrator:

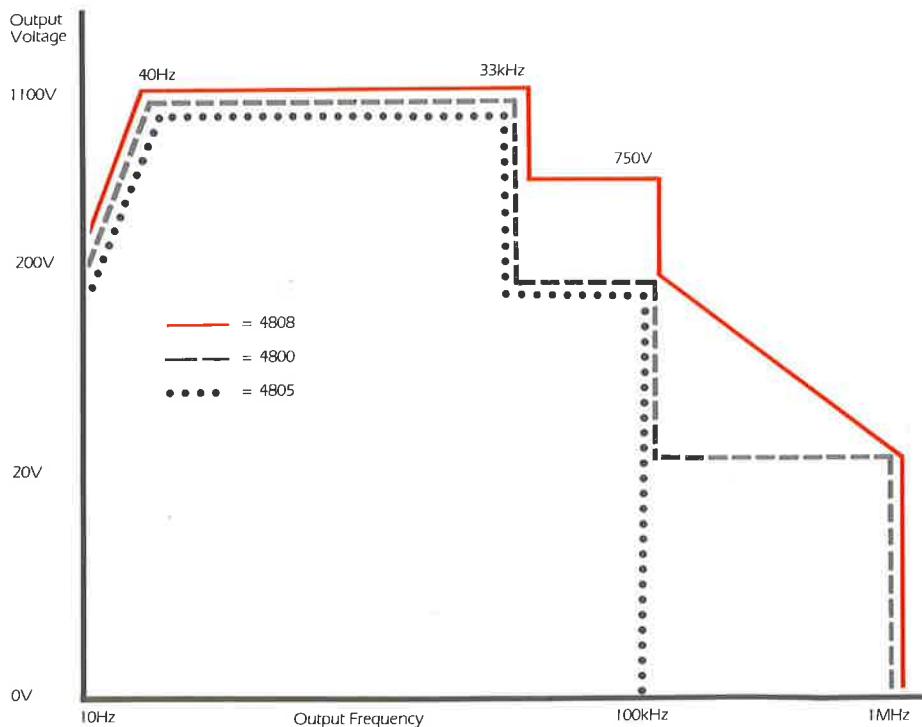

Option 60 Range Extender to 11A DCI and ACI. Includes 4600 Transconductance Amplifier and all necessary cabling.

Option 90 Rack Mount Kit.

Model 4600 Transconductance Amplifier:

Option 90 Rack Mount Kit.
440151 Slave Model Lead Kit.
440154 Current Output Lead Kit.

4808, 4800 and 4805 Volts/Hertz Capabilities
