

Field-Effect Transistors

Jim Bechtold/Editor

Introduction

The field-effect transistor (or FET) is a three-terminal device that can be used in a multitude of applications ranging from signal amplification to logic and memory functions. The FET's basic principle involves using voltage between two terminals to control the current flowing in the third terminal. In this way a FET can be the basis for an amplifier or a switch. There are two fundamental types of FETs to look at, the junction field-effect transistor (JFET) and the metal-oxide-semiconductor FET, or MOSFET.

The name field-effect transistor arises from the fact that current flow between two of the device terminals is controlled by an electric field, which in turn is established by a voltage applied to the third terminal. FETs are also called unipolar transistors because current is conducted by charge carriers (electrons or holes) flowing through one type of semiconductor material (either *n*-type or *p*-type). This is in contrast to bipolar transistors where current passes through both *n*-type and *p*-type semiconductor materials in series.

JFET Physical Operation

Figure 1 shows the basic structure (simplified and idealized) of the *n*-channel JFET. It consists of a slab of *n*-type silicon with *p*-type silicon diffused on both sides. The *n* region is called the channel, while the *p*-type regions are electrically connected together and form the gate. Metal contacts are made to both ends of the channel, with the terminals called the source (S) and the drain (D). Similarly, a metal contact is made to the

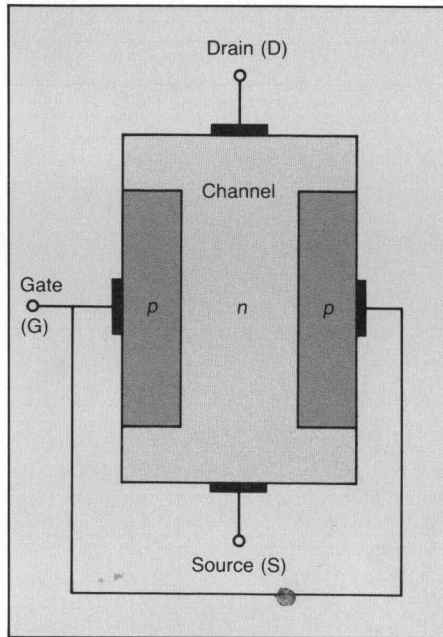

Figure 1. Basic structure of *n*-channel JFET.

p-type region to provide the gate terminal (G). The *p*-channel FET works in a similar manner except for a reversal of polarities of all currents and voltages.

Figure 2 shows the circuit symbol for the *n*-channel JFET. Note that the gate line has an arrowhead whose direction indicates the type of the device. The arrow points inward if the substrate is made from *n* material, and points away from the substrate if made from *p* material.

It can be seen from Figure 1 that the JFET has one *pn* junction, the gate-to-channel junction. In almost all applications this junction will be reverse-biased and hence only a very small leakage current will flow in the gate terminal. This also means that the input impedance looking into the gate will be very high.

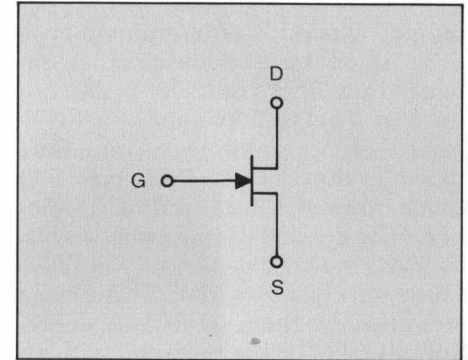

Figure 2. Circuit symbol for *n*-channel JFET.

Although only one *pn* junction exists, operation of the JFET is dependent on establishing different values of reverse bias at the two ends (source and drain) of this junction. Because of this, references are sometimes made to gate-to-drain junction and gate-to-source junction.

Comparisons

Referring to Figure 3, you see that a vacuum tube is voltage sensitive. By controlling the voltage on the grid, current flow through the tube can be regulated. Very little current flows in the grid circuit; that is, a vacuum tube has a very high input impedance. A bipolar transistor, however, responds to current flow in its base-emitter circuit. Appreciable current must flow to saturate the transistor. Thus the input impedance is rather low. Notice also that the tube needs a bias more negative than its cathode, whereas the base voltage on a transistor is somewhere between the emitter and collector. The JFET has a gate, source, and drain. These are analogous to the base, emitter, and collector, respectively, on a bipolar transistor and also to the grid, cathode, and anode, re-

spectively, on a vacuum tube. The FET responds to the electric field created by the voltage on the gate. Varying the gate voltage will vary current flow ("channel current") between source and drain.

Enhancement vs. Depletion

A significant difference between JFETs and MOSFETs is that all JFETs are of the depletion type while MOSFETs can be either depletion or enhancement type.

Simply stated, enhancement-type FETs must have their channel enhanced (or improved) to obtain conduction. That is, they must be actively biased on to promote current flow through the device. Zero bias will cause minimum current flow. Depletion FETs are just the opposite — with 0V bias, maximum current will flow. These two types of MOSFETs can be identified by their symbol. A depletion MOSFET is diagrammed with an unbroken line, indicating the presence of a channel. That is, conduction will occur with zero bias. An enhancement MOSFET has its channel diagrammed with a broken line, signifying that no channel exists in the enhancement device until a positive voltage improves or enhances the channel.

FETs can be made out of *p*-doped (positive) material or *n*-doped (negative) material, just as bipolar transistors can be PNP or NPN. The direction of the arrow on the symbol indicates *p* or *n*. The arrow points to *n*-channel, just as in the bipolar case. That is, in a PNP bipolar transistor the arrow points to *n* material (the base). In an NPN transistor the arrow points toward the emitter (again *n* material).

In FETs the arrow points inward if the substrate is made from *n* material (and points away from the substrate if made from *p* material). See Figure 4.

Depletion-Type MOSFET Physical Operation

Figure 5 shows the basic structure (simplified and idealized) of an *n*-channel depletion-type MOSFET. As shown, the *n*-channel device is formed on a *p*-type silicon substrate.

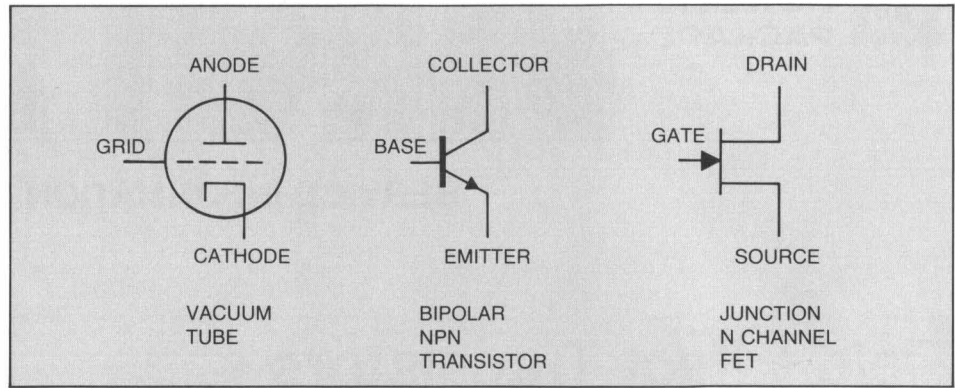

Figure 3. Vacuum tube, bipolar transistor and JFET.

| BI POLAR TRANSISTORS | FIELD EFFECT TRANSISTORS | | | |

| | | ENHANCEMENT | DEPLETION | |
| | N CHANNEL | | | |
| | P CHANNEL | | | |

Figure 4. Transistor types.

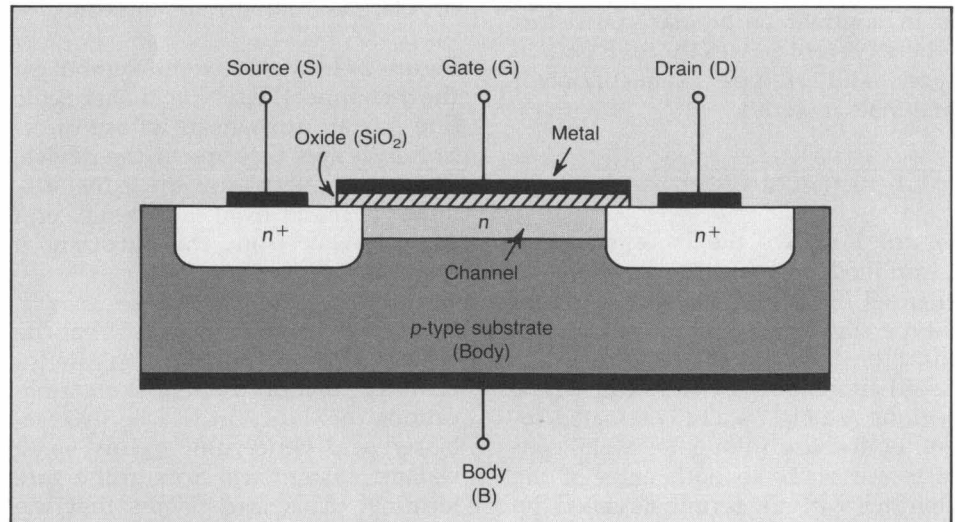

Figure 5. Basic structure of *n*-channel depletion-type MOSFET.

The two heavily doped n^+ wells form low-resistance connections between the ends of the n channel and the metal contacts of the source (S) and the drain (D). A thin oxide layer is grown on the surface of the channel, and metal (aluminum) is deposited on it to form the gate (G). At this point it should be clear that the name MOS is derived from the structure of the device.

Whereas the JFET is controlled by the gate-to-channel pn junction, this is not the case in the MOSFET. Here the oxide layer acts as an insulator that causes the gate current to be negligibly small (10^{-12} to 10^{-15}). This gives the MOS transistor its extremely high input resistance under all conditions.

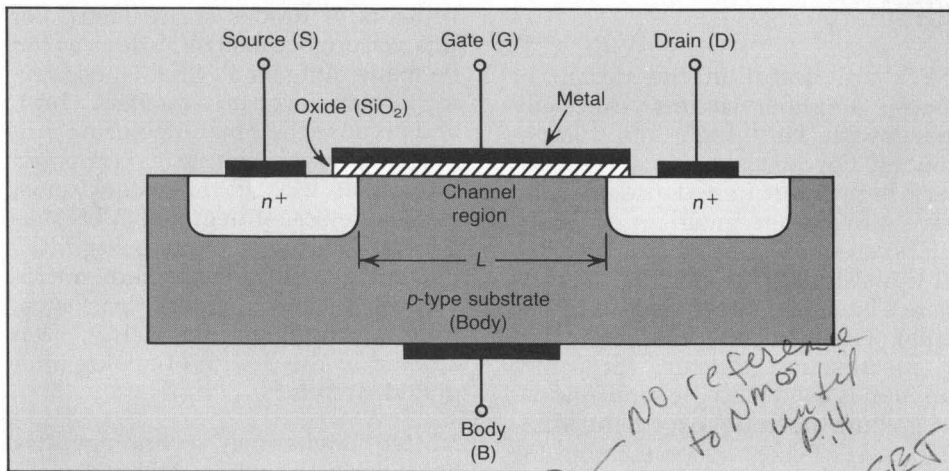

Figure 7. Basic structure of enhancement-type NMOS transistor.

representing the gate electrode and the line representing the channel denotes the insulating oxide layer. The arrow on the substrate line in the forward direction of the substrate-to-channel pn junction and hence indicates the polarity of the device (n -channel in this case).

In many applications the substrate is electrically connected to the source. Since the drain voltage will be positive with respect to the source, the substrate-to-channel junction will always be reverse-biased and hence the substrate current will be almost zero.

Figure 6b is a simplified symbol of Figure 6a. Note that the polarity of the device is indicated by the direction of the arrowhead on the source line; the arrowhead points in the normal direction of current flow in the source lead.

Enhancement-Type MOSFET Physical Operation

The enhancement-type MOSFET shown in Figure 7 is the most widely used device in the design of MOS integrated circuits. As shown in Figure 7, the structure looks quite similar to that of the depletion device shown in Figure 5, with one exception: there is no channel.

It follows that if the gate is left floating, or if the voltage between the gate and source equals zero, the path from drain to source includes two series diodes back-to-back, which means that no drain current can flow. To cause current to flow from drain to

source we first have to create an n channel. This can be done by applying a positive voltage between the gate and source that is greater than the positive threshold voltage of the particular MOSFET.

Figure 8 shows the circuit symbol of the n -channel enhancement-type MOSFET. The only difference between this symbol and that of the depletion-type shown in Figure 6 is that here the channel is represented by a broken line, which signifies that no channel exists in the enhancement device.

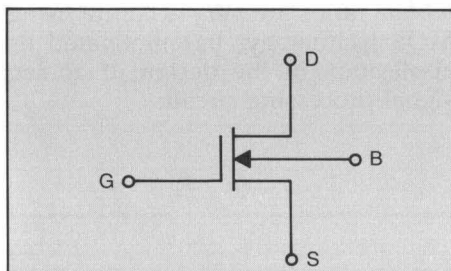

Figure 6a. Circuit symbol for the n -channel depletion-type MOSFET.

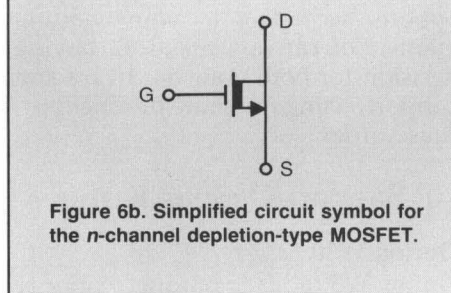

Figure 6b. Simplified circuit symbol for the n -channel depletion-type MOSFET.

Figure 6. Simplified circuit symbol for depletion-type MOSFET.

As mentioned before, the depletion-type MOSFET operates much like the JFET. The fundamental difference is that in the JFET the channel is depleted by reverse-biasing the gate-to-channel junction. In the MOSFET control of the channel width is effected by an electric field created by the voltage on the gate. The more negative the gate the less current flows.

Figure 6a shows the circuit symbol of the n -channel depletion-type MOSFET. Note that the space between the line

Figure 8. Simplified circuit symbol for the enhancement-type MOSFET.

Summary

JFETs are useful in the design of special amplifier circuits, especially those with very high input impedances. For instance, op amps with very high input impedances usually have a first stage made up of JFETs. JFETs can also be combined with bipolar transistors to provide high-performance linear circuits (called BIFET circuits). The JFET structure employing a metal-semiconductor (Schottky) junction is used with the semiconductor gallium arsenide to form the MESFET, a JFET-like device suitable for application in amplifiers and logic circuits in the gigahertz range. The JFET is also used as an analog switch and in a variety of other analog circuit applications.

Digital logic and memory functions can be implemented with circuits that exclusively use MOSFETs (that is, no

resistors or diodes are needed). For this reason, because MOS devices can be made quite small (that is, occupying a small silicon area on the IC chip), and because their manufacturing process is relatively simple (as compared to that of bipolar transistors), most very-large-scale-integrated (VLSI) circuits are currently made using MOS technology. Examples include microprocessor and memory packages. MOS technology has also been applied to the design of analog integrated circuits.

NMOS (*n*-channel) technology has been perfected where faster devices are occupying smaller silicon area. The other dominant VLSI technology is complementary-symmetry MOS (or CMOS). As the name implies, CMOS circuits use both *n*-channel and *p*-channel devices on the same IC chip. CMOS logic circuits are currently quite popular and are sometimes re-

ferred to as the "ideal" logic family. Moreover, CMOS is capable of implementing a variety of analog circuit functions; therefore, CMOS is the technology of choice whenever analog and digital functions are to be implemented on the same VLSI circuit chip.

MOS transistors have very high input impedance and consume little static power. This makes them quite useful in the design of micropower circuits, both digital and linear. Needless to say, the MOS transistor is also very useful in the design of amplifiers with extremely high input impedance. MOS transistors can also be used as analog switches. This, together with the ability to manufacture capacitors whose ratios are very accurate using MOS technology, has motivated its application in the design of analog signal-processing circuits. □

Lock-in Low Cost of Ownership for Your HP Instrument Products

Terry Owen/Hewlett-Packard
Product Support Division

What factors do you consider when purchasing an instrument product? Certainly, instrument performance is important. Another factor to consider is cost of ownership. What will it cost to keep the instrument operating at peak performance throughout its useful life?

Hewlett-Packard instruments are known for their quality and performance. Your HP sales representative can help you find the instrument products uniquely suited to your test and measurement needs. He can also ensure that you enjoy low cost of ownership with HP Support Options.

HP Support Options are a family of services designed for purchase with hardware products. They add support services to product warranty to provide you with HP's quality support for an extended period of time. These competitively priced and easily ordered services demonstrate HP's commitment to quality and low cost of ownership.

Ensure Low Cost of Ownership

HP Support Options offer you excellent support value. Each option is competitively priced and more economical than per-incident services. By purchasing HP Support Options, you benefit by locking-in your cost savings for an extended period. You also save time and money by eliminating unexpected expenses and the associated paperwork.

Maximize Your Hardware Uptime

HP Support Options extend the benefits of warranty coverage. Your products enjoy "head of the queue" priority service from highly trained, factory-backed service technicians. With HP Support Options, you're back in business fast.

Simplify Your Purchase Decision

HP Support Options are designed to fit with your hardware purchase pro-

cess. HP quotes and invoices these options according to your requirements. You can now make one buying decision for both your hardware and support, using the same product purchase order.

HP Support Options Features

Option W30

Option W30 adds to product warranty to provide you with a total of three years of customer return repair service from the time of hardware delivery.

Under Option W30, HP provides all labor, parts, and materials necessary to maintain your product in good operating condition. In addition, HP will perform preventive maintenance and install factory-recommended improvements and modifications, when appropriate, at the time of product repair.

Option W31

Option W31 offers you the convenience of quick, on-site service at an economical price. Option W31 adds to product warranty to provide you

with a total of three years of next-day on-site repair coverage from the time of hardware delivery.

Under Option W31, HP provides all labor, parts and materials necessary to maintain in good operating condition products covered at your designated site. This option is limited to products located within 200 miles of an HP Support Responsible Office. After receipt of your service request, HP responds within the next HP working day. HP also performs preventive maintenance and installs factory-recommended improvements and modifications, when appropriate, at the time of product repair.

Option W32

Hewlett-Packard is known worldwide for the quality, reliability, and integrity of its measurements. HP

calibration services keep your HP instruments operating with precision. Option W32 provides three years of customer return calibration service from the time of hardware delivery. This coverage includes scheduled calibration at HP's recommended calibration cycle, as well as calibration after a required repair performed by HP.

Option W32 is available on hundreds of HP instruments, offering you superior calibration that leads to confidence in measurements. HP manages the recommended calibration cycle, providing you with dependable, thorough calibration to verify that your equipment meets the product's published specifications.

All measurement made by HP in performing calibrations are traceable to

the appropriate national standards organization. HP makes any adjustment necessary for the instrument to meet specifications and performs preventive maintenance. We issue a Certificate of Calibration and place a calibration decal on the instrument, indicating the calibration date and the next calibration due date.

Specify HP Support Options with Your Next Order

HP Support Options are available for most HP test and measurement products. They are available only at the time of hardware purchase, and allow you to extend the benefits of warranty coverage and lock in low support costs. Ask your HP sales rep. to include HP Support Options coverage on your next hardware order. □

Safety-Related Service Notes

Service notes from HP relating to personal safety and possible equipment damage are of vital importance to our customers. To make you more aware of these important notes, they are printed on paper with a red border, and the service note number has an "-S" suffix. In order to make you immediately aware of any potential safety problems, we are highlighting safety-related service notes here with a brief description of each problem. Also, in order to draw your attention to safety-related service notes in the service note index, each appropriate safety-related service note is highlighted with a contrasting color.

Safety Service Note for HP 5450X and 165X Products

A safety service note has been issued for the HP 54501A, 54502A, 54503A, 54504A, 1650A, 1650B, 1651A, 1651B and 1654B products in the following serial number ranges:

The 54510A, 1652B and 1653B are not affected by this service note.

This service note indicates that units falling in the above serial number

| MODEL # | PSSN NUMBER | STARTING S/N | ENDING S/N |
|---------|-------------|--------------|------------|
| 1650A | 1650A-12-S | 2814A04504 | 2814A04573 |
| 1650B | 1650B-04-S | 2924A00461 | 2924A00890 |
| | | 2945A00891 | 2945A02066 |
| 1651A | 1651A-12-S | 2814A02437 | 2814A02470 |
| 1651B | 1651B-04-S | 2924A00241 | 2924A00520 |
| | | 2945A00521 | 2945A01220 |
| 1654B | 1654B-03-S | 3010A00100 | 3010A00141 |
| 54501A | 54501A-05-S | 2930A08612 | 2930A12803 |
| 54502A | 54502A-05-S | 2934A00771 | 2934A03989 |
| 54503A | 54503A-04-S | 2929A00565 | 2929A02997 |
| 54504A | 54504A-01-S | 2944A00100 | 2944A01099 |

ranges should have the resistance of their safety ground checked. This is done by making a simple resistance measurement between the safety ground terminal of the line filter and the rear panel of the instrument. If the resistance (minus multimeter lead resistance) is less than or equal to 0.1 Ohm, the unit passes. If the resistance is greater than 0.1 Ohm, the unit should be sent to an HP Service Center to have the line filter replaced.

The percentage of units with suspect line filters is quite small. There are also two alternate grounding mechanisms that tend to clamp the chassis voltage at a safe level. This resistance measurement should be made to assure the user of complete safety.

Please see the appropriate service note for full details.

HP 4951C Protocol Analyzer

HP 4951Cs with serial numbers 0000F00000/2846F52818 may have an earth ground/rear panel connection that does not meet HP standards. Note that not all instruments within the serial number range require rework, but will require inspection for the possibility of the fault. Please order Safety Service Note 4951C-13-S for more information.

HP 4952A Protocol Analyzer

HP 4952As with serial numbers 0000F00000/2945F23385 may have an earth ground/rear panel connection that does not meet HP safety standards. Note that not all instruments within the serial number range require rework, but will require inspection for the possibility of the fault. Please order Safety Service Note 4952A-14-S for more information.

(See "Service Notes," page 39)

Replacement Part Cross Reference

When selecting replacement parts for your HP products, you may notice that many manuals list only an HP part number for the part, even though it appears that this part is manufactured by one of the large semiconductor manufacturers. Service personnel often ask why only HP part numbers are listed.

It is recommended that HP replacement parts be used to ensure that the original performance of the product will be maintained. While some parts used in HP instruments are identical to those that can be purchased at a local electronics distributor, many times parts will be selected for certain characteristics, such as gain, bandwidth, capacitance, etc. There may also be slight mechanical differences, such as the shaping or length of leads, and in some cases special

quality checks are employed to ensure that only the highest reliability parts are used.

Therefore, we suggest obtaining replacement parts from HP to maintain the quality that you have paid for in your instrument. There may be situations however, where HP replacement parts are not in stock and substituting parts will allow you to return the product to service immediately. In these cases it may be worthwhile to see if a substitute part will work in the circuit. Perhaps an HP part could be ordered and installed at some later date.

To help you in these situations, here is a cross-reference of HP integrated circuit part numbers to manufacturers "generic type" part numbers (whom in most cases is the originator of the

part). Even though the cross-reference only lists one manufacturer, there may actually be several approved sources for an HP part. While every attempt was made to ensure the accuracy of the list, it is advisable to compare the description of the device being replaced with the description of the substituted part. For example, if the service manual describes the device being replaced as a "dual J-K flip-flop", check this against the description of the replacement part.

NOTE

This is not a comprehensive list. If the part number you are looking for is not listed here, the semiconductor is made exclusively for Hewlett-Packard and there is no substitute — it must be replaced with the same HP part number. □

("Service Notes," continued from page 5)

HP 8971B Noise Figure Test Set
Safety Service Note 8971B-01-S describes an incorrect size primary fuse for 220/240V operation. Serial numbers affected are 0000A00000/2716A00630. The incorrect value fuse is 1.25 amp and does not blow when the transformer secondary is shorted in the 220/240V operation mode.

The correct size fuse is 1.0 amp (HP P/N 2110-0001) and can be ordered from Hewlett-Packard. Also order a new adhesive-backed label for the rear panel (HP P/N 08971-80013) that contains the correct fuse value for 220/240V operation. The new label is applied directly over the silkscreened label on the rear panel.

HP 70004A Display

HP 70004A Displays with serial numbers 0000A00000/3020A00558 may have an insulated number wire on the solder side of the A4 Power Supply board assembly that does not meet HP safety standards. Please order Safety Service Note 70004A-06-S for more information. □

supplement to BENCH BRIEFS SERVICE NOTE INDEX

Important Notice about Service Notes

Service notes contain product-specific service information for Hewlett-Packard's electronic products. Subjects include product improvements, modifications, and procedures for troubleshooting, maintenance, and repair. Service Notes are published as appropriate throughout the life of a product. All new notes are announced in *Bench Briefs*.

Please note that Hewlett-Packard has restructured the procedure for handling and distributing instrument-related service notes through *Bench Briefs* and the microfiche program. □

Bench Briefs

If you want to order a service note, refer to the list of service notes in the index, find the service note number belonging to the product you are interested in, and note the package number. Use the form on the last page of *Bench Briefs* to order the number that appears in the "service note package" column. You will receive a package of service notes that includes the one you ordered.

Microfiche

Service notes are still available on microfiche. The part numbers are:

Library 5951-6511
Update service 5951-6517

Please note that automatic shipments of the update service will no longer be made. If you want to continue to receive quarterly updates to the microfiche library, you must place a new order during the first month of each quarter (May, August, November, February). Note that inventory will be purged at the end of each quarter.

Contact your local HP sales/service office for more information. □

| MA | 3324A-01 | New board revisions need new cable assemblies and vice versa | 024 |
| MR | 3325A-23 | Modification adds thermistor to prevent fuse blowing | 027 |
| MR | 3335A-13 | Recommended replacement of quartz oscillator thermal fuse to improve reliability | 027 |
| IO | 3458A-04 | Turn-on failure due to autostart subroutine malfunction | 026 |
| MR | 3458A-05 | Fixes, changes, & enhancements to outguard firmware (Rev 6.0) | 030 |
| MR | 3466A-20 | Mod prevents bad readings in ohms function when operated on battery power | 028 |
| IO | 3552A-19 | Preferred replacement capacitors and diodes | 028 |
| MR | 3562A-12 | Recommended modification extends battery life | 024 |
| MR | 3563A-02 | Recommended modification extends battery life | 024 |
| MR | 3577B-01 | Board mod prevents memory backup batt from discharging after only a few months | 028 |
| IO | 3580A-14 | Mods that must be made when replacing A7 Dig Storage or A8 Control boards | 024 |
| MR | 3585B-01 | ROM upgrade improves marker noise level reading with gated sweep on | 030 |
| MR | 3588A-02A | Metal flakes on the motherboard may cause intermittent hardware errors | 027 |
| MR | 3588A-03 | Memory upgrade prevents system failures on units with firmware rev A.00.01 | 025 |
| IO | 3702B-54 | Instructions on cleaning attenuator switches | 024 |
| IO | 3710A-25 | Instructions on cleaning attenuator switches | 024 |
| IO | 3730A-07 | Instructions on cleaning attenuator switches | 024 |
| IO | 3776A-34A | Preferred replacement of A13U48 RAM on the processor assembly | 030 |
| IO | 3776A-38 | Preferred replacement of CR3-6 on the A6 analog receiver assembly | 024 |
| IO | 3776B-41A | Preferred replacement of A13U48 RAM on the processor assembly | 030 |
| IO | 3776B-45 | Preferred replacement of CR3-6 on the A6 analog receiver assembly | 024 |
| MA | 3787B-04F | Instructions on retrofitting additional features to older instruments | 024 |
| IO | 3787B-11 | Automatic performance test program for use with Series 200 controllers | 025 |
| IO | 3789B-06 | Instructions on upgrading older 3789Bs to current specs & options | 030 |
| MA | 3852A-03 | Power supply fuse replaced with new slow-blow fuse for improved reliability | 026 |
| IO | 3852A-04 | Recommended replacement power supply | 029 |
| MR | 4193A-05A | Modification to avoid unstable contacts on A20J11 and A20J12 | 026 |
| MR | 4193A-05 | Recommended replacement connectors to avoid unstable contact | 024 |
| MR | 4194A-10A | Modification to remedy blinking Overload lamp for test channel input | 028 |
| MR | 4194A-10 | Modification to remedy blinking overload lamp for test channel input | 026 |
| IO | 4274A-28 | Repair method for A11 and A12 boards | 027 |

| SN Type | SN No. | Abstract | Service Note Package |
|---------|-------------|--|----------------------|
| IO | 4274A-29 | Preferred replacement for A11CR13/14 bridge diodes | 027 |
| IO | 4275A-24 | Repair method for A11 and A12 boards | 027 |
| IO | 4275A-25 | Preferred replacement for A11CR13/14 bridge diodes | 027 |
| MA | 4284A-10 | Modification to add the HP-IB Interface to Option 109 | 027 |
| MA | 4285A-01A | Opt 002 allows control of 42841A Bias Current Source & 42851A Prec Q Adpt | 028 |
| MR | 4285A-06 | ROM replacement so that instrument will measure 0 m cable length correction data | 025 |
| MA | 4285A-07 | Modification to add the HP-IB Interface to Option 109 | 027 |
| IO | 4329A-08 | Instructions on how to mount a new resistor on the A3 Power Supply Board | 025 |
| MA | 4934A-06A | Retrofit of special Option H05 increases monitor volume by approx 20 dB | 025 |
| IO | 4934A-07A | BT1 battery part number in manual is wrong; should be 1420-0378 | 024 |
| MR | 4934A-10 | Modification to prevent mains fuse failure during power on or off | 025 |
| IO | 4935A-15 | New preferred clamshell case halves for older instruments | 030 |
| IO | 4936A-13 | Preferred replacement diodes on receiver assembly | 024 |
| IO | 4936A-14 | Preferred replacement capacitors on receiver assembly in event of failure | 025 |
| IO | 4947A-09A | Preferred replacement of A13U48 RAM on the processor assembly | 030 |
| MR | 4947A-13 | Modification to correct erroneous output over HP-IB | 024 |
| MR | 4951B-06 | Modification to eliminate "hash" on the screen at turn-on and during run time | 027 |
| SA | 4951C-13-S | Earth ground/rear panel connection does not meet HP standards | 026 |
| MA | 4952A-12A | Firmware upgrade from Revision 1.0 to A.02.01 | 026 |
| MR | 4952A-13 | Firmware upgrade from Revision A.02.00 to A.02.01 | 026 |
| SA | 4952A-14-S | Earth ground/rear panel connection does not meet HP standards | 026 |
| IO | 4972A-06 | New CPU board upgrade and repair process | 026 |
| IO | 4972A-06 | Notification of new CPU board upgrade and repair | 025 |
| MR | 4991A-01 | Modification prevents power on lockup state due to hardware and firmware bugs | 026 |
| MR | 4991A-02 | Modification eliminates errors while determining segment length | 026 |

| IO | 8903B/E-07 | Assembly exchange program for the 8903B and 8903E | 024 |
| SA | 8971B-01-S | Recommend changing fuse from 1.25 amp to 1.0 amp for 220/240 volt operation | 024 |
| IO | 8971B-02 | Troubleshooting hint for heater DAC readback failure | 025 |

| SN Type | SN No. | Abstract | Service Note Package |
|---------|-------------|---|----------------------|
| MR | E2500A-03 | Recommended replacement of quartz oscillator thermal fuses to improve reliability | 024 |
| MA | E2500A-04A | System instrument on a disk (SID) software upgrades | 028 |
| MA | E2500A-04 | System instrument on a disk (SID) software upgrades | 025 |
| MR | E2500A-05 | Modification removes C309 & C310 from the 86791-60125 DAC motherboard assy | 026 |
| MR | 11848A-02 | Modification to eliminate peak in noise flatness test | 026 |
| MA | 16451A-01 | Instructions on mounting the Micrometer in the proper position | 028 |
| IO | 16500A-10 | 16500A software, version 3.00 or lower, gives false indication of RAM failures | 024 |
| IO | 16510A-03 | Modified Performance Test 5 provides more accurate test results | 027 |
| IO | 16510A-04A | New Threshold Accuracy test no longer fails good boards; works in manual/auto | 028 |
| IO | 16510A-04 | Modified Threshold Accuracy Test provides more accurate test results | 027 |
| IO | 16510B-02 | Modified Performance Test 5 provides more accurate test results | 027 |
| IO | 16510B-03A | New Threshold Accuracy test no longer fails good boards; works in manual/auto | 028 |
| IO | 16510B-03 | Modified Threshold Accuracy Test provides more accurate test results | 027 |
| MR | 37212B-02A | Firmware upgrade provides more reliable performance | 027 |
| MA | 37212B-02B | New firmware upgrade is available | 030 |
| IO | 37212B-03B | When replacing firmware, order a set of unique part numbers | 027 |
| IO | 37212B-04 | Preferred replacement of ROM A1U1 and microprocessor A1U6 | 030 |
| MR | 37900B/C-01 | New rear panel eliminates broken screws on rear panel of interf & sig cards | 028 |
| MR | 5372A-03 | Modification to prevent possible fuse failure | 028 |
| MR | 5372A-04 | Modification to prevent main rectifier failure | 028 |
| IO | 54501A-04 | Replacing the cabinet requires a new rear panel | 025 |
| MA | 54502A-04 | Repair procedure for instruments with Option 001 enhancements | 024 |
| IO | 54503A-03 | Repair procedure for instruments with Option 001 enhancements | 027 |
| MR | 60501A-03 | Modification reduces source turn-on current overshoot | 025 |
| MR | 60502A-03 | Modification reduces source turn-on current overshoot | 025 |
| MR | 60504A-03A | Modification to reduce source turn-on current overshoot | 029 |
| MR | 60504A-03A | Modification to reduce source turn-on current overshoot | 030 |
| MR | 60504A-03 | Modification reduces source turn-on current overshoot | 025 |
| MR | 70004A-01 | Firmware upgrade kit improves instrument performance and reliability | 025 |
| IO | 70004A-05 | Instructions on using an HP-HIL keyboard with the HP 70004 Display | 024 |
| SA | 70004A-06-S | Insulated jumper wire does not meet safety standards | 026 |
| IO | 70841A-01 | Unusual shock to the generator may cause intermittent clock or data outputs | 029 |
| IO | 70842A-01 | Unusual shock to the detector may cause intermittent clock or data outputs | 029 |
| MR | 70900A-27 | Enhanced Module Verification Software operating instructions - Error 7050 | 027 |
| MA | 70900B-03 | Modifications that may improve 40 kHz and 80 kHz spurious response | 024 |
| MR | 70900B-04 | New RAM/ROM assy eliminates "7050 Hardware Configuration Error" | 024 |
| MR | 70908A-08A | Module verification software modification | 024 |
| MR | 70908A-16 | Prevention of ROM checksum error | 026 |
| IO | 8116A-09 | Instructions on resetting instrument to clear illegal duty cycle display | 027 |
| IO | 83522A-07 | How to make new marker assy compatible with motherboard/ALC assy | 024 |
| IO | 83525A-07 | How to make new marker assy compatible with motherboard/ALC assy | 024 |
| MR | 83572C-01 | Modification to replace defective 2.4mm cables | 029 |
| MR | 83596A-02 | Modification to reduce sideband power, which improves performance | 027 |
| MR | 83597A-01 | Modification to prevent power supply shorting on the motherboard | 026 |
| MR | 83597A-02 | Modification to reduce sideband power, which improves performance | 027 |
| MR | 83597A-03 | Modification to replace defective 2.4mm cables | 029 |
| MR | 836XX-01 | Recommended modifications to improve reliability and performance | 024 |
| MA | 85629A-07C | Modification to upgrade HP 85629A to HP 85629B | 030 |
| MR | 85685A-18 | Recommended replacement A3 Attenuator with added limiter circuit | 024 |
| MR | 8662A-12D | Modification to prevent occurrence of Errors 03 and/or 04 | 028 |
| MR | 8663A-06D | Modification to prevent occurrence of Errors 03 and/or 04 | 028 |
| MR | 86792A-05A | Modification prevents Q6 from shorting on the 134 MHz Phase Lock Loop Assy A5 | 026 |
| MR | 86792A-05 | Modification prevents Q6 from shorting on the 134 MHz Phase Lock Loop Assy A5 | 025 |

Service Note Order Form

If you want to order a service note, refer to the list of service notes in the index and find the service note number belonging to the product you are interested in. Using the form on this page, order the number that appears in the "service note package" column. You will receive a package of service notes that includes the one you ordered.
