## 6000 X-Series versus Teledyne-LeCroy 6Zi

Competitive Comparison

Keysight DSOS404A (4 GHz)

LeCroy 604Zi (4 GHz)

A 15" multi-touch capacitive display offers significantly more viewing area and much greater sensitivity to user inputs.

### Keysight S-Series

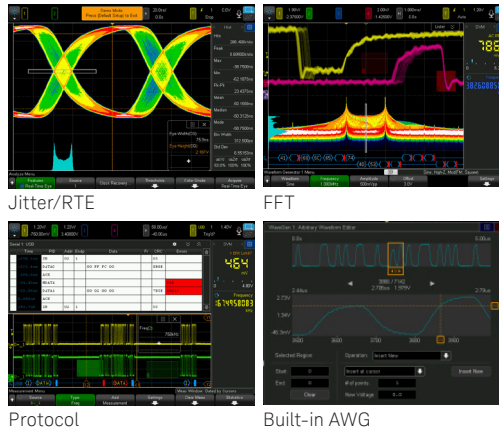

### Teledyne-LeCroy 6Zi Series

The Keysight Technologies, Inc. S-Series oscilloscopes provide bandwidths up to 8 GHz with class-leading signal integrity and analysis. Custom ASICs, including the industry's first 40 GSa/s, 10-bit ADC, allow you to see your real signal. Class-leading deep memory and a large suite of analysis tools complement a designed-for-touch user interface and the industry's first 15" multi-touch capacitive display.

## 6000 X-Series versus Teledyne-LeCroy 6Zi

Infrequent glitches and signal jitter captured after one second on the 6000 X-Series with standard update rate.

6Zi after 60 seconds using "WaveStream" Fast Viewing Mode – it never sees the glitches and shows limited signal jitter due to its slow update rate.

A fast update rate allows you to see an infrequent glitch, but then you want to isolate it. With the 6000 X-Series' hardware zone trigger, you just draw a box to isolate the signal of interest. If you can see it, you can trigger on it.

LeCroy 6Zi consumes double the max power and runs significantly hotter than the 6000 X-Series.

The 6000 X-Series' low power consumption helps it reach an excellent MTBF of > 120,000 hours.

Keysight's 6000 X-Series oscilloscopes offer bandwidths up to 6 GHz with the key benefits of the InfiniiVision line: affordability, excellent visualization, 6-in-1 integration and investment protection. Speed your debugging with its uncompromised fast update rate, combined with the industry's only hardware zone trigger. Operation is simplified with a localized GUI that is designed for touch and the industry's first 12.1" multi-touch capacitive display. Voice control makes doing oscilloscope inputs easy while your hands are holding probes.
