Introduction

Keysight 34410A 6½-Digit High-Performance DMM

- 10,000 readings/s @ 5½-digits direct to PC
- 1,000 readings/s @ 6½-digits direct to PC
- 30 PPM 1-year Basic DC accuracy
- LAN, USB & GPIB standard
- DCV, ACV, DCI, ACI, 2-wire and 4-wire Resistance, Frequency, Period, Continuity, and Diode Test
- Capacitance & Temperature measurements
- Expanded measurement ranges
- Data logger with 50 k reading non-volatile memory

Keysight 34411A 6½-Digit Enhanced-Performance DMM

All the features of the 34410A, plus:

- 50,000 readings/s @ 4½-digits direct to PC
- 1 million volatile reading memory
- Analog level triggering
- Programmable Pre/Post triggering

The Best Just Got Better

The Keysight Technologies, Inc. 34410A and 34411A 6½-Digit DMMs represent the latest generation of multimeters from Keysight Technologies. Building on the phenomenal success of the industry-standard Keysight 34401A, these new meters offer improved accuracy, expanded measurement capability, dramatically improved measurement speed and throughput, and modern computer interfaces including LAN and USB. The dual display offers both dual measurement capabilities and ease of use when setting up and configuring the DMM. Improvements have been made in every facet of the 34401A to make the best even better, whether you use it on the bench or in a system.

Dramatic Speed Improvements

Whether it's raw reading speed or fast system throughput, the 34410A sets a new benchmark in performance. Using a new A/D technology, the 34410A achieves an impressive 10,000 readings a second at 5½-digits, and can stream readings to your computer at this same speed! Triggering is fast and precise, with both trigger latency and trigger jitter less than 1 µs, while bus query response is less than 500 µs. ACV measurements are faster as well thanks to a digital measurement technique that additionally improves accuracy at high and low frequencies. For even greater reading speeds, select the 34411A, which achieves 50,000 readings a second at 4½-digits.

Enhanced Measurement Performance

The 34410A and 34411A offer Temperature and Capacitance capabilities, in addition to those measurements you have come to expect, such as DCV, ACV, DCI, ACI, 2-wire and 4-wire Resistance, Frequency, Period, Continuity and Diode Test. You also get Offset Compensated Ohms, allowing you to accurately measure resistance in the presence of voltages. Measurement ranges have been expanded as well; for example, DC and AC Current Ranges now go down to 100 µA, resulting in 100 pA resolution. Real-time math and statistics are included, and a peak-detect capability allows you to capture peaks as short as 20 µs.

Even Greater Performance with the 34411A

The 34411A has all the features of the 34410A, plus additional performance that makes it even more powerful. With the ability to make 50,000 readings per second at 4½-digits, Analog Level Triggering, programmable Pre- and Post-Trigger and 1 million readings of volatile memory in addition to 50,000 reading of non-volatile memory, you now have the ability to capture low-frequency waveforms, characterize device performance and transfer results for analysis on your computer.

Data Logger Function

A front panel data logger function allows you to set the meter up to make unattended, paced measurements over a fixed time or number of events, then pull up the results later for review or transfer to a computer for analysis. Set the meter up to take measurements every 10 seconds for an hour, go have lunch, and check the results upon your return. The contextual front panel sequences make setup and read back a breeze.

Improved Ease of Use

From the inclusion of a second display to configuring setups for each of the measurement functions, these new DMMs offer significant improvements in usability. Simple things are simple; more complicated setups are easier than ever. There is even a new probe set designed to more easily probe today's fine-pitch components. Finally, there is a built-in Graphical Web Interface that allows you to interactively control the DMM without the hassle of programming at all!

Modern I/O for Improved Connectivity

When connecting to a computer, select LAN, USB or GPIB interfaces; all three are standard on the 34410A and 34411A. Concerned

about the viability of your existing software programs? These new DMMs respond to Standard Commands for Programmable Instrumentation (SCPI), and there is even a 34401A Emulation Mode to ensure the easiest upgrade possible. Keysight's I/O Library Suite ships with the 34410A and 34411A to help you quickly establish an error-free connection between your PC and instrument. It provides robust instrument control and works with the software development environment you choose.

LXI – Class C

LAN Extensions for Instruments (LXI) provides the next generation I/O for system applications requiring the highest throughput. Transfer rates of over 250,000 readings/s are attainable ensuring even the most data intensive measurements are fast, without the overhead cost of an instrument cardcage. Both the 34410A and the 34411A are LXI – Class C compliant.

Built To Last

Our new DMMs were designed to high standards of ruggedness and reliability. From the robust package with its shock absorbing bumpers to careful selection of components and conservative circuit design, these meters are built to last. Calculated Mean Time Between Failure (MTBF) is in excess of 100,000 hours. Backed by a 1-year warranty and a worldwide network of service centers, you can buy with confidence.

¹ Specifications are for 90 minute warm-up and 100 PLC.² Relative to calibration standards.³ 20% overrange on all ranges, except DCV 1000 V, ACV 750 V, DCI and ACI 3 A ranges.⁴ For each additional volt over ± 500 V add 0.02 mV of error.⁵ Specifications are for sine wave input > 0.3% of range and > 1 mV_{rms}. Add 30 μV error for frequencies below 1 kHz. 750 VAC range limited to 8 x 10⁷ Volts-Hz. For each additional volt over 300 V_{rms} add 0.7 mV_{rms} of error.⁶ Specifications are for 4-wire resistance measurements, or 2-wire using Math Null. Without Math Null, add 0.2 Ω additional error in 2-wire resistance measurements.⁷ Specifications are for sine wave input > 1% of range and > 10 μArms. Frequencies > 5 kHz are typical for all ranges. For the 3 A range (all frequencies) add 0.05% of reading + 0.02% of range to listed specifications.⁸ Specifications are for 1-hour warm-up using Math Null. Additional errors may occur for non-film capacitors.⁹ For total measurement accuracy, add temperature probe error.¹⁰ Accuracy specifications are for the voltage measured at the input terminals only. 1 mA test current is typical. Variation in the current source will create some variation in the voltage drop across a diode junction.

¹ Resolution is defined as the typical DCV 10 V range RMS noise. Auto-zero on for NPLC ≥ 1. See manual for additional noise characteristics.
² Normal mode rejection for power line frequency ± 0.1%.
³ For power-line frequency ± 1% 75 dB and for ± 3% 55 dB.
⁴ Maximum rate with auto-zero off for 60 Hz and (50 Hz) operation.
⁵ Only available for the 34411A.

Measurement Characteristics

DC Voltage

Measurement Method:

Continuously integrating multi-slope IV A/D converter

Linearity: 0.0002% of reading (10 V range) + 0.0001% of range

Input Resistance:

0.1 V, 1 V, 10 V 10 M Ω or > 10 G Ω
Ranges (Selectable)
100 V, 1000 V 10 M Ω \pm 1%
Ranges (Fixed)

Input Bias Current: < 50 pA at 25 °C

Input Protection: 1000 V

DC CMRR: 140 dB¹

True RMS AC Voltage

Measurement Method:

AC-coupled True RMS measurement. Digital sampling with anti-alias filter.

Crest Factor:

No additional error for crest factors < 10. Limited by peak input and 300 kHz bandwidth.

Peak Input:

300% of range or 1100 V

Overload Ranging:

Will select higher range if peak input overload is detected during auto range. Overload is reported in manual ranging.

AC CMR: 70 dB²

Maximum Input: 400 Vdc, 1100 Vpk

Input Impedance:

1 M Ω \pm 2% in parallel with < 150 pF

Input Protection: 750 V_{rms} all ranges

Resistance

Measurement Method:

Selectable 2-wire or 4-wire. Current source referenced to LO input.

Offset Compensation:

Selectable on the 100 Ω , 1 k Ω , and 10 k Ω ranges

Max. Lead Resistance (4-wire):

10% of range per lead for 100 Ω , 1 k Ω .
1 k Ω per lead on all other ranges

Input Protection:

1000 V on all ranges

DC Current

Current Shunt:

200 Ω for 100 μ A, 1 mA
2 Ω for 10 mA, 100 mA
0.1 Ω for 1 A, 3 A

Input Protection: 3 A, 250 V fuse

True RMS AC Current

Measurement Method:

AC-coupled True RMS measurement. Directly coupled to the fuse and shunt. Digital sampling with anti-alias filter.

Current Shunt:

200 Ω for 100 μ A, 1 mA
2 Ω for 10 mA, 100 mA
0.1 Ω for 1 A, 3 A

Maximum Input:

The peak value of the DC + AC current must be < 300% of range. The RMS current must be < 3 A including the DC current content.

Input Protection: 3 A, 250 V fuse

Frequency and Period

Measurement Method:

Reciprocal-counting technique. AC-coupled input using the AC voltage measurement function.

Input Impedance:

1 M Ω \pm 2% in parallel with < 150 pF

Input Protection: 750 V_{rms} all ranges

Capacitance

Measurement Method:

Current input with measurement of resulting ramp.

Connection Type: 2-wire

Temperature

Thermistor:

2.2 k Ω , 5 k Ω , and 10 k Ω

RTD: α = 0.00385

R₀ from 49 Ω to 2.1 k Ω

Continuity/Diode Test

Response Time:

300 samples/sec with audible tone

Continuity Threshold: Fixed at 10 Ω
