Service menu allow change of model and frequency range.
SERVICE/-2010/SERVICE

Other way is to program EEPROM on back of Processor card

Last if you have TME and ESA Module can do it there

What's the catch then? Could it be just the calibration thing? if it can be converted so easily then why did Agilent even sell E4404B? or why did anybody buy E4405B? Their original prices were hugely different...

IDK, I've used it to change mine to the EMC model (same firmware), the **service** menu with the right **password** looks to even permit you to change the serial number. the -2010 does not permit then though. the Serial Number and Save Serial Number are greyed out so there's additional **service passwords**.
