TAMS is committed to solving customer problems with innovative solutions.

Our products utilize technology licensed directly from Hewlett-Packard and Agilent Technologies or developed by our engineers.

Test & Measurement Systems, Inc. was started in 1992 as a service business and manufacturer. We acquired HP BASIC product responsibility in 1998. Our close relationship with HP and Agilent Technologies has allowed us to develop unique hardware and software solutions.   In addition to our expertise in GPIB, HP-UX, SICL and BASIC, we are fully committed to supporting the Linux operating system.   By supporting Linux with TAMS products, we are enabling customers to deploy Test & Measurement solutions on the lowest cost hardware and operating system infrastructure.   As customers continue to look for reliable and cost effective solutions, we believe that Linux is more attractive today than it ever was. Many of our software products offer Legacy HP-UX and RMB users a migration path to Red Hat Linux.

We pride ourselves in the quality of our products and services, as well as our engineering and product development innovation. We appreciate the opportunity to show you our products, demonstrate our services, and help you solve problems.
