Wireless Radio Test Sets

IFR 2975 Project 25 Radio Test Set

A test solution designed from the ground up to handle today's advanced digital radio applications

New, Expanded Service Monitor Functions

- 2.7 GHz Frequency Range with 2.7 GHz Spectrum Analyzer and Tracking Generator
- New "Try before you buy" options
- 500 kHz (Useable) Dual-Channel Oscilloscope
- 12.5, 25, 60 and 200 kHz IF Filters
- User Selectable Audio Filters
- Tone Signaling/Tone Remote Functions
- New Auto-tune Capabilities
- New Zero Span Spectrum Analyzer Mode
- New LTR Trunking Option
- New 40 kHz Audio Analyzer

New and Exclusive P25 Test Features

- New P25 Trunking Emulation
- New Exclusive P25 Inbound Signaling Packet (ISP) Decode Function
- New Exclusive P25 Outbound Signaling Packet (OSP) Message Programmer
- Full TIA/EIA-102 Test Patterns
- AES and DES OFB Type III Encryption
- **CQPSK Transmit and Receive**
- COPSK EVM and Constellation Display

Exclusive SmartNet™/SmartZone™ Tests

- Control Channel Assignment to P25 or SmartNet™/SmartZone™ Traffic Channel
- SmartNet™/SmartZone™ Scanner
- SmartNet[™]/SmartZone[™] Test Functions

Innovative Control and Operational Features

- Quick Tune Spectrum Analyzer
- PS-2 Keyboard and Mouse Operation
- IP Addressable
- RS-232, GPIB and Ethernet Operation

The NEW Standard for P25 Testing

Since 1976, Aeroflex has provided cutting-edge test solutions to the mobile radio industry. Aeroflex carries on that tradition with the 2975 Radio Test Set. It's a test solution designed from the ground up to handle today's advanced communication applications.

- Project 25 parametric, protocol and Common Air Interface
- IMBE vocoder and data encryption tests
- Modulation and demodulation of C4FM and CQPSK
- AES and DES OFB Type III encryption/decryption support
- Exclusive standard C4FM Modulation Fidelity meter and CQPSK EVM option allows for true transmitter alignment

"Try before you buy" for IFR 2975 Test Set Options

The IFR 2975 offers unique "try before you buy" options where customers can try an option before purchase. Owners of 2975 test sets can try 2975 options for up to 30 days before making an investment decision. Once the choice is made, the options can be enabled in the field. Options for the 2975 radio test set include:

- Advanced Encryption Systems (AES) Option: Includes support for higher security features as well as continued support for the current Digital Encryption System (DES) Type III used in existing P25 systems.
- Encryption Key Management Option: Provides the ability to fully manage keys via the KVL-3000+™ using the P25 key management protocol including the ability to load individual, multiple and groups of keys. The 2975 also supports programming of keys through the front panel for manual key management.
- Linear Simulcast Modulation[™]Option: With both transmitter and receiver tests, the 2975 now supports parametric measurements for repeater tests utilizing CQPSK modulation for LSM applications.
- P25 Phase II CQPSK Option: This enables all the functionality of the 2975 for use in 6.25 kHz bandwidths.
- VHF/UHF P25 Trunking Option: Provides capability for new system development utilizing P25 technology in existing VHF/UHF band for public mobile radio applications.
- Control Channel Logging Option: This exclusive feature for P25 trunked operations allows users to verify conformance with various P25 radio systems offered by a number of different manufacturers.
- P25 Trunking Protocol Option: With the ability to optionally set P25 OSP messages for control channel and decode ISP messages from user radios, the 2975 verifies protocol operation of radios on P25 networks.
- 900 MHz Band Option: Support for SmartNet[™]/SmartZone[™] systems used in commercial business applications.
- NEW LTR™Trunking Option: Support for both repeater simulator and mobile simulation.
- NEW 0 40 kHz Audio Analyzer Option: Support for extended audio analysis.
- NEW Analog Simulcast Option: Allows for fast alignment of analog simulcast systems.
- NEW BER Tests Option: Allows for TX BER as well as RX BER measurements using a defined serial connection.
- NEW AutoTest application Option: Speeds testing and logging of test results on analog and P25 conventional radio systems.

NEW P25 Trunking Test Gives Flexibility to P25 Radio Testing

With the Optional P25 Trunking application, the 2975 now provides test professionals the ability to quickly and dynamically test P25 mobile subscriber units operating in the VHF/UHF, 700 MHz and 800 MHz bands. The 2975 provides the required P25 control channel with user defined parameters for Unit/Group call procedures including the exclusive ability to set downlink OSP control channel message elements and to decode the uplink ISP messages for use in verification of mobile interoperability. With P25 Trunking (Options 4 and 14), the user can initiate tests without the need to go through a predetermined test sequence. These tests include transmitter verification of performance and receiver sensitivity tests that are separate, easy tests. With the 2975's exclusive "meter panel", test times for subscriber units can be reduced to less than 30 seconds!

New TIA/EIA-102 Test Patterns

The 2975 now supports exclusive test patterns per TIA/EIA-102CAAA standards. These patterns include:

STD 1011 - Standard Tone Test Pattern which produces a 1011 Hz tone at the reference level at the receiver vocoder.

STD CAL - Calibration Test Pattern which provides a modified version of the 1011 Hz tone by inverting every 20th bit, yielding 172 errors out of 3456 bits (4.977% BER).

STD SILENCE - Standard Silence Test Pattern which produces audio silence (no sound) at the receiver vocoder output.

STD INTFRNC - Standard Interference Test Pattern which produces audio silence (no sound) at the receiver vocoder output and is balanced to have approximately equal positive and negative signal deviations.

STD BUSY - Standard Busy Test Pattern which produces channel busy information.

STD IDLE - Standard Idle Test Pattern which produces channel idle information.

STD LDU1TRG - Trigger On Start Of Link Data Unit 1 (LDU1) which produces a trigger at the start of Link Data Unit 1 (LDU1).

STD NOTRIG - No Trigger which produces no trigger.

STD LDU2TRG - Trigger On Start Of Link Data Unit 2 (LDU2) which produces a trigger at the start of Link Data Unit 2 (LDU2).

STD 511 (V.52) - Standard Transmitter Test Pattern which produces a standard transmitter test pattern by continuously repeating a 511 bit binary pseudorandom bit sequence based upon ITU-T O-153, formerly CCITT V.52.

STD SYMRATE - Standard Transmitter Symbol Rate Pattern which produces a standard transmitter symbol rate pattern by continuously repeating a bit stream defined as the following pattern:

 $01\ 01\ 11\ 11\ 01\ 01\ 11\ 11\ \dots$

STD LOWDEV - Standard Transmitter Low Deviation Pattern which produces a standard transmitter low deviation pattern by continuously repeating a bit stream defined as the following pattern:

10 10 00 00 10 10 00 00 ...

STD FIDPAT - Standard Transmitter C4FM Modulation Fidelity Pattern which produces a standard transmitter C4FM modulation fidelity pattern by continuously repeating a bit stream defined as the following 24-bit pattern: 01 01 11 00 00 01 10 01 11 10 11 11 ...

STD FIDSPECT - Standard Transmitter C4FM Modulation Fidelity Spectrum.

NEW SmartNet™/SmartZone™ Test Functions Provide New Ways to Test Motorola Trunked Radio Systems (Options 3 and 8)

With the optional SmartNet[™]/SmartZone[™]application, the 2975 provides innovative ways to test trunked radio systems including a new "scanner" mode that allows the user to follow a call from the control channel to the voice channel. This unique function allows for fast testing of system operation as well as RF performance tests. The

2975 also provides the ability to hand off to a P25 traffic channel directly from a SmartNetTM II Control Channel, allowing for interoperability testing in a repeater mode.

Full-Featured Communications Test System

For complete transmitter spectrum performance testing, swept antenna and transmission line testing and at-a-glance troubleshooting, the 2975 comes standard with a digitized 2.7 GHz spectrum analyzer and dual channel digital storage oscilloscope. In addition, the 2975 provides you with the functionality of over 20 discrete instruments integrated into a single platform. The 2975 provides as standard equipment all the tools you need to perform comprehensive RF testing.

- RF Receive/Generate with full cross band Duplex Operation
- AM/FM/C4FM Modulation and Demodulation
- RF Power/Frequency/Frequency Error/Distortion/SINAD/Voltage
- Repeater simulation for Project 25 compliant radio testing in the conventional mode
- IF Filter settings match real-world application, with 12.5 kHz, 25 kHz, 60 kHz and 200 kHz selectable (FM)
- Extended post detection audio filters
- Full-feature store and recall functions
- New tone and tone remote signaling
- Spectrum Analyzer and Tracking Generator from 1 MHz to 2.7 GHz
- 500 kHz (Useable) Dual Channel Oscilloscope

High Tech Testing That's Easy To Use

Building advanced functionality into a test instrument means little if it's too complex to use efficiently. That's why we've focused on ensuring the 2975's advanced functions are easily harnessed. Exclusive control features include a standard communication service monitor look and feel with push key entry and soft-key functions for routine daily work. But added to this conventional operation is the power of today's technology including:

- Ethernet for remote control flexibility
- New internal web server for accessing files, status updates and remote display operation
- New E-Manual support allows you to upload test and alignment procedure for display directly on the 2975.
- PS2 keyboard and mouse operation
- Full GPIB and RS-232 interface with Remote Command
- On-board 20 GB hard drive to support future enhancements

New E-Manual Support

Now you have the ability to upload to the 2975 your own procedures for testing and aligning radio networks. This exclusive "E-Manual" operation allows you to eliminate the need for carrying additional manuals to the field - everything is self contained on the 2975!

Exclusive Spectrum Analyzer Features include new "Ouick Tune" feature

Now, tuning the spectrum analyzer is as simple as a double click on the mouse. With Aeroflex's exclusive "Quick Tune" spectrum analyzer, the 2975 allows you to double click a signal on the spectrum analyzer screen and the analyzer will automatically change center frequency to the selected frequency.

Non-Proprietary Scripting Language

One of the 2975's most notable features is its use of the TCL/TK scripting language. TCL/TK is an open industry standard, with extensive third party support, which means that developing customized test routines is faster and easier. The 2975 also supports X WindowsTM operation.

Supports Network Connectivity

Another key advancement is the use of modern network and connectivity technology. The 2975 employs Ethernet as one of its communication ports, thus allowing remote operation and data collection. You can also redirect display and keypad operations and software upgrades can be installed quickly over the Internet, saving you valuable time and virtually eliminating instrument downtime.

Man-Machine Interface

The high-resolution color display and alphanumeric keypad with multi-function soft keys provide a user-friendly interface. The menu structure has been enhanced to make complex test routines simple and straightforward. A 20 GB internal hard drive and 3.5 in. floppy drive simplify program installation and maximize flexibility in storage and recall of setup information, frequency lists and test data.

Portability

At 15 kg (33 lbs.), the 2975 is perfect for the field technician with a lot of ground to cover. Plus, its rugged design makes it an ideal solution for the rigors of the field.

SPECIFICATION

GENERATOR (RECEIVER TEST)

GENERATE PORT

Port Protection

10 W (+40 dBm) for 30 sec.

FREOUENCY

Range

1 MHz to 2.7 GHz

Resolution

1 Hz

Accuracy

Same as Time Base

OUTPUT LEVEL

GENERATE PORT

Range

+10 to -110 dBm

Resolution

0.1 dB

Accuracy

 $\pm 1.5 \text{ dB}$ (<1.3 GHz), $\pm 2.5 \text{ dB}$ (>1.3 GHz)

T/R PORT

Range

-30 to -137 dBm

Resolution

0.1 dB

Accuracy

±1 dB <1.3 GHz >-120 dBm; ±1.5 dB >1.3 GHz >-110 dBm

SPECTRAL PURITY

Harmonic Spurious

-25 dBc max >50 MHz

Non-Harmonic Spurious

-40 dBc max <1.5 GHz

-30 dBc max >1.5 GHz

Residual FM

<15 Hz rms (Post Detection BW = 300 Hz to 3 kHz)

SSB Phase Noise (20 kHz offset)

-100 dBc/Hz typical, -92 dBc/Hz max (<1 GHz), -90 dBc/Hz max (>1 GHz)

Residual AM

TRIGGER SOURCE

Channel 1, Channel 2, Internal or External Trigger

External Trigger: expects a TTL level (2 V-trigger level)

SPECIAL FUNCTIONS (Markers, Delay, etc.)

Modes: Live, Triggered Mode (Auto, Normal, Single shot trigger, persistence)

SMARTNET™ /SMARTZONE™ TRUNKING

Signaling Types

SmartNet™, SmartZone™ (Type II)

Call Tests

Analog and P25 (Digital Traffic Channel) Mobile Initiated tests and System Initiated tests

Testing Results

Power, frequency error, RSSI, deviation, sensitivity, SINAD, audio counter, C4FM EVM, distortion

Protocol Trunking Message Elements

Analog: System ID, Group ID (Automatically determined upon PPT), Unit ID (Automatically determined upon PTT), Frequency Band, Control Channel, Traffic Channel (by frequency and channel number) Digital (P25 Traffic Channel): System ID, Group ID (Automatically determined upon PPT), Unit ID (Automatically determined on PPT), NAC and MFID (Automatically detected upon PPT), Frequency Band, Control Channel, Traffic Channel by Frequency and Channel Number)

Frequency Bands

851 - 870 MHz, 866 - 870 MHz Split Channel,

403 - 522 MHz UHF, 132 - 175 MHz VHF, User defined

Channel Plan Entry for VHF/UHF

Separate transmitter and receiver start-and-end frequency for threeblocks. Independent channel spacing for each block.

Special Features

SmartNet™/SmartZone™ trunking channel assignment to P25 traffic

Control Channel Scanner

Search and find control channel within the channels bands. Search by channel number with automatic verification and display of found control channels. Found control channels also display System ID information automatically. Upon selection of live control channel, the 2975 will track control channel, group ID or unit ID traffic.

LTR TRUNKING OPTION

Modes
