6½-Digit THD Multimeters
6½-Digit Audio Analyzing Multimeter

- **THD, THD+Noise, and SINAD measurements**
- **20Hz–20kHz sine wave generator**
- **Fast frequency sweeps**
- **2015-P: Identifies peak spectral components**
- **2015: 4Vrms single-ended or 8Vrms differential output**
- **2016: 9.5Vrms single-ended or 19Vrms differential output**
- **Individual harmonic magnitude measurements**
- **5 standard audio shaping filters**
- **13 DMM functions (6½ digits)**

The Model 2015-P Audio Analyzing Digital Multimeter and the Models 2015 and 2016 Total Harmonic Distortion Multimeters combine audio band quality measurements and analysis with a full-function 6½-digit DMM. Test engineers can make a broad range of voltage, resistance, current, frequency, and distortion measurements, all with the same compact, half-rack measurement instrument. The Model 2016 has twice the sine wave generator output of the Model 2015 for applications that require test signals greater than 8Vrms. The Model 2015-P offers additional processing capacity for frequency spectrum analysis.

Frequency Domain Distortion Analysis

For applications such as assessing non-linear distortion in components, devices, and systems, DSP-based processing allows the Models 2015-P, 2015, and 2016 to provide frequency domain analysis in conventional time domain instruments. They can measure Total Harmonic Distortion (THD) over a the complete 20Hz to 20kHz audio band. They also measure over a wide input range (up to 750Vrms) and have low residual distortion (–87dB). The THD reading can be expressed either in decibels or as a percentage.

In addition to THD, the Models 2015-P, 2015, and 2016 can compute THD+Noise and Signal-to-Noise plus Distortion (SINAD). For analyses in which the individual harmonics are the criteria of greatest interest, the instruments can report any of the (up to 64) harmonic magnitudes that can be included in the distortion measurements. The user can program the actual number of harmonics to be included in a computation, so accuracy, speed, and complexity can be optimized for a specific application.

Optimized for Production Testing

The Models 2015-P, 2015, and 2016 can perform fast frequency sweeps for characterizing audio-band circuitry in production test systems. For example, the instruments can execute a single sweep of 30 frequencies and transmit both rms voltage readings and THD readings to a computer in only 1.1 seconds. With that data, a complete frequency response analysis and a harmonic distortion vs. frequency analysis can be performed in a very short time. Thus high speed testing of the audio performance of a high volume device such as a cellular telephone can be performed without reducing the number of tests or reducing the measurements in each test. With these instruments, which are optimized for production testing, test engineers can lower test times, in comparison to test speeds achievable with general purpose audio analyzers, without sacrificing production test quality.

Dual Output Source

The Models 2015-P, 2015, and 2016 include an internal audio band sine wave source for generating stimulus signals. A second output, the inverse of the first output, is also available, simplifying the testing of differential input circuits for common mode or noise cancellation performance.

The Models 2015 and 2015-P have a 4Vrms single-ended output and 8Vrms differential source output. For tests that require a higher stimulus signal, the Model 2016 provides a 9.5Vrms single-ended output and a 19Vrms differential output.

APPLICATIONS

- **Wireless communication device audio quality testing**
- **Component linearity testing**
- **Lighting and ballast THD limit conformance testing**
- **Telephone and automotive speaker testing**

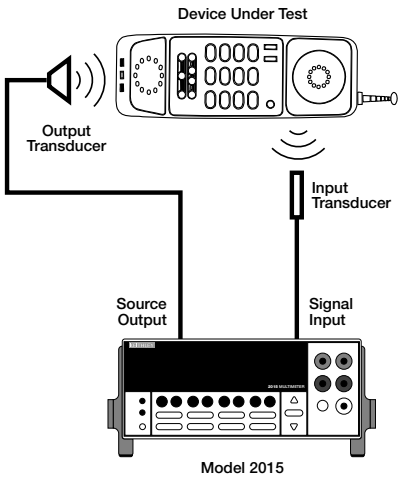

Figures 1, 2, and 3 demonstrate how the Model 2015-P, 2015, or 2016 can provide both time domain and frequency domain measurements in a single test protocol. ***Figure 1*** shows a sample test system schematic with a telecommunication device in a loop back mode test. The Model 2015 source provides a stimulus frequency sweep, and the Model 2015 measures the response from the microphone circuit. ***Figure 2*** shows the resulting frequency domain analysis of the THD and the first three harmonics as a function of frequency. ***Figure 3*** shows the time domain analysis of microphone circuit output voltage as a function of frequency.

Wide Selection of Audio Filters

Five industry-standard bandpass filters are provided for shaping the input signal for audio and telecommunication applications. Available filters include the CCITT weighting filter, CCIR filter, C-message filter, CCIR/ARM filter, and "A" weighting filter. The Models 2015-P, 2015, and 2016 provide programmable, high cutoff (low pass) and low cutoff (high pass) filters. Furthermore, the two filters can be implemented together to form a bandpass filter. The programmable filters can be used to filter out noise generated by electromechanical machinery on the production floor or to simulate other types of system transmission characteristics.

Broad Measurement Flexibility

In addition to their THD, THD+Noise, SINAD, and individual harmonic measurement capabilities, the instruments provide a comprehensive set of DMM functions, including DCV, ACV, DCI, ACI, 2WΩ, 4WΩ, temperature, frequency, period, dB, dBm, and continuity measurements, as well as diode testing. This multi-functional design minimizes added equipment costs when configuring test setups.

Wide Band or Narrow Band Noise Measurements

The Models 2015-P, 2015, and 2016 are capable of measuring both wide band noise and narrow band noise. Alternatively, these instruments' DSP (digital signal processing) capabilities allow users to make frequency domain measurements of RMS voltage noise over the 20Hz–20kHz frequency audio band or a narrow portion of the band. Furthermore, noise measurements can be extracted in the presence of a stimulus signal for fast signal-to-noise computations.

Spectrum Analysis

The Model 2015-P has internal computational capabilities that allow it to characterize an acquired signal spectrum. This instrument can identify and report the frequency and amplitude of the highest value in a complete spectrum or within a specified frequency band. It can also identify additional peaks in descending order of magnitude. The Model 2015-P's on-board capabilities make it simple to obtain a thorough analysis of a frequency spectrum more quickly and with little or no need for external analysis software.

Figure 4. The Model 2015-P directly identifies peak values of the frequency spectrum.

Math Functions

Rel, Min/Max/Average/StdDev (of stored reading), dB, dBm, Limit Test, %, and mX+b with user defined units displayed.

DBM REFERENCE RESISTANCES: 1 to 9999Ω in 1Ω increments.

Standard Programming Languages

SCPI (Standard Commands for Programmable Instruments)

Remote Interface

GPIB (IEEE-488.1, IEEE-488.2) and RS-232C.

Frequency and Period Characteristics [1,2]

ACV RANGE	FREQUENCY RANGE	PERIOD RANGE	GATE TIME	RESOLUTION ±(ppm of reading)	ACCURACY 90 DAY/1 YEAR ±(% of reading)
100 mV	3 Hz	333 ms	1 s (SLOW)	0.333	0.01
to	to	to	0.1 s (MED)	3.33	0.01
750 V	500 kHz	2 μs	10 ms (FAST)	33.3	0.01

FREQUENCY NOTES

1. Specifications are for squarewave inputs >10% of ACV range, except 100mV range. On 100mV range frequency must be >10Hz if voltage is <20mV.
2. 20% overrange on all ranges except 750V range.

Temperature Characteristics

THERMOCOUPLE [2,3,4] TYPE	RANGE	RESOLUTION	90 DAY/1 YEAR (23°C ± 5°C) ACCURACY [1] Relative to Reference Junction
J	–200 to + 760°C	0.001°C	±0.5°C
K	–200 to + 1372°C	0.001°C	±0.5°C
T	–200 to + 400°C	0.001°C	±0.5°C

TEMPERATURE NOTES

1. For temperatures <–100°C, add ±0.1°C and >900°C add ±0.3°C.
2. Temperature can be displayed in °C, K or °F.
3. Accuracy based on ITS-90.
4. Exclusive of thermocouple error.

GENERAL

POWER SUPPLY: 100V / 120V / 220V / 240V ±10%.

LINE FREQUENCY: 45Hz to 66Hz, automatically sensed at power-up.

POWER CONSUMPTION: 25 VA.

OPERATING ENVIRONMENT: Specified for 0°C to 50°C. Specified to 80% R.H. at 35°C.

STORAGE ENVIRONMENT: –40°C to 70°C.

WARRANTY: 3 years.

SAFETY: Conforms with European Union Directive 73/23/EEC, EN 610110-1, UL 3111-1.

EMC: Conforms with European Union Directive 89/336/EEC, EN 55011, EN 50082-1, EN 61000-3-2, EN 61000-3-3, FCC part 15 class B.

WARMUP: 1 hour to rated accuracy.

DIMENSIONS:

Rack Mounting: 89mm high × 213mm wide × 370mm deep (3½ in × 8⅜ in × 14⅝ in).

Bench Configuration (with handle and feet): 104mm high × 238mm wide × 370mm deep (4⅛ in × 9⅜ in × 14⅝ in).

NET WEIGHT: 4.2kg (8.8 lbs).

SHIPPING WEIGHT: 5kg (11 lbs).

VOLT HERTZ PRODUCT: ≤8 × 10^7·Hz.
