Hi, I finally found a link on EEVblog and was able to find and install the new firmware successfully. Thanks!

**Objet :** Re: [HP-Agilent-Keysight-equipment] Keithley 236 firmware version A10

Hi Yves,

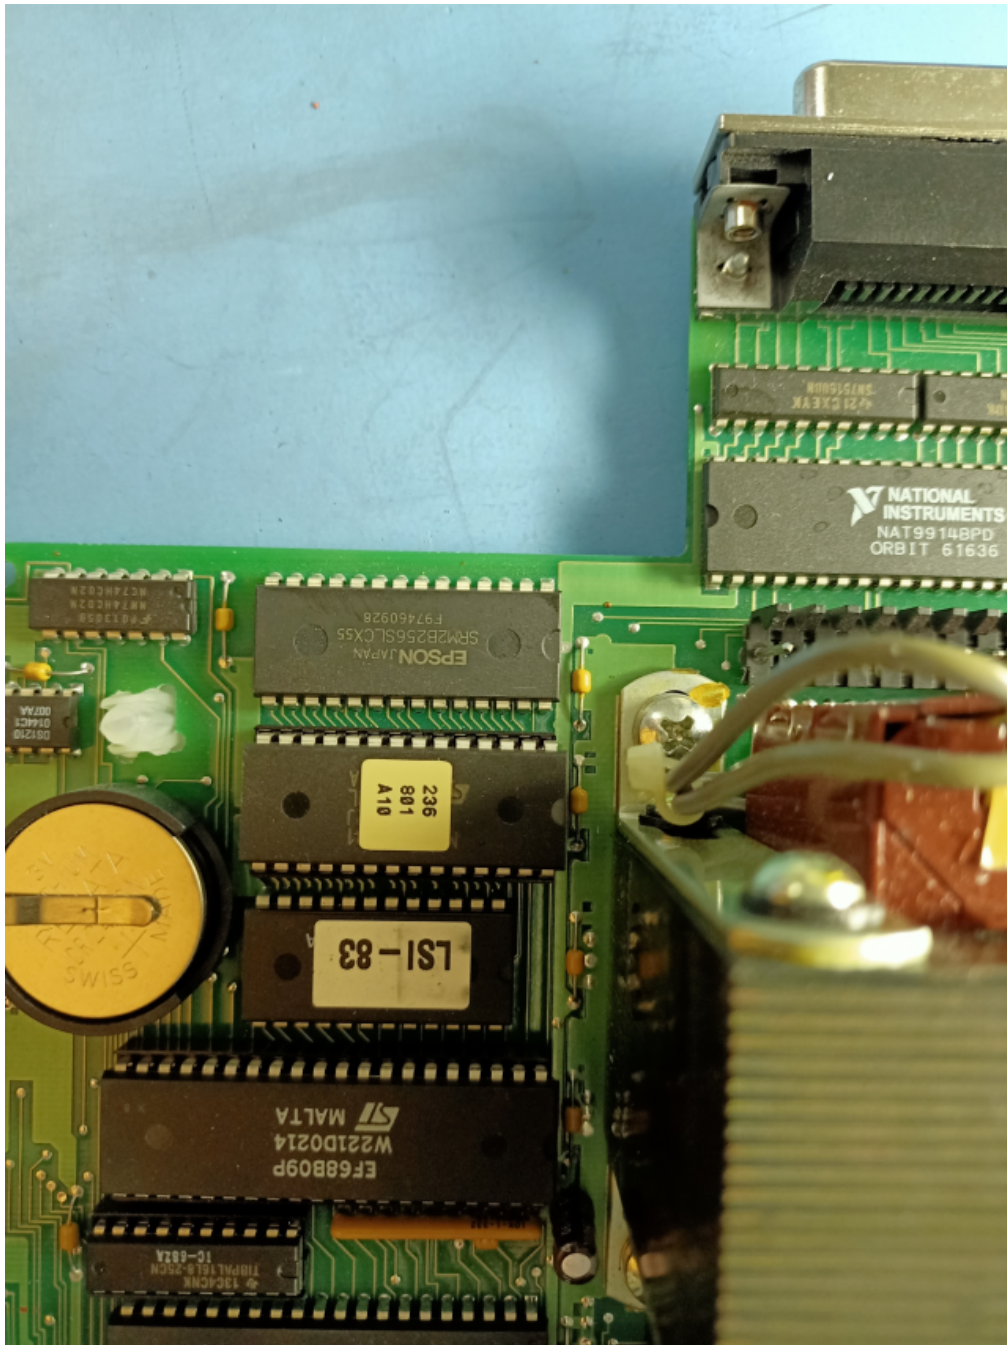

I own a 237 (high voltage version). These devices share the same firmware. Only a resistor on the mainboard decides whether the 236 or the 237 version.

I have the A10 version and can send it to you if you want.

On the mainboard there is a second device which is also marked with a firmware version (236 801 A10). But I don't know if you also need it. Is an EEPROM ev. are there only the calibration data stored.

In an emergency, I also have this data and can send it to you.

Many greetings Rico

Hi,

All the instruments in my lab are mainly HP/Agilent/Keysight, and two from tektronix, but now I have two Keithley sources, a 236 and a 238 functional received very recently.

I was able to find the A10 firmware version for the 238, but I'm still looking for the A10 firmware for the 236, I know it exists but can't find it...does anyone have any information where to find this firmware.

-Yves
