# 1. Overview

## 1.1. Scope

This manual is applied to service and maintenance of FP560 FM portable radios, and is intended for use by engineers and professional technicians that have been trained by Kirisun. It contains all the required service information for the equipment. Kirisun reserves the right to modify the product structure and specifications without notice in order to enhance product performance and quality. You can also contact your local dealer or us to get the latest service manual.

Please read this manual before repairing the product.

## 1.2. Safety Precaution

### Electromagnetic Radiation

Radios will generate and radiate electromagnetic energy during transmit mode. Kirisun radio is designed to comply with national and international standards for human exposure to radio frequency electromagnetic energy. To derive optimal performance, and to guarantee that the electromagnetic radiation does no harm to you, always keep the radio in a vertical position to the ground and make sure that the microphone is 2-5cms from your mouth while using.

### Electromagnetic Interference

In order to avoid electromagnetic interference, please turn off the radio in the place where there is a warning, e.g. hospital, health care center, airport and etc.

### Explosive Atmosphere

It's prohibited to use radios in the following places:

Areas with a potentially explosive atmosphere, e.g. the lower deck of the ship, the storage and transportation equipment for fuel and chemical, places where there are chemical substances, particles, dust or metal dust.

Places near blasting sites or area with electrical blasting cap.

It is also prohibited to change or charge the battery in any area with a potentially explosive atmosphere.

### Antenna

If the antenna is damaged, do not use the radio. Damaged antenna may cause light burning to skin.

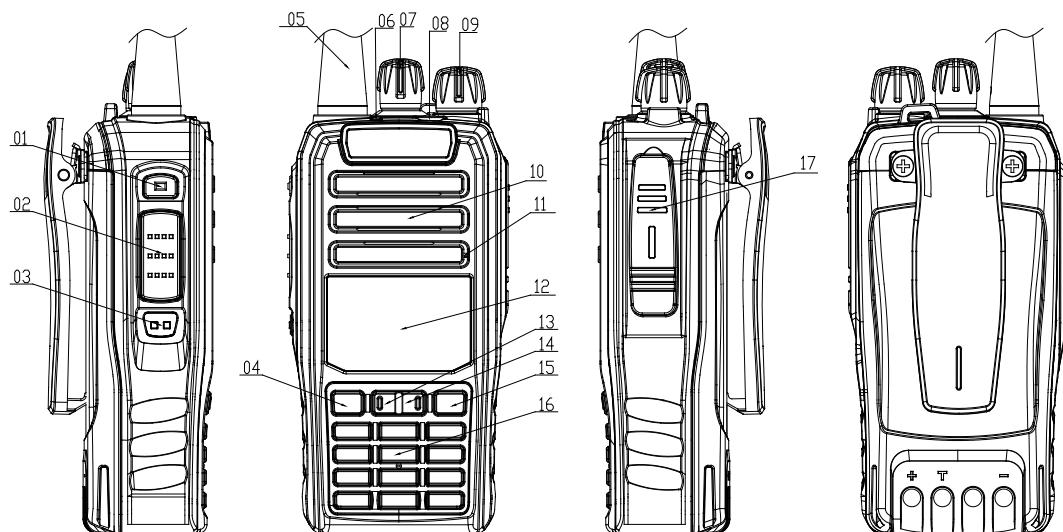

### Replacement Parts

All the components should be supplied by Kirisun.

Please use the components with the corresponding model number for repair. Do not take the risk of using any improper components which are not required in Kirisun's service manual.

## 2. External View and Functional Keys

### 2.1. External View and Functional Keys

No.	Part Name	No	Part Name
01	Side Button 1 (Programmable Button)	02	PTT (PUSH-TO-TALK) Button Press and hold the PTT button and talk to the microphone to transmit; release it to listen.
03	Side Button 2 (Programmable Button)	04	Menu Key Press the menu key and enter the menu in the standby status. During the menu operation, press the key to confirm the option.
05	Antenna	06	LED Indicator The LED indicator glows red when transmitting, and glows green when receiving. The indicator flashes red in the condition of low battery.
07	Channel Knob Rotate to select channel 1-16.	08	Top Key (programmable key)
09	Power/Volume Switch: Rotate the switch clockwise to turn on the radio, and counter-clockwise it until a click is heard to turn off the radio. Rotate the switch to adjust the volume when the radio is powered-on.	10	Speaker

11	Microphone	12	LCD Screen It indicates the operation status of the radio. Please see other chapters for more details.
13	Up Key	14	Down Key
15	Delete Key	16	Digital Keyboard There are 12 keys in total. Press these keys to enter the numbers and edit the text or new contact.
17	Speaker/Microphone interface Open the cover to connect the external speaker and microphone.		

## 2.2. Programmable Button

You can require the dealer to program the keys listed below as shortcuts to certain functions for your convenience:

- Long press key and short press key can be set: side button 1, side button 2
- Long press key can be set: menu key, delete key

**Note:**

- Short Press: Press and release it quickly.
- Long Press: Press and hold it down for 2 seconds, then release.

Available Functions	Description
None	No feature will be enabled.
Zone up	If the radio has multiple zones, the user can press the button to change the zone from small to large.
Zone down	If the radio has multiple zones, the user could press the button to change the zone from large to small.
Power Level Adjustment	Switch to high/low power.
Squelch level adjustment	Signal strength needed when adjusting RX signal
Scan	Receives the activity of other channels. Press the button to switch on/off the feature.
Nuisance (temporary) Delete	Delete the channel that is not currently needed when scanning.
Digital Encryption Enable/Disable	Enable/disable Encryption on the channel that supports encryption feature.
Channel Announce	Announces the current channel.
Talkaround	Select repeater/talkaround mode on the channel that allows using repeater.
VOX enable/disable	Enable/disable VOX.

Monitor Mementary	If there is CTCSS on the current analog channel, press the key and switch to carrier squelch mode to cancel the CTCSS feature; the voice will be output when the carrier is matched. Release the key to go back to the original status.
Monitor	If there is CTCSS on the current analog channel, press the key and switch to carrier squelch mode to cancel the CTCSS feature; the voice will be output when the carrier is matched; press the key again to go back to the original status.
Sequelch off momentary	When this key is pressed, the sequelch feature will be invalid, and the user can hear the weak signal on the channel. Release the button to recover the sequelch feature.
Cancel Squelch	Disable Squelch to receive the weak signals on the analog channel
Emergency Alarm On	Enable the emergency alarm feature to seek help.
Emergency Alarm Off	Disable the emergency alarm feature.
VOX Electric Level Selection	Adjust the strength of VOX triggering electric level.
Battery Check	Check the current battery power.
Whisper	Enable/disable Whisper. The receiver can hear clearly when you speak in a low voice when this feature is enabled.

## 2.3. LED Indicator

- The LED lights up red when transmitting
- The LED lights up green when receiving
- The LED flashes red in the condition of low battery.

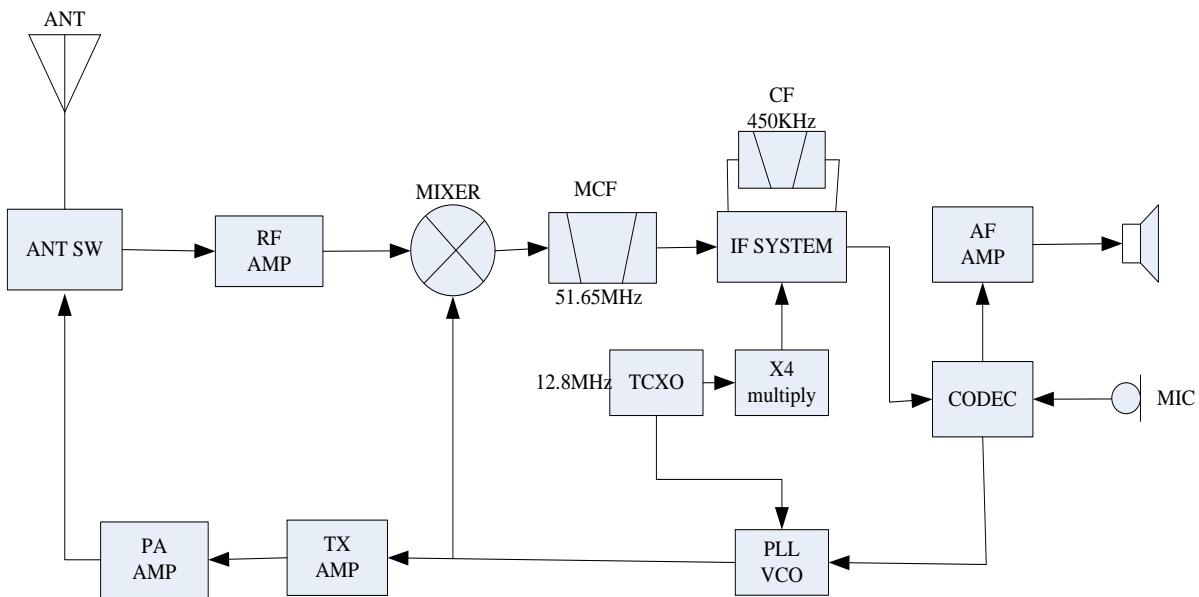

## 3. Circuit Description

### 3.1. Overview

This radio is FM portable equipment.

### 3.2. Frequency Composition

Figure 3-1 Circuit Diagram

This Radio applies twice frequency mixing method. The first intermediate-frequency is 51.65MHz. The second intermediate-frequency is 450kHz.

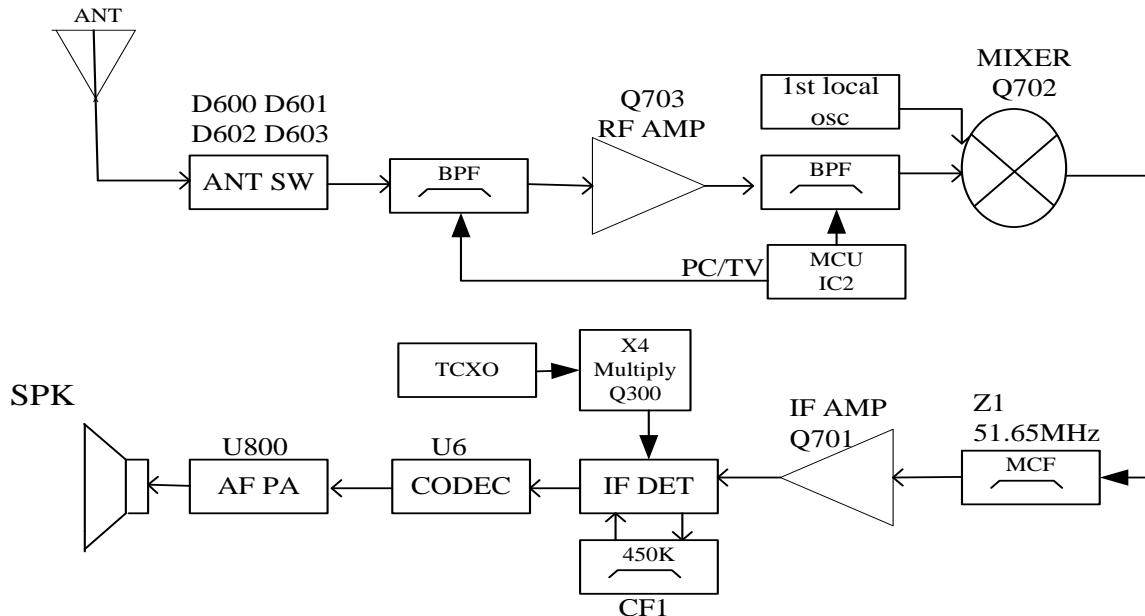

The first local oscillation is generated by frequency synthesizer, and the second local oscillation is generated by the quadruple frequency of 12.8MHz.

The transmitting signal is generated by frequency synthesizer.

The reference frequency of frequency synthesizer is generated by TCXO.

### 3.3. Principle of Receiver (RX)

Figure 3-2 Principle of Receiver

- **Receiver Front End**

Signals from the antenna through the receiving/transmission (RX/TX) switch (D600, D601, D602, D603),

which passed the band-pass filter (BPF) consisting of two levels of LC to eliminate the unnecessary signals, then sent to the low noise amplifier (LNA) consisting of Q703 and its peripheral components for enlargement.

After passing the band-pass filter (BPF) consisting of three levels of LC to further eliminate the unnecessary out-of-band signals, the output of LNA is then sent to the first frequency mixer (Q702).

- **The First Frequency Mixer**

The signal from LNA is mixed with the first local oscillator signal from the frequency synthesizer to generate the first intermediate-frequency signal (51.65MHz).

- **IF Circuit**

The first intermediate-frequency signal eliminates the signals from the adjacent channels or other signals through the crystal filter. (Z1)

The first intermediate-frequency signal from the crystal filter, after being amplified by the first intermediate-frequency (IF) amplifier (Q701), is sent to IF processing IC (IC700, GT3136).

IF IC consists of the second frequency mixer, IF amplifier, amplitude limiter, frequency detector, noise amplifier, audio low pass filter.

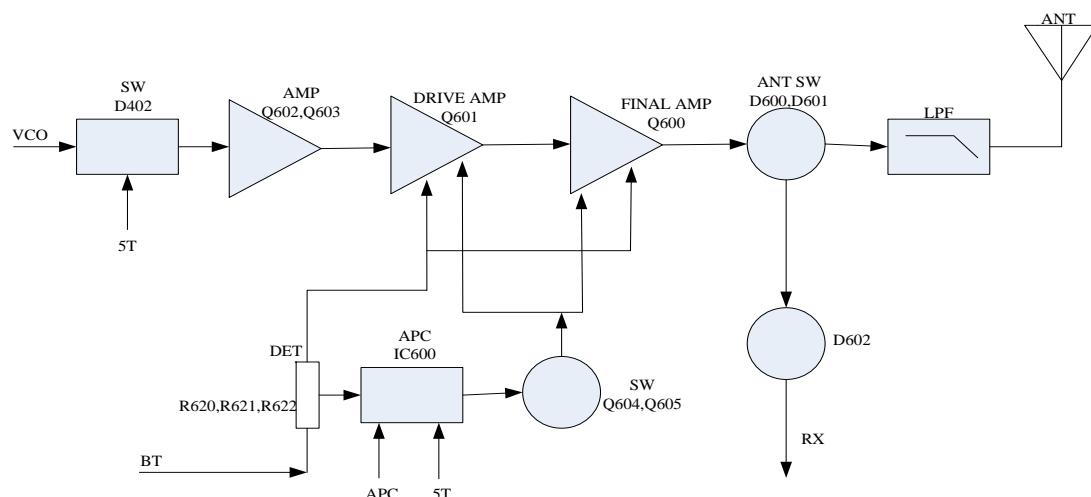

The 12.8MHz signal from X300, being amplified by Q300 and its peripheral circuit, becomes the second local oscillation signal (51.2MHz). The second local oscillation signal (51.2MHz) mixes with the first intermediate-frequency signal (51.65MHz) in IC700 to generate the second intermediate-frequency signal. The second intermediate-frequency signal amplified in IC700 with its amplitude being limited, being filtered by the FD1 ceramic filter (450 kHz), is demodulated by IC700 to generate the audio signal.

- **Squelch Circuit**

The signal demodulated by IC700 is sent to its own noise amplifier for amplification, and the amplified signal is sent to Q700 for further amplification and to D701 for detection; the produced direct current is then sent to MCU squelch control circuit, and its voltage is inversely proportional to the input signal.

### 3.4. Principle of Transmitter (TX)

Figure 3-3 Diagram of Power Amplification and Antenna Switch Principle

The modulated RF signal from VCO, being amplified by Q303, Q304, Q602, Q603, Q601, is sent to Q600 for power amplification.

The grid bias of Q601 and Q600 is controlled by APC (Automatic Power Control) circuit. Change the grid bias voltage to easily control the output power strength of the transmitter.

#### • APC (Automatic Power Control) Circuit

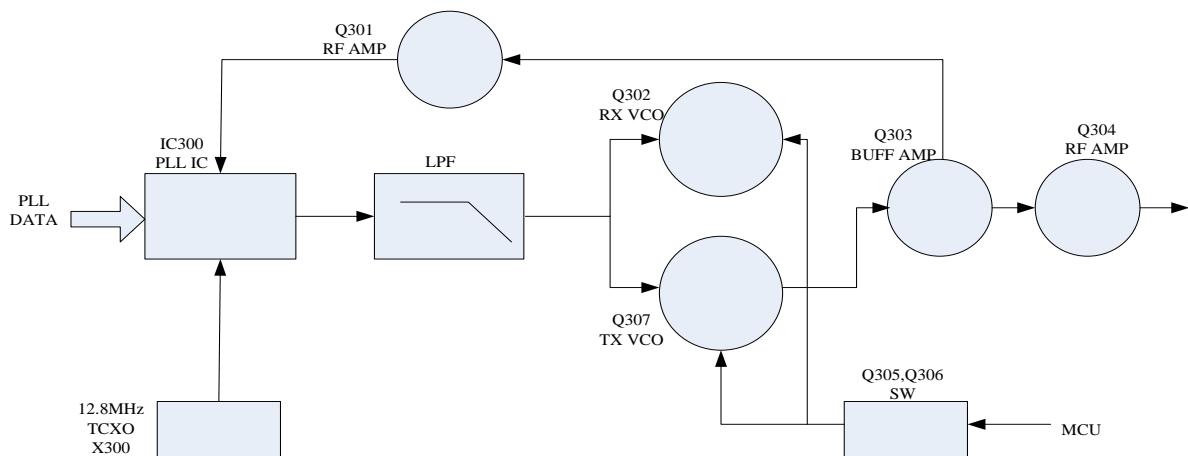

R620, R621 and R622 are power amplifier current detection, and IC600A is a power amplifier current sampling amplifier. IC600B is a power comparison amplifier.

The extra high output power of the transmitter will increase the power amplifier current and IC600A output with a decrease in IC600B output voltage. It will also decrease the bias voltage on Q601 and Q600, which decreases the output power of the transmitter, and vice versa. This enables the stability of the output power in different working circumstances.

MCU changes the voltage being input to IC600B to set the power.

### 3.5. Principle of Frequency Synthesizer

Figure 3-4 Diagram of Frequency Synthesizer

This radio applies PLL frequency synthesizer.

The frequency synthesizer consists of reference oscillator, voltage controlled oscillator (VCO), programmable frequency divider, phase comparator and low pass filter.

Q307, D305, D306, D307, D308 and other resistance-capacitance units make up the transmitting VCO unit. D304 is the modulation circuit of the transmitting VCO.

Q302, D300, D301, D302, D303 and other resistance-capacitance units make up the receiving VCO unit.

IC300 (MB15E03) is a PLL integrated circuit which contains a programmable reference frequency divider, programmable frequency divider, phase comparator and charge pump.

R329, C358, R330, C359, R331, R332 and C360 make up the loop filter.

The reference frequency is provided by X300 (Temperature Controlled Crystal Oscillator).

The reference frequency from TCXO (Temperature Controlled Crystal Oscillator) is divided by the

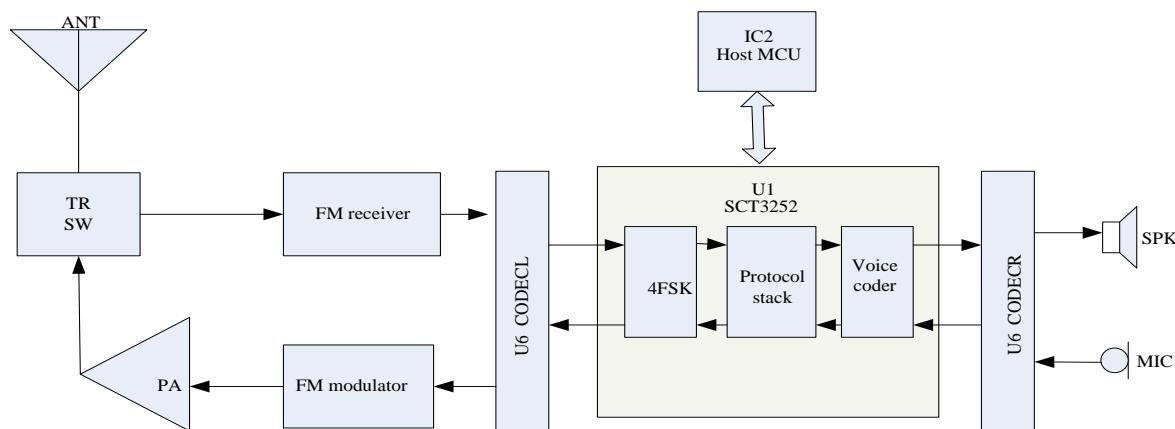

programmable reference frequency divider in IC300 to become the 5kHz or 6.25kHz (controlled by MCU, according to the setting channel) reference frequency .

The oscillation frequency from VCO, being amplified by the two-time frequency multiplier circuit, is sent to IC300 for comparison with reference frequency after being divided by the programmable frequency divider, and the error signal is then generated to change the oscillation frequency of VCO after filtered by the low pass filter. VCO is locked when the frequency of VCO reaches a certain set value.

**Loss of Lock Detection:** When PLL loses its lock, IC300 pin14 outputs the electric level signal to MCU, and MCU control transmitter forbids transmitting and issues an alert tone. The output voltage of IC300 pin14 is high electric level when it is locked.

### 3.6. Audio Processing Circuit

Figure 3-5

- **MIC Signal Processing**

The speech signal from MIC is sent to U6 for A/D switch, and sent to U1 SCT3252 for audio coding/decoding, communication protocol processing, channel coding modulation. Afterwards, the signal outputs MOD2 and MOD1 separately from U6, and then sends them to TCXO and VCO for two-point modulation. The signal outputs 4FSK modulating signal in digital state, and sine wave signal in analog state.

- **Receiving Audio Signal Processing**

The audio signal demodulated from IC700 is sent to U1 SCT3252 for processing after finishing A/D switch by U6. After the audio encoding/decoding, communication protocol processing and DSP, the audio signal is sent to U6 for D/A switch, and it is then output to the U800 (TDA2822) audio power amplifier for amplification so as to sound the speaker.

**Squelch Circuit:** It is output from IC700 after demodulation, and it filters out the noise from the demodulated signal after going through the filter circuit. It is sent to MCU after being detected by D701 and amplified by Q700. The MCU identifies the noise level and controls the squelch.

**Speaker Impedance:** 16 Ω

**Note:** Any terminal of the speaker must not be attached to the ground!

The emergency alert tone is not controlled by volume.

### 3.7. Power Supply

This radio applies 7.4V battery. The transmitter power amplifier circuit (Q601, Q600) and receiver audio processor (U800) directly use the battery for power supply with other circuits using the voltage stabilized 5V for power supply.

Q102: 5T switch, controlled by MCU.

5T: Supplies power for the transmitter front end.

Q100: 5R switch, controlled by MCU.

5R: Supplies power for the receiver RF amplifier, frequency mixer, IF processor, audio signal processor and the like.

Q1: 5C switch, controlled by MCU.

5C: The 5V power source controlled by power saving, and it supplies power for frequency synthesizer unit.

### 3.8. MCU Unit

MCU unit controls every unit operation of the radio to perform all the radio functions.

- Communicates with the external PC
- Deposits and withdraws the radio status data
- Controls PLL to generate the local oscillation frequency of receiving and transmitting
- Acquires the current channel status
- Controls the LED status indication
- Controls the power supply status of every unit
- Detects the operation of every function key
- Generates CTCSS signal
- Generates DCS signal
- Generates power-controlled signal
- Completes CTCSS decoding
- Completes DCS decoding
- Squelch detection and control
- Controls the content of voice prompt

### Memorizer (E2PROM, AT24LC512BN)

It stores the radio channel data, CTCSS/DCS data, other function setting data and parameter adjustment

data.

## **CTCSS/DCS Signal Encoding and Decoding:**

The CTCSS/DCS signal generated by MCU is sent separately to VCO and TCXO for modulation.

The CTCSS/DCS signal from the receiver is sent to MCU for decoding. The MCU identifies whether the CTCSS/DCS signal of the radio is the same as the receiving signal so as to turn on the speaker.

### **CTCSS**

CTCSS (continuous tone control squelch system) is a squelch control system modulated on the carrier with the CTCSS signal being the pilot frequency. If the CTCSS feature is set, the conversation is enabled only when the CTCSS frequency from the receiver and transmitter is the same to avoid interference from other signals.

39 groups of standard CTCSS frequency of this radio are available. See Chart 1.

CTCSS signal is generated by MCU (PWM wave form), and it is sent to VCO for modulation after being filtered by the low pass filter composed of RC for eliminating the frequency higher than 300Hz.

Chart 3-1 CTCSS Frequency Chart

No.	Frequency [Hz]						
1	67.0	11	94.8	21	131.8	31	186.2
2	69.3	12	97.4	22	136.5	32	192.8
3	71.9	13	100.0	23	141.3	33	203.5

9	88.5	19	123.0	29	173.8	39	250.3
10	91.5	20	127.3	30	179.9		

### DCS Signaling:

DCS (Digital code squelch) is a continuous numerical code which is modulated along with the speech signal on the carrier to control the squelch. If the DCS feature is set, the speaker is on only when the same DCS code is received to avoid the unnecessary signal interference.

83 kinds of standard code of this radio are available. See chart 2.

DCS signal is generated by MCU (PWM wave form), and it is sent to VCO and TCXO for modulation after being filtered by the low pass filter composed of RC for eliminating the frequency higher than 300Hz. VCO modulates the high frequency of DCS signal and TCXO modulates the low frequency of DCS signal.

CTCSS/DCS signal from the receiver is sent to MCU for decoding. MCU identifies whether the receiving signal has the same DCS code as the radio so as to turn on the speaker.

D305,D306 D307,D308	HVC376	TX VCO oscillation varactor diode
D300,D301 D302,D303	HVC376	RX VCO oscillation varactor diode
D402	HSC277	VCO output switch

D604	HZU5ALL	APC output limited voltage diode
D600,D601 D602,D603	HVC131	Transmitter antenna switch diode
D704,D705,D 706,D707 D708	HVC355B	RX band pass filter varactor diode
D701	RB706F	Commutation diode

## 4. Function Description and Parameter Settings

### 4.1. Time-out Timer

This feature prevents the user from long occupation on the channel. If the transmitting period exceeds the dealer's preprogrammed time, the radio stops transmitting and rings alert tone. To stop the alert tone, please release the PTT button. For a second transmission, please press the PTT button after a certain period (set by the dealer). If the dealer preprograms the pre-warning feature, a warning is given when the transmitting period gets close to its time-out-timer limitation, indicating the transmission is forbidden soon.

### 4.2. Channel Scan

The channel scan is able to search for the channel where there is a signal, and the radio stays on the channel where a signal is detected for making a conversation. The scanning mode is the carrier control scan.

#### 4.2.1. Carrier Control Scan

The radio scan stays on a busy channel until it is no longer busy, and the scan is enabled automatically after a certain period (the specific period time is set by the local dealer).

Press the Scan shortcut key, and the radio scans the scan list of the current channel. When the radio is scanning, you can press the "Scan" shortcut key to stop the scanning.

#### 4.2.2. Scan Reply Channel

When the radio is scanning, press the PTT button to transmit and make a conversation on a preset channel, and the channel is preprogrammed by the local dealer.

### 4.3. Kill and Activation

If the dealer preprograms this feature, the radio can receive and decode other radio's signals of kill and activation before responding accordingly. After being killed, the radio can only receive the activated signal without being able to transmit or receive other signals. The radio is back to normal after activation.

## 4.4. Emergency

In a state of emergency, press the “Emergency On” button (the button is programmed as the “Emergency On” button) for the alarm call. To disable the emergency feature, please press the “Emergency Off” shortcut key or restart the radio.

The alarm method is composed of two parts:

- Alarm type: mainly specifies the acoustooptic reaction in the state of alarm call.
- Alarm mode: specifies the content sent in the state of alarm call. You can set these parameters through the dealer to meet your requirements.

### Alarm Mode:

- None: No alarm feature (by default), and the alarm feature cannot be enabled by pressing the emergency button.
- Siren Only: The radio only emits siren locally.
- Regular: The acoustooptic alert can be enabled, and the radio is able to receive.
- Secret: No acoustooptic alert and the radio is not able to receive.
- Secret but receivable: No acoustooptic alert but the radio is able to receive.

### Alarm Mode:

- Emergency Alarm: After the alarm feature is enabled, the radio only transmits an emergency alert, and afterwards, then automatic exit the alarm status.
- Emergency Alarm + Emergent Call: The radio transmits an emergency alarm and sends out an emergency call by pressing the PTT button.
- Emergency Alarm + Auto Transmission of Background Tone: The radio transmits an emergency alarm, and the background tone will be sent out periodically and automatically in the way of emergency call.

### Note:

- Emergency Alarm: A non-speech signal transmitted by the radio to inform other radios to send out an alert.
- Emergency Call: A call mode in the priority of using the channel to ensure a successful call during emergency.

## 4.5. Parameter Settings

The radio is preset before the factory delivery, but the parameter of the digital feature, operational frequency, channel, QT/DQT, and auto scan feature may be reset according to different requirements of the customers. Hence, Kirisun designed a Chinese/English FP520 programming software with friendly interface, easy operation and clear visual display to complete the parameter settings for FP520.

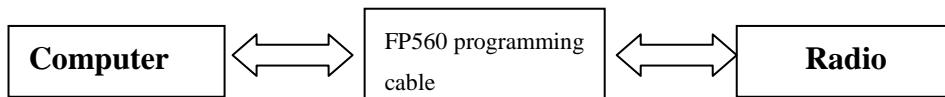

Procedure of setting the parameter with a computer.

- A. Install the FP520 programming software on the computer.

B. As Figure 4-1 shows, using the FP520 programming cable to connects the computer with the radio

Note: During the connection, ① make sure the computer is off. ② make sure the radio is off.

Figure 4-2

- C. Turn on the computer.
- D. Turn on the Radio.
- E. Click the execution procedure, and operate FP520 programming software.
- F. In the main menu of FP520 programming software, click "read" menu to input the radio parameter into the computer.
- G. For detailed operation, please refer to the "assistance" file of the programming software.

## 5. Assemble and Disassemble Instructions

This radio is sophisticated communication equipment with a precise and compact mechanism. The assembly and disassembly of the radio must be carefully done during the repair.

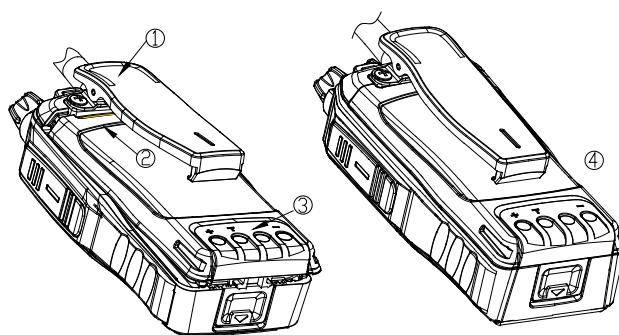

The description is as follows:

### 5.1. Attaching and Detaching the Battery

#### Attaching the battery

Press ① to bounce the belt clip; align the two bulges on the battery top with the corresponding slots on the aluminum shell, and insert the battery into the aluminum shell in the direction as ② shows. Press the battery bottom as ③ shows to completely bounce the latch, and the battery is attached until the battery is hooked as ④ shows (see Figure 5-1).

Figure 5-2

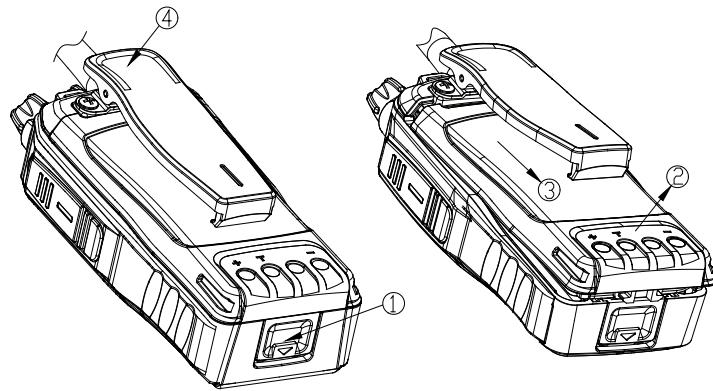

#### Detaching the Battery:

Make sure the radio is off when detaching the battery.

To detach the battery, please push the battery latch as ① shows to bounce the bottom of the battery as

② shows, and take out the battery as ③ shows; if the belt clip is attached, please press it as ④ shows and detach the battery downwards.

Figure 5-3

**Notes:**

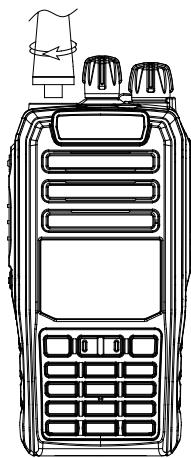

- Do not short circuit the battery terminals or abandon the battery into fire.
- Do not take the risk of disassembling the battery shell.

## 5.2. Attaching the antenna

When attaching, put the antenna end with screw thread into the threaded hole of the radio top, and turn it clockwise until it is fastened.

For detaching, hold the antenna bottom and turn it counterclockwise.

Figure 5-4

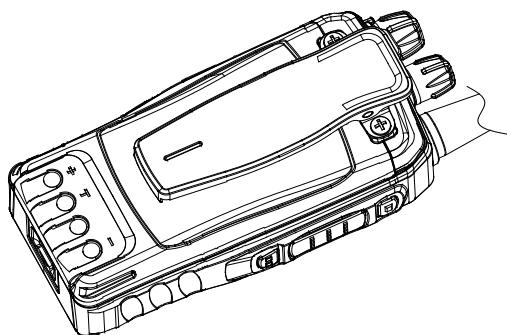

## 5.3. Attaching and Detaching the Belt Clip

When attaching, align the screw holes of the belt clip with the corresponding ones of the radio back shell, and use two 2.5x8.0 machine screws to fasten.

Loosen the two 2.5x8.0 machine screws to detach the belt clip.

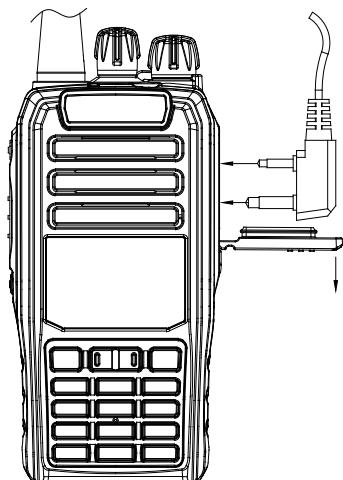

Figure 5-5

## 5.4. Attaching and Detaching the Earphone

When the earphone is needed, open the earphone cover on the upper right side of the radio, and put the earphone plug into the interface.

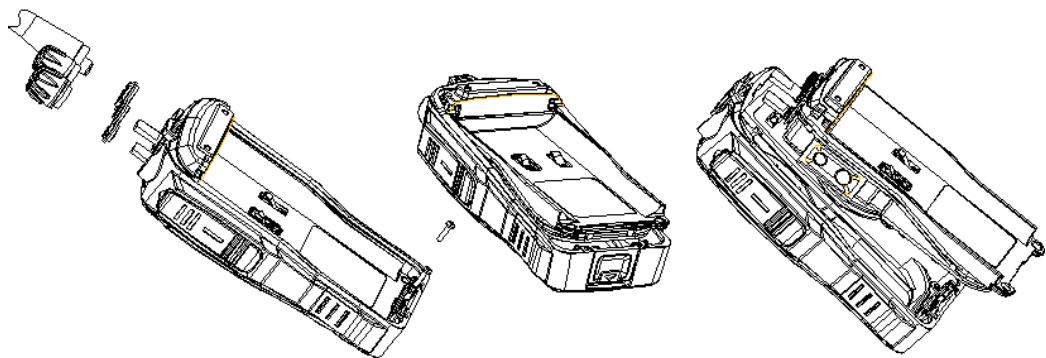

Figure 5-6

## 5.5. Separating the Front Cover from the Chassis

1. Remove the antenna, volume knob and channel knob;
2. Remove the two knob nuts and one antenna nut;
3. Remove the two aluminum screws with wabblers;
4. Use a pair of tweezers or other tools to lever open the bottom;
5. Pull out the Front Cover;
6. Use an electric soldering iron to cut off the speaker wire and MIC wire, and the separation is done.

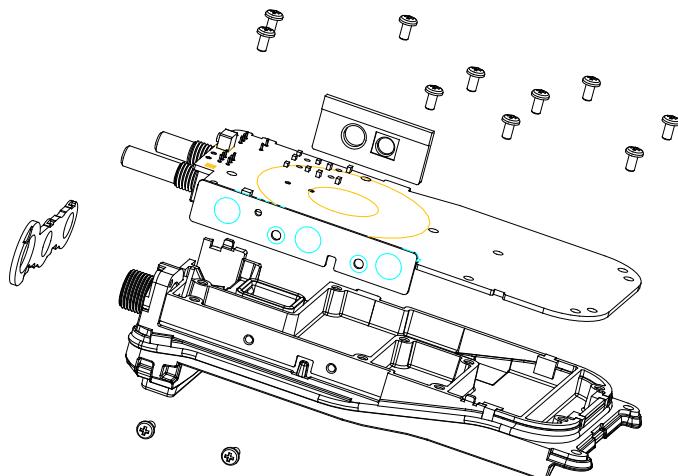

Figure 5-7

## 5.6. Separating the PCB Board from the Chassis

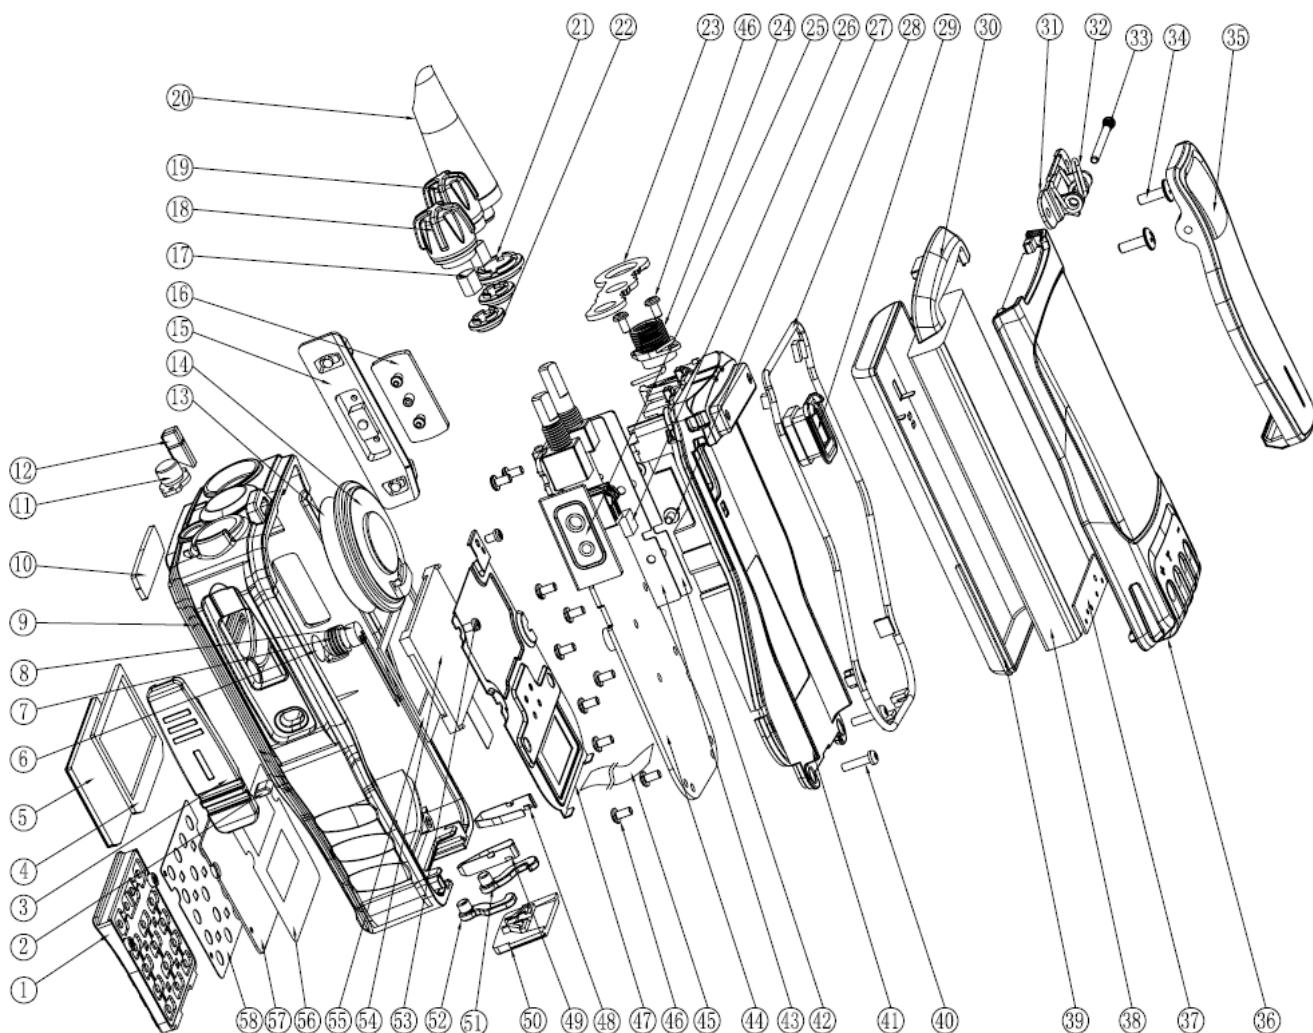

1. Remove the potentiometer waterproof pad on top;
2. Remove the earphone waterproof plug;
3. Remove the screws on the PCB mainboard;
4. Remove the two screws on the side PTT PCB;
5. Use an electric soldering iron to cut off the antenna terminal and the PCB board is removed. (PTT PCB is connected with the PCB mainboard. To avoid bonding pad damage, use an electric soldering iron to separate them instead of dividing them with force)

Figure 5-8

After the disassembly above is completed, the repair and adjustment can then be done.

## 5.7. Exploded View

No.	Part Number	Description	Quantity	Remark

## 6. Adjustment

### 6.1. Components of Adjustment

During the service, a proper test and adjustment to the radio's technical criteria is necessary after changing the components.

#### 6.1.1. Components needed for the adjustment

- (1) antenna interface convertor
- (2) universal interface

#### 6.1.2. Manual Mode Adjustment

The radio needs adjustment of 5 frequencies.

The frequencies selected by the channel switch are shown in the chart below:

Model	Channel 1	Channel 2	Channel 3	Channel 4	Channel 5
FP560 VHF	136.05MHz	145.55MHz	155.05MHz	164.55MHz	173.95MHz
FP560 UHF	400.05MHz	415.05MHz	435.05MHz	455.05MHz	469.975MHz

## 6.1.3. Computer Adjustment Method

### VCO Part

The radio is receiving:

- a) The channel is on the receiving high frequency, adjust C335 and test T300, the spot voltage is  $3.6 \pm 0.1V$ .
- b) The channel is on the receiving low frequency, test T300, the spot voltage  $>0.6V$

The radio is transmitting :

- a) The channel is on the transmitting high frequency, adjust C371 test T300, spot voltage as  $3.6 \pm 0.1V$
- d) The channel is on the transmitting low frequency, test T300, the spot voltage  $>0.6V$

### TX Part

#### 1). Transmitting Frequency

Under the computer mode, the transmitting frequency is adjusted within  $\pm 100Hz$ .

#### 2). Power

- a. Under the computer mode (transmitting high power) (5 frequencies), the transmitting high power is adjusted to 3.8-4.2W.
- b. Under the computer mode (transmitting low power) (5 frequencies), the transmitting low power is adjusted to 0.8-1.1W.

#### 3). The Maximum Frequency Deviation (the modulation signal is 1kHz/120mV)

Under the computer mode [the maximum audio frequency deviation] (the broadband has five frequencies and the narrowband has one; six frequencies in total), adjust the maximum transmitting frequency deviation to 1.8-2.5 kHz.

#### 4). DCS Balance

Under the computer mode, [DCS balance] (the broadband has five frequencies), adjust the DQT and make it balanced, so the demodulated DQT wave can be square and smooth.

#### 5). DCS Frequency Deviation (DQT: 023N)

Under the computer mode [DCS frequency deviation], adjust DCS frequency to 0.3-0.5kHz.

#### 6). CTCSS Frequency Deviation (QT: 67.0Hz, 150.4Hz, 250.4Hz)

Under the computer mode [CTCSS (67Hz, 150.4Hz, 250.4Hz) frequency deviation] adjust the CTCSS frequency deviation to 0.3-0.5kHz.

#### 7). DTMF Frequency Deviation

Under the computer mode [DTMF frequency deviation] (five frequencies), adjust the DTMF frequency deviation to 1.5-2 kHz.

#### 8). Battery low voltage indication when transmitting: the voltage is set as 6.8V, under the computer mode

[transmitting low voltage], click OK when the digits are stabilized.

## RX Part

### 1). Receiver Pass Band

- a. Program the spectrum analyzer, and test the receiver pass band at the test point with a high frequency probe.
- b. Under the computer mode [receiving sensitivity] (five frequencies), adjust the receiver pass band to the corresponding center frequency.

### 2). The Maximum Volume

Set the RF frequency as the center frequency, the signal strength as 1mV, and the modulated frequency deviation as 1.5 kHz. Under the computer mode, set the computer audio power as 1.1-1.3W.

### 3). First Level Squelch Adjustment

- a. Set the RF signal as -121dBm and the modulated frequency deviation as 1.5 kHz. Under the computer mode (on) (five frequencies), click OK when the digits are stabilized.
- b. Set the RF signal as -123dBm and the modulated frequency deviation as 1.5 kHz. Under the computer mode (off) (five frequencies), click OK when the digits are stabilized.

### 4). Field Strength

- a. Set the RF signal as -121dBm and the modulated frequency deviation as 1.5 kHz. Under the computer mode (low RSSI) (five frequency points), click OK when the digits are stabilized.
- b. Set the RF signal as -70dBm and the modulated frequency deviation as 1.5 kHz. Under the computer mode (high RSSI) (five frequency points), click OK when the digits are stabilized.

## 6.2. Radio Test

The following criteria should be tested:

## RX Part

1. Sensitivity: <=-120dBm (0.25uV) 12dB SINAD

2. Distortion: <=5%

3. Current: static current: <=100mA

RX working current: <=400mA

4. QT/DQT decode: when <=-116dBm (0.35uV), the radio decodes correctly.

5. Sensitivity of the 3rd squelch off: when RF input  $\leq$ -124dBm 时, the squelch should be turned off.

6. Sensitivity of the 3rd squelch on: when RF input  $\geq$ -119dBm, the squelch should be turned on.

## TX Part

1. Output power: High (3.8W---5W); low (0.9W---1.1W)

2. TX current: High power transmitting <= 1.6A; low power transmitting<=1.0A

3. The maximum frequency deviation: 1.8kHz---2.5kHz
4. TX distortion: <=5%
5. QT/DQT frequency deviation: 0.3---0.5kHz with fine wave form.
6. TX frequency deviation: Nominal frequency +/-500Hz
7. DTMF frequency deviation: 1.5~2.0 kHz
8. FFSK frequency deviation: 1050Hz+/-50
9. Under voltage Indication: The voltage is 6.6V, the indicator glows red when PTT is pressed; no TX power.

## 7. Major Specifications

General Specification	
Model	FP560
Frequency Range	UHF: 400-470MHz VHF: 136-174MHz
Modulation Method	4FSK
Channel Capacity	256
Channel Spacing	6.25kHz/12.5kHz
Intermediate Frequency	The first IF: 51.65MHz the second IF: 450kHz
Operation Voltage	7.5V negative pole is connected to the ground
Operation Temperature	-25°C ~ +55°C
Antenna Impedance	50Ω
Microphone Impedance	2.2kΩ
Battery (Standard)	Li-ion battery DC 7.4V , 1500mAh, duration:12.5 hours
Dimension	118.2mm x55.7mmx32.9mm
Weight	270 (with battery and antenna)

<b>RX Part</b>	
Sensitivity (12dB SINAD)	$\leq 0.25\mu V$
Squelch-On Sensitivity	$\leq 0.18\mu V$
Receiver Residual Output	$\leq -35dB$
Modulated RX Bandwidth	$\pm 3.5kHz$
Adjacent Channel Selectivity	$\geq 50dB$
Intermodulation Interference Rejection	$\geq 65dB$
Spurious Response Rejection	$\geq 70dB$
Audio Output Power	1.3W, BTL@distortion $\leq 10\%$ , $16\Omega$
RX Consumption Current	$\leq 400mA$
<b>TX Part</b>	
Tx Power	4.0W/1.0W @7.5V DC
Frequency Stability	$\leq \pm 2.5ppm$
The Maximum Modulated Frequency Deviation	$\pm 2.5kHz$
Modulation Distortion (300~3000Hz)	$\leq 3\%$
Adjacent Channel TX Power	$\geq 60dB$
Spurious TX	$\geq 70 dB$
Residual Modulated Frequency	$\geq 40 dB$
TX Consumption Current	$\leq 1.7A@7.5V DC$

## 8. Maintenance and Test Equipment

During the service and test, the following equipment and apparatus are needed.

Equipment	Specification
Standard Signal Generator	Frequency Range: 400- 470MHz Modulation: FM and External Modulation Output: $-127\text{dBm}/0.1\mu\text{v}$ or $\geq -47\text{dBm}/1\text{mv}$
Power Meter	Input Impedance: $50\Omega$ Operation Frequency: 400 - 470MHz Measurement Range: about 10W
Deviation Meter	Frequency Range: 400-470MHz
Digital Voltmeter	Measurement Range: DC 10mv - 10v Input Impedance: high input impedance for the minimum circuit load
Oscilloscope	Frequency Range: DC - 30MHz
High Sensitivity Frequency Counter	Frequency Range: 50Hz - 10KHz Frequency Stability: 0.2ppm or lower
Ammeter	Maximum Current: 5A
Audio Voltmeter	Frequency Range: 50Hz - 10KHz Volt Range: 1mv - 10v
Audio Generator	Frequency Range: 50Hz - 5KHz or higher Output: 0 - 1v
Spectrum Analyzer	Measurement Range: DC - 1GHz or higher
Path Generator	Center Frequency: 50KHz - 600MHz Output Voltage: 100mv or higher
16Ω Dummy Load	About $16\Omega$ , 3W
Adjustable Power Supply	5v - 10v, about 5A

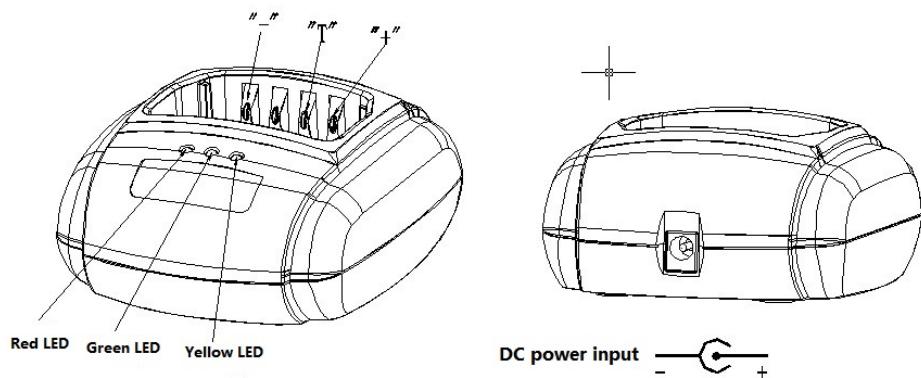

## 9. KBC-51 Charger

### 9.1. The Operational Conditions and Basic Specification of Charger

- a) Battery Specification: Li-ion (2\*3.7V) ,battery capacity (1~2.4AH).
- b) Power Adaptor Specification: DC 11V~16V, 500~1500mA power adaptor, standard voltage is 12V.
- c) No-load Input Current:  $\leqslant$  15mA
- d) Precharged Current: 200 mA $\pm$ 40 mA
- e) Precharged Time Limit: 15Min
- f) Constant Current Charging Current: 800mA $\pm$ 40 mA
- g) Maximum Li-ion Charging Voltage: 8.32~8.42V.

### 9.2. Function Introduction

1. This charger is intelligent with fast charging, reliability, safety and high charging saturation.
2. Status Indication: The indicator flashes red for precharging and lights red for charging; it lights green for full charging, no battery and battery protection; it flashes yellow for battery output short circuit.
3. The external port identifies the lithium battery.
4. Battery Short Circuit Protection: When there is a short circuit in the negative and positive pole of the charger, the indicator flashes yellow and the charging current will be cut off. The charging will continue automatically after troubleshooting.
5. The full battery is recharged for identification: When the full Li battery is recharged, if the voltage is higher than 8.25V, the charging stops, and if it is lower than 8.25V, the charging continues.
6. Temperature Protection: When the Li-ion battery is charging, the charging stops with the yellow light on if the temperature is higher than 55 degrees. The charging is restarted when the temperature is down to 45 degrees.
7. Put the radio on the charger when it is on standby mode, and the charging automatically begins when the battery voltage is lower than 8.2 V.
8. The yellow light indicates the charger automatic protection. The charging is restarted after the troubleshooting.

LED lights red: Charging

LED lights green: Full battery

LED lights yellow: Abnormal charging

## 10. Troubleshooting

No.	Problem	Cause and Solution
1	Power-on Failure	A. The battery pack may be out of power. Please charge it or change to a new one, then try again. B. Power switch failure. Change to a new power switch. C. CPU failure. Change to a new CPU. D. Protective tube F100 failure. Change to a new protective tube.
2	PLL is unlocked (beeping)	A. The PLL crystal oscillator X300 is broken, please change to a new one. B. The oscillation tube is broken, please change to a new one. C. The PLL chip IC300 is broken, please change to a new one.
3	Communication Failure	A. The frequency is not the same. Please reselect a channel with the same frequency B. The signaling codes of CTCSS/DCS are different, please reset them with the computer. C. Beyond the communication range.

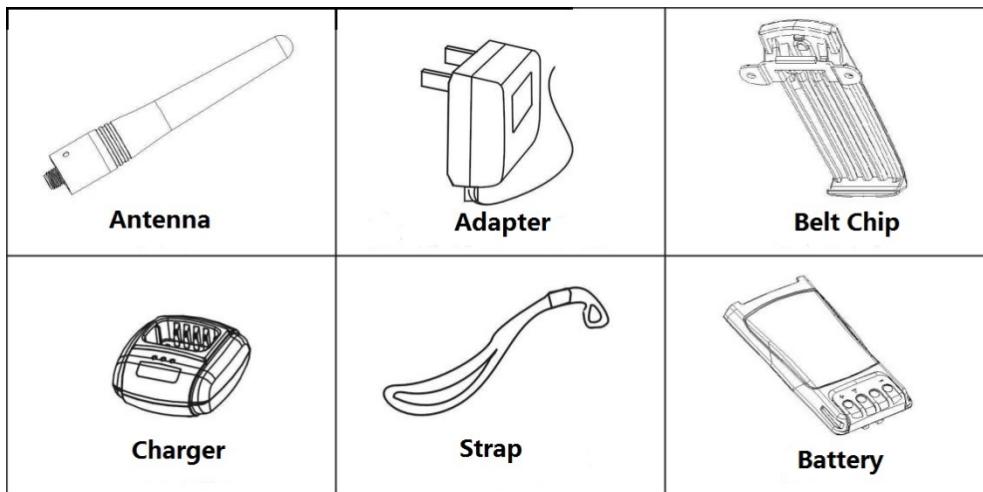

4	No Signal	A. The antenna is in poor contact, please fasten it again. B. Low sensitivity, adjust the parameter in the “test mode” . C. The high-mu tube Q703 is broken, please change it. D. The squelch level is too high to turn it on, please adjust the squelch level. E. Mixer tube Q702 is broken, please change it. F. FM processing chip IC700 is broken, please change to a new IC.
5	No voice on the receiving radio when the indicator glows red on the transmitting radio.	A. The power amplifying tube is broken with no power output, please change it. B. The microphone is broken, please change it. C. The operational amplifier Q601 is broken, please change it.
6	No voice received when the indicator glows green.	A. The speaker is broken, please change it. B. The audio power amplifier U800 is broken, please change to a new IC. C. The switch diode Q801 is broken, please change it.
7	Abnormal Programming	A. Improper connection, please check the cable connection. B. The computer serial port output is abnormal, please check the computer. C. The earphone jack is in poor contact, please check it and change it if broken.

## Appendix 1 Abbreviation

AMP	Amplify, Amplifier
ANT	Antenna
APC	Automatic Power Control
BPF	Band Pass Filter
CTCSS	Continuous Tone Control Squelch System
DCS	Digital Code Squelch
DEMOD	Demodulation
E2PROM	Electrically Erasable Programmable Read-Only Memory
HPF	High Pass Filter
IDC	Instantaneous Deviation Control
IF	Intermediate Frequency
LED	Light-Emitting Diode
LNA	Low Noise Amplifier
LPF	Low Pass Filter
MCU	Micro Control Unit
MIC	Microphone
MOD	Modulation
MONI	Monitor
PLL	Phase-Lock Loop
PTT	Push-To-Talk
RX	Receiver
SPK	Speaker
TCXO	Temperature Control Oscillator
TX	Transmitter
UL	Un-Lock
VCO	Voltage Control Oscillator

## Appendix 2 Accessory List

Accessory	Quantity
Antenna	1
Adapter	1
Belt Clip	1
Intelligent Charger	1
Strap	1
Battery	1
User Guide	1

## Appendix 3

### List 1 Spare Part List (Electronic Section 400-470MHz)

Part Number	Item Name	Specification	Quantity	Plug-in Unit Postion
	FP560-02	400-470MHz,4W, charger KBC-51	0	
6SS3-4109-AA	FP560-02 main unit	400-470MHz, 6.25K,pb-free	1	
6SS1-4083-HMC	FP520-02 main unit SMD (change vocoder)	FP520-02,,pb-free	1	
0SS1-4083-HMC	FP520-02 main unit SMD (change vocoder)	FP520-02, pb-free	1	
1DS1-HSC277	SMD switch diode tube	HSC277,1608	3	D402 D602 D700

1DS1-HVC131	SMD switch diode tube	HVC131(P1),1608	2	D600 D601
1DS1-DA2S10100L	SMD switch diode tube	DA2S10100L	3	D309 D310 D709
1DS1-RB706F-40	SMD switch diode tube	Schottky diode RB706F-40,SOT-323	1	D701
1DV1-1SV278	SMD varactor diode tube	1SV278(T1)	1	D304
1DV1-HVC376B	SMD varactor diode tube	HVC376B(B9)	13	D300 D301 D302 D303 D305 D306 D307 D308 D704 D705 D706 D707 D708
1DZ1-HZU5ALL	SMD regulated voltage diode tube	HZU5ALL,2012,5V	1	D604
1IL1-NJM2904V	SMD linear IC	Dual operational amplification NJM2904V,TSSOP-8	1	IC600
1IM1-AT24C512C	SMD memerizor IC	AT24C512C, ,pb-free	1	IC200
1IS1-MB15E03SL	SMD PLL IC	MB15E03SL,TSSOP-16	1	IC300
1IS1-PST9124NR	SMD reset IC	Reset IC,PST9124NR	1	IC202
1IS1-SCT3252PS	Digital baseband processor chip; forFP520 FP560	SCT3252PS, LQFP100, ,pb-free	1	U1
1IS1-SCT3252PN	Baseband chip	SCT3252PN	1	
1IM1-ST24	Vocoder, 6.25K series	vocoder/ST24, 6.25K series	1	
1IS1-GT3136	SMD specialized IC	GT3136,SSOP16	1	IC700
1IS1-TDA2822	SMD specialized IC	TDA2822	1	U800
1IS1-WM8758B	CODEC chip, for FP520 FP560	WM8758CB, 32-Pin QPN,5*5*0.9MM, ,	1	U6

		pb-free		
1IS1-XC6204B502 MR	SMD regulated voltage IC	Regulated voltage integrated 5V,SOT-23-5	1	IC100
1TF1-2SK1824	SMD FET	2SK1824(B1)	3	Q606 Q6 Q704
1TF1-2SK508NV- K52	SMD FET		2	Q302 Q307
1TF1-3SK318	SMD dual grid FET.	3SK318(YB-)	2	Q702 Q703
1TF1-RD01MUS2	SMD FET		1	Q601
1TF1-RD07MUS2 B	SMD FET	RD07MUS2B, ,p b-free	1	Q600
1TF1-ST2302	SMD FET	ST2302,SOT-23	2	Q802 Q803
1TT1-2SA1586	SMD triode	2SA1586	1	Q805
1TT1-2SC3356-R 24	SMD triode	2SC3356-R24,SO T23,NPN	1	Q603

### List 3 Material List (Structure Material)

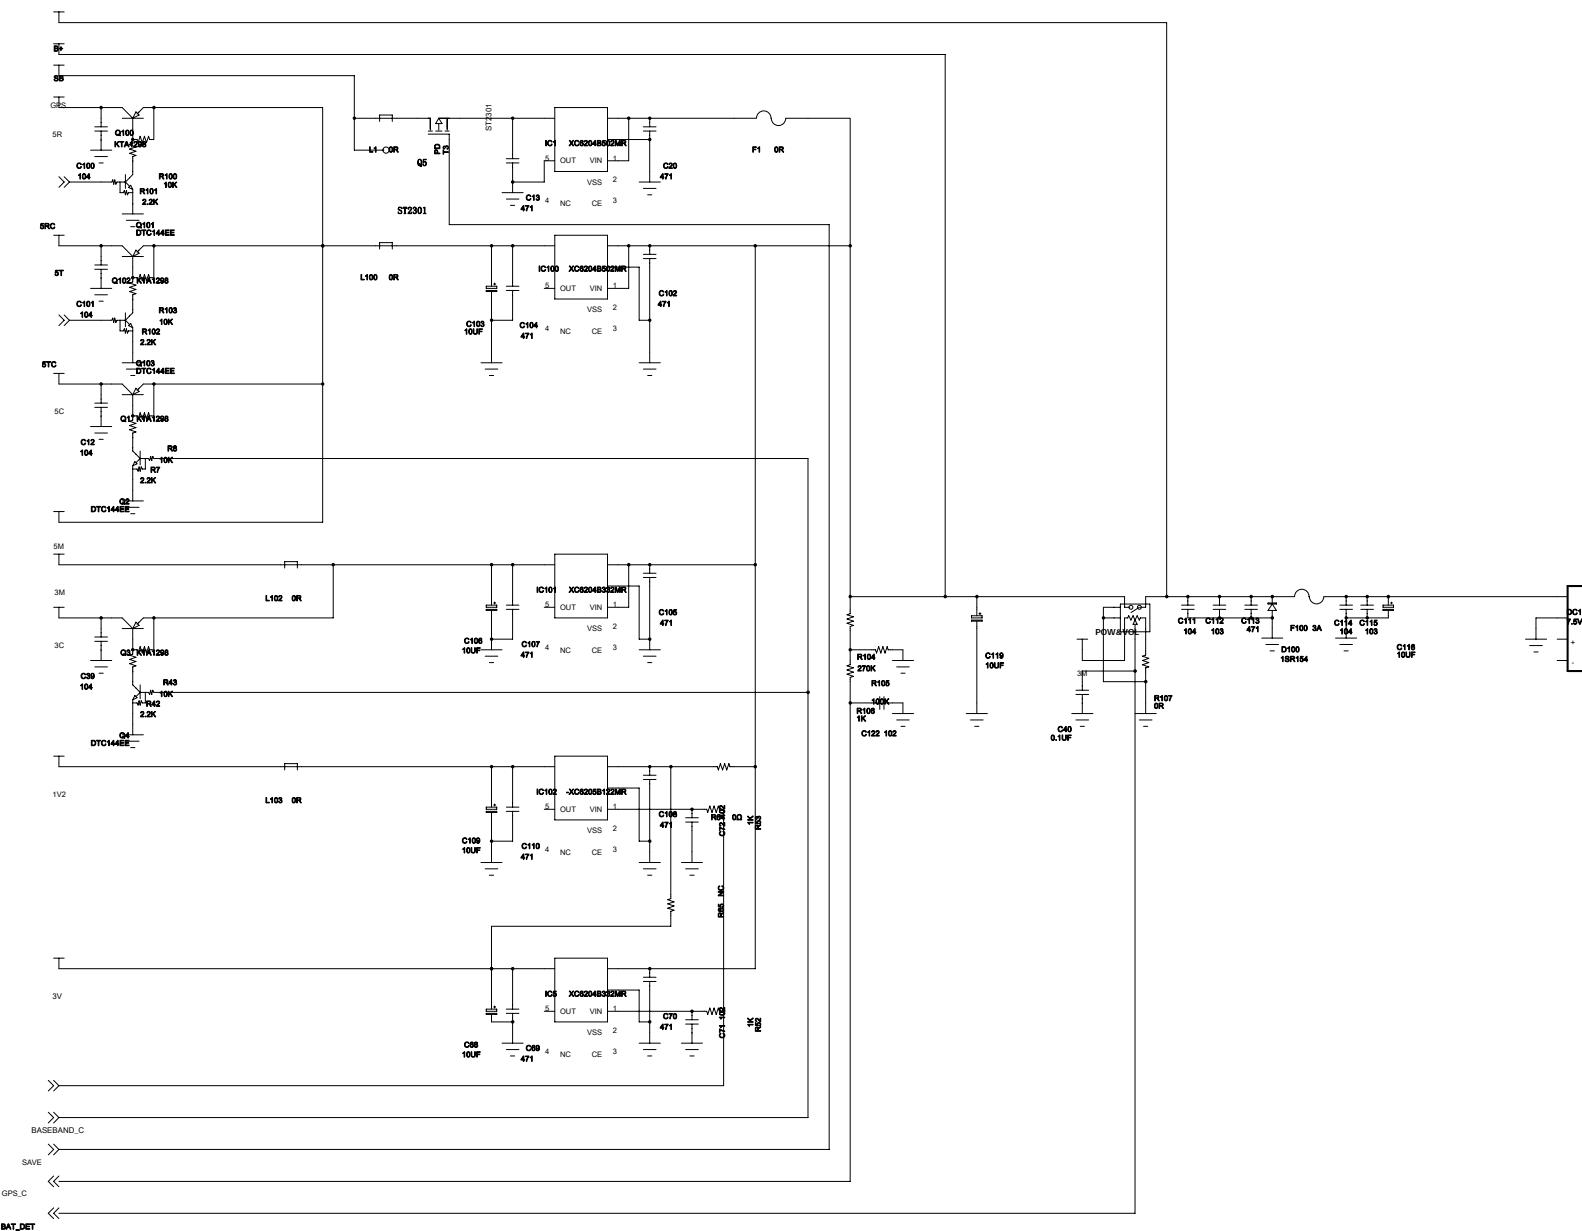

Part Number	Item Name	Specification	Unit	Quantity
7MHP-7208-01B-W0	FP560 volume knob	ABS, black, white paint; pb-free	PCS	1
7MHP-7208-02A-W0	FP560 channel knob	ABS, black,white paint,pb-free	PCS	1
7MHP-4091-02A-W0	FP560 top cover(cover die 1)	PC365; black; pb-free	PCS	1

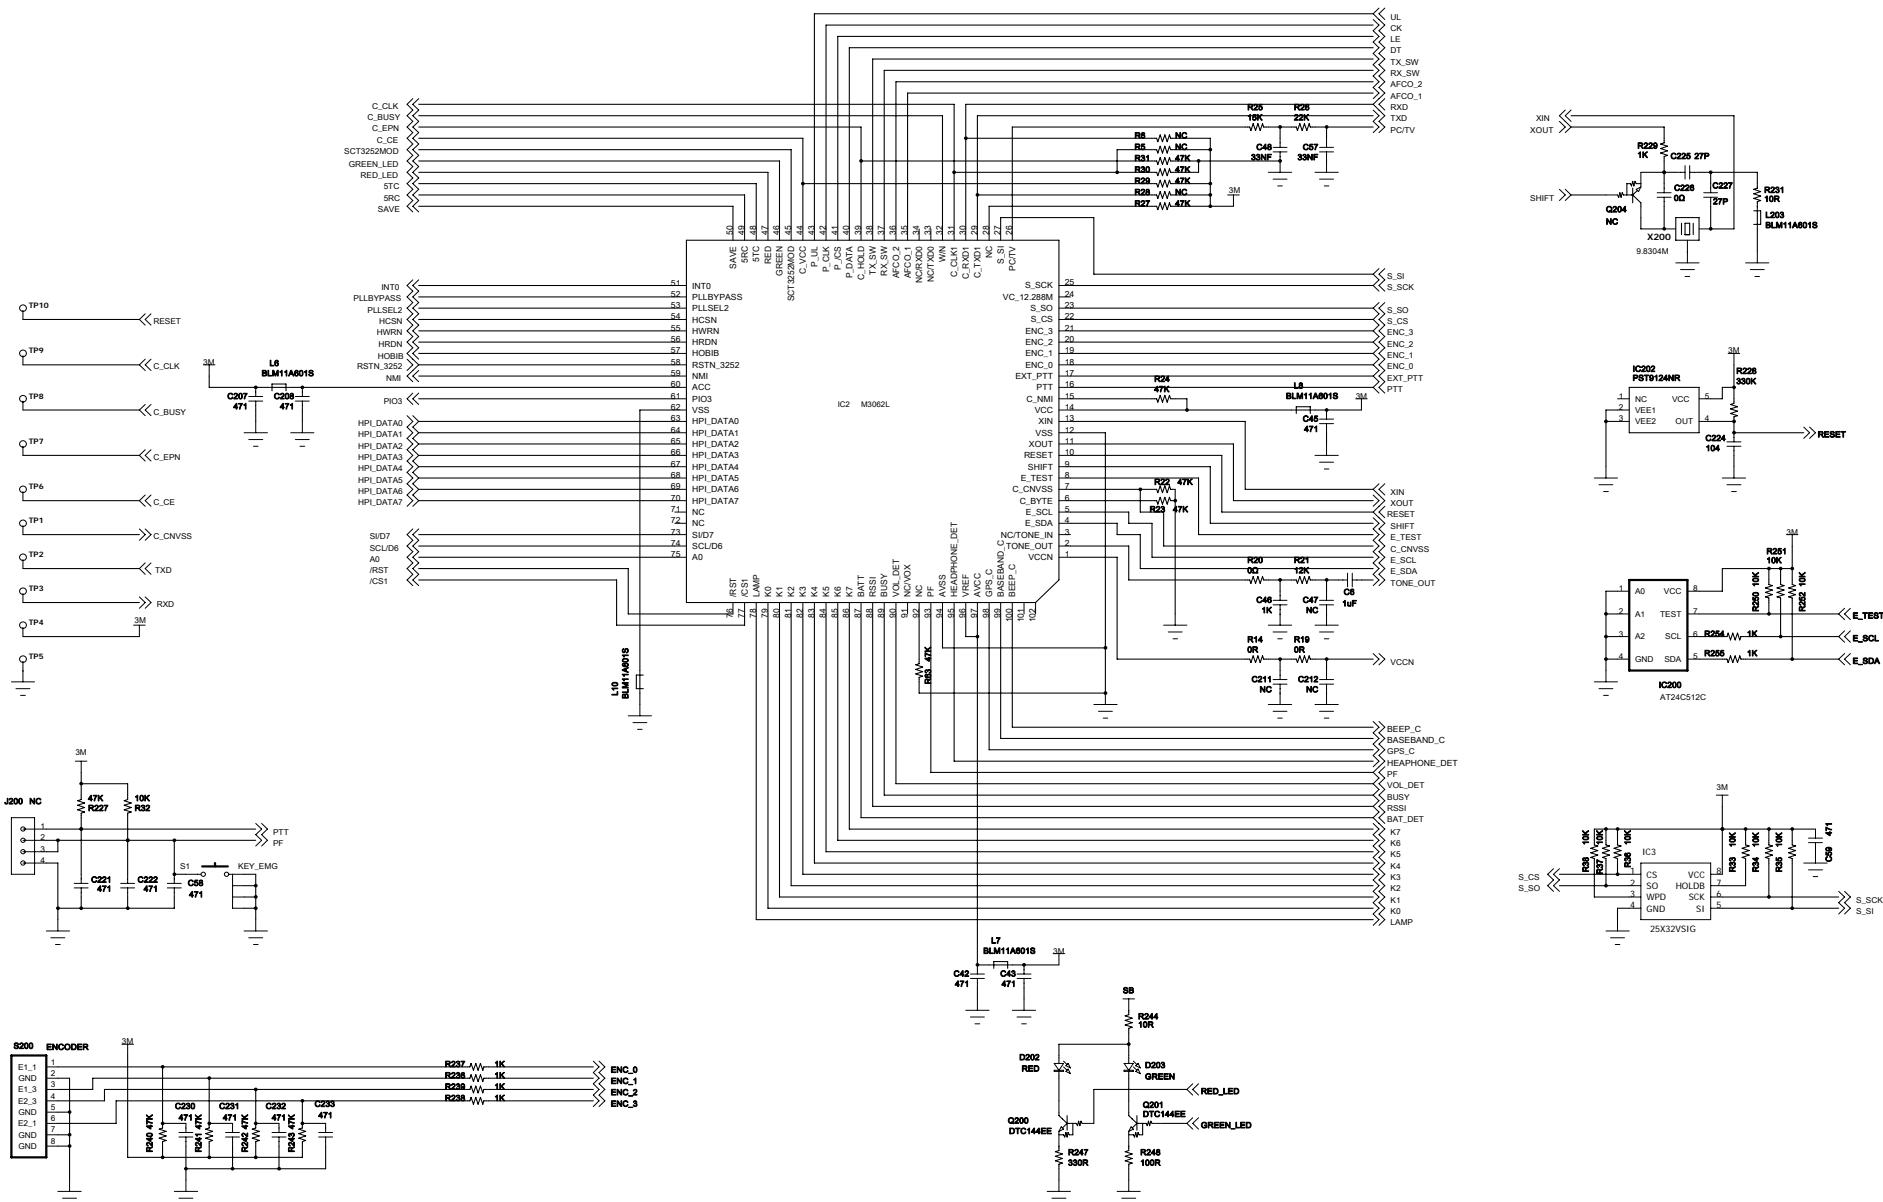

7MHR-7208-01A-W0	FP560 major waterproof ring	Silicone gel; black; polished; pb-free	PCS	1
7MHP-4083-02A-W0	FP560 earphone socket waterproof plug	TPU; black; pb-free	PCS	1
7MHR-7208-02A-W0	FP560 top channel waterproof ring	Silicone gel; black; pb-free	PCS	1
7MHR-7042-06B-W0	thermally conductive silicone gel pad	Silicone gel, black, 3*6*9mm. pb-free	PCS	1
7MHL-4083-01A-W	FP560 aluminum alloy shell	ADC12 aluminum alloy, pb-free	PCS	1
3CR7-SMA-50JFB-4	RF coaxial connector	SMA-J, flange plate installation(558, hole distance 14mm, chip length 10.5mm)	PCS	1
7NRC-090136039-B1A	Antenna nut	brass, internal diameter M9mm, external diameter φ13.6mm, thickness 3.9mm, black passivation	PCS	1
7SMF-020040M-SZYB-N	M2*4 cross round flat head machine screw	Hardened iron,Φ2*4mm	PCS	11
7SMF-020037M-SZCT-N	M2.0*3.7 cross sunken machine screw	1018 Hardened iron,Φ2.0*3.7mm	PCS	2
7SMF-020080M-MHHT-N1	M2*8 torx thick headed machine screw	Hardened iron,Φ2*8mm	PCS	2
7NRC-060100035-B1A	Antenna nut	brass, internal diameter M6mm, external diameter φ10mm, thickness 3.5mm, black passivation	PCS	2
7MHS-1140-01A-W	knob circlip	Spring steel	PCS	2
7MHR-4083-01A-W0	FP560 pedestal waterproof pad	Silicone gel, black, hardness 60 degrees, pb-free	PCS	1
7STF-019047B-SZHT-X	M1.9*4.7 cross thick headed self-tapping screw	Hardened iron,Φ1.9mm*4.7mm	PCS	3
7SMF-016030M-SZYB-N2	M1.6*3 cross round flat head machine screw	Hardened iron,Φ1.6mm*3mm	PCS	2
7MHS-4091-01A-W	FP560 LCD hardware bracket	Imported SUS304, 48H salt frog, pb-free	PCS	1
7MHR-4091-01A-W0	FP560 digital keypad	Combo keypad, silicone gel+ key aluminum+plastic frame, silk print, pb-free	PCS	1
7MHS-4091-02A-W	Digital key metal dome	SUS301, Φ5mm Metal Dome, pb-free	PCS	1

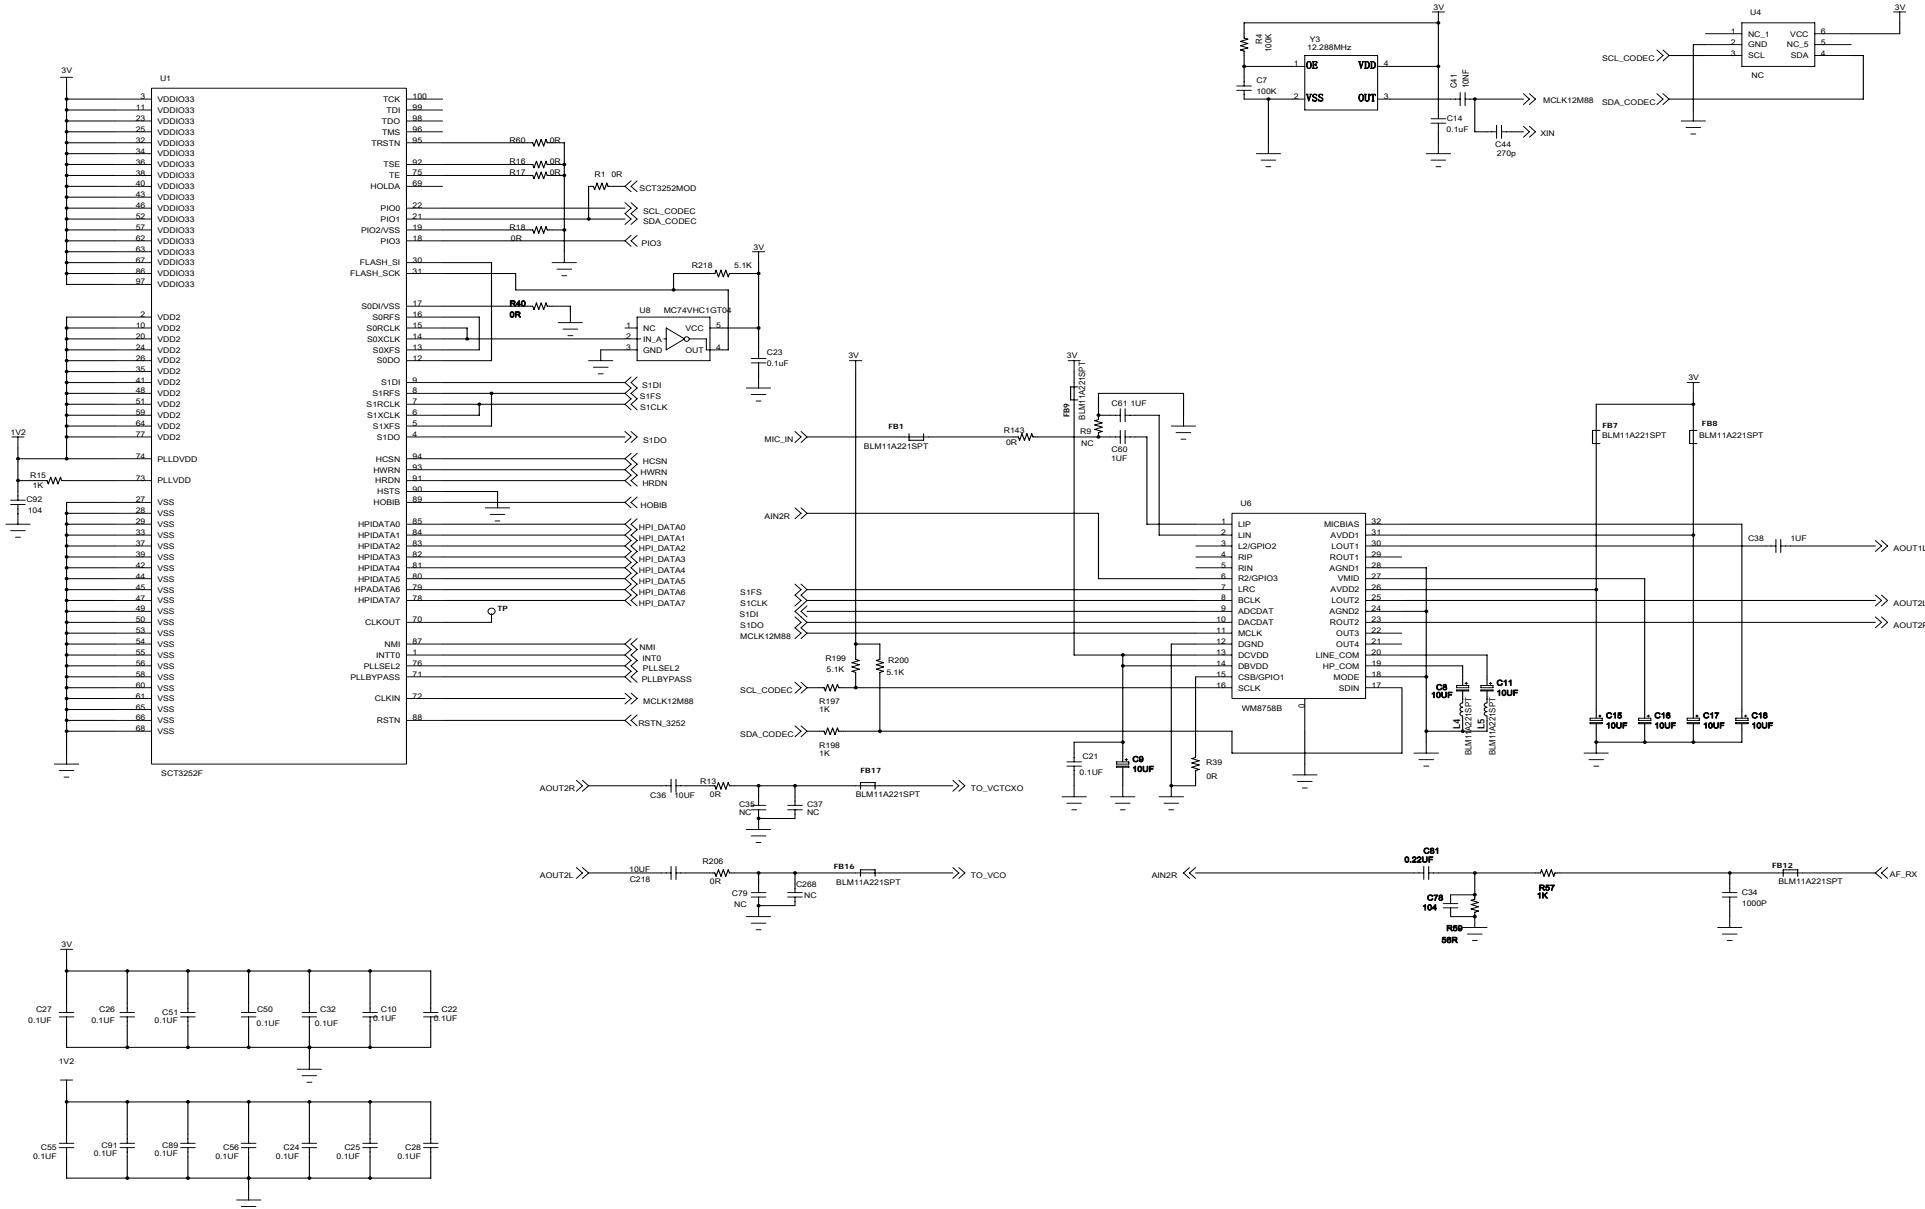

6MD7-F04932	FP560 LCD module	Balck& white screen , 128*64 , pb-free	PCS	1
4SS7-3605-016-100 A	FP560 36mm speaker	ND036GM13924,16Ω,1W,Φ36*H 5.0, pb-free	PCS	1
7GCB-320001-W0A	Speaker waterproof net	Φ32 speaker waterproof net,diameter Φ32mm*thickness 0.1mm	PCS	1
7MBP-4091-01A-W0	FP560 front shell	PC365; black; silk print; pb-free	PCS	1
7MHP-4091-01A-W C	FP560 guide beam	Silicone gel , 65 degrees , transparent white, pb-free	PCS	1
7MHR-7208-05A-W3	FP560emergency key	Silicone gel;orange; pb-free	PCS	1
7MHR-7208-06A-W0	FP560 side silicone gel key	Silicone gel;black; pb-free	PCS	1
7MHP-7042-14B-W0	FP560 battery latch	POM,black, pb-free	PCS	1
7MHS-7042-01A-W	FP560 latch spring tablet 1	Stainless steel(SUS301),0.25THK, pb-free	PCS	1
7MHS-7042-01B-W	FP560latch spring tablet 2	Stainless steel (SUS301),0.25THK, pb-free	PCS	1
7MHX-7042-02A-Z	FP560 battery hook 1	Zinc alloy(Zn3#), black zinc plated, pb-free	PCS	1
7MHX-7042-02B-Z	FP560 battery hook 2	Zinc alloy (Zn3#), black zinc plated, pb-free	PCS	1
7MHP-4091-01A-W0	PTT plastic key (cover die 1)	PC365; black;pb-free	PCS	1
7MHP-7208-06A-W0	FP560 earphoen cover plug	ABS; black; pb-free	PCS	1
7MHP-7208-07A-W0	FP560 earphone cover board	TPU; black; pb-free	PCS	1
7MHJ-4091-01A-W	FP560 key board double-sided adhesive tape	3M9448, pb-free	PCS	1
7MHR-1727-09A-W3	FP560 microphone cover	Silicone gel, hardness 40, orange, no surface processing	PCS	1
4SM7-6027-A40C	MIC	Φ6.0,height 2.7,-40±2dB,all direction,2.2KΩ,2V, with 80mm red black wire	PCS	1
7GCB-070001	Φ7 mic waterproof cloth	Waterproof cloth, diameter Φ7mm, thickness 0.1mm	PCS	1
7GCM-411294-J	FP560 LCD sponge pad	PRON, 41.1*29.4mm, pb-free	PCS	1
7SMF-026060M-SZ HT-B1	M2.6*6 cross machine screw	Hardened iron, M2.5*6.0	PCS	2
7MHZ-1731-01A-J5	speaker insulated paper	18* 8mm, thickness 0.2mm	PCS	1
7MHS-4083-01A-W	FP560 PTT key metal	Φ6mm,SUS301 square metal	PCS	1

	dome	dome; pb-free		
3WF7-05030-500C4	Flexible connecting wire	Interval 0.5mm,30P, wire length 50mm	PCS	1
6SS3-BJ4026-A	belt clip	DP770 belt clip,PC+ABS, black, pb-free	pcs	1
7MJP-4026-01A-W0	belt clip	DP770 belt clip, PC+ABS, black, pb-free	PCS	1
7MJS-7013-01B-N	belt clip bracket	Stainless steel(SUS304),1.00THK, nickel plated,pb-free	PCS	1
7MJS-7013-02A-W	belt clip torsional spring	φ1.00 Stainless steel, pb-free	PCS	1
7MJS-7013-03A-N	belt clip rotating shaft	1018,φ2x24.4,nickel plated, pb-free	PCS	1
