NI GPIB vintage driver for Windows98SE

« on: May 08, 2020, 05:23:10 pm »

Say Thanks Reply Quote

Hi,
NI has removed all the vintage driver from the their homepage. I can't find any link for downloading Windows 98SE drivers for NI GPIB ISA cards in the net. Any hints where I can find this driver package? Thanks...

Thanks...

Guessing I would have it archived. What is the cards part number and I will check to see.

Thank you Joe. Meanwhile a forum member helped me to get the driver package.

And I learned my lesson (again): Save every Software you have downloaded in your own archive, even when the company offered all their released software on their site since decades without any restrictions. Never trust that this will last for ever!

I've not checked but they used to have an FTP site. You may find some of these old versions there if it's still active.

Glad you were able to sort it out.

I am also looking for a driver for a NI PCI GPIB card for windows XP service Pack 3 and/or windows 7. The card assembly number is 182820C-01. Any help is much appreciated. Thank you.

Are you able to post that driver here, or a link to it? I may even be trying to use my N.I. 8-bit ISA Slot GPIB card under DOS to transfer scripts to scopes and so forth.

I was the one who sent a link to Chronos 42

<ftp://ftp.ni.com/support/gpib/>

NI in the past disabled some web sites / ftp because of too much traffic / buzz around it, to @ all download what you need and archive them or host them somewhere safe like ko4bb ...

while it last ?

What software would you recommend to use with an HP E2050A, which is supposed to be a VXI-11 gateway?

python-vxi11.

You can also use pyvisa and pyvisa-py (the latter is an all-python driver, in the sense that NI-VISA or Agilent VISA would be a driver, for pyvisa).

I know the person running that part of the business - a dangerous waste of space. NI is a company in trouble and will probably be a target at some point in the next few years. Essentially they have a complex test platform that fewer and fewer people see the need to a) pay for and b) waste their time constantly paying for people to fix it.

Labview will be interesting. Its a valuable asset. What happens to it eventually will be interesting to see.

I am also looking for a driver for a NI PCI GPIB card for windows XP service Pack 3 and/or windows 7. The card assembly number is 182820C-01. Any help is much appreciated. Thank you.

PCII/IIA and Win XP/7 driver... forgone it. I have trouble with this card an Win98se & IEEE488.2 1.7. Of coruse, PCII/IIA is cloned by many company (upD7210 based card) and NI didn't feel like support this card. Only very old NI488.2 support him.

url removed, 48h is over

Both link have only 48h lifetime. Please, save it. I got 2.3 from a people. Version 2.2 was downloaded by NI, before NI has banned it.

Greetings

matt

No drivers = best drivers.

Yeah learned that the hard way.

I scored a cheep NI GPIB to ethernet converter box and later on figured out that its essentially impossible to make it work on a modern system. The Base10 ethernet port did work with my network but the way it gets an IP is weird and didn't work and the only drivers i could find for it turned out to be for win 98. So its a paperweight now.

Later on went and got a more modern Agilent GPIB to Ethernet converter box. That thing got its IP from DHCP and had its configuration in a webpage it hosts. I never want to sell that thing, especially with how rare they are for a reasonable price.

Thats why sometime we have to keep old pc's with win 95 / win 98

For me i had to build Dos+win95, Dos+win98 and Xp virtuals machines worked 95% most of the times ... now the problems is finding theses pesky drivers we need for the "old stuff"

Dumped recently an 486 dx2 pc, just served until the end of 2019 😊 managed to get a more recent software at a mere 12K \$\$\$ upgrade lol

Hello,
sorry for reviving this old topic,
but I have a ISA PCII/IIA GPIB interface from National Instruments as well...
From what I understand Windows ME is the latest os that can be used, is this correct?
Can you please send the drivers to me, too?

I would appreciate it very much.
Thank you very much in advance

According to the NI-488.2 Version 1.70 ReadMe.txt, it only supports the GPIB-PCIIA on Windows Me/98/95

Code: [Select]

```
National Instruments NI-488.2 for windows.
Version 1.70.
Copyright 2000 National Instruments Corporation.
All Rights Reserved.
```

NI-488.2 for windows, Version 1.70, supports the following hardware:

| | windows Me/98/95 | windows NT | windows 2000 |
|-------------------|------------------|------------|--------------|
| | ===== | ===== | ===== |
| AT-GPIB/TNT | Yes | Yes | Yes |
| AT-GPIB/TNT (PnP) | Yes | Yes | Yes |
| AT-GPIB/TNT+ | Yes | Yes | Yes |
| GPIB-1394 | win98 and winMe | No | No |
| GPIB-ENET | Yes | No | No |
| GPIB-ENET/100 | Yes | No | No |
| GPIB-PCII | Yes | No | No |

You can download an ISO image of the NI-488.2 Version 1.70 installation CD here:

<https://archive.org/details/ni-488.2-1.7.0>
https://archive.org/download/ni-488.2-1.7.0/NI-488.2_1.7.0.iso

Thank you very much.
I found that one, and 2.2 as well (from NI ftp), but it seems it doesn't support ISA boards.
From what I understand from the documentation at <ftp://ftp.ni.com/support/gpib/ni488220/>, version

2.0 is the last one supporting ISA boards, am I right?
Does anyone have the ISO?
Thank you again.

If you really need to use an ISA bus GPIB controller, according to the NI-488.2 for Windows Version 15.0 Readme, it supports the ISA bus AT-GPIB/TNT (PnP) on Windows XP SP3.

I don't know if any newer versions of NI-488.2 still support the ISA bus AT-GPIB/TNT (PnP).

NI 488.2 GPIB Driver 15.0 for Windows

<https://archive.org/details/ni-488.2-15.0>

https://archive.org/download/ni-488.2-15.0/NI-488.2_15.0.iso

The readme for NI-488.2 for Windows, Version 2.0 doesn't list support for any ISA bus GPIB controllers.

The readme for NI-488.2 for Windows, Version 2.2 says that the support for the ISA bus AT-GPIB/TNT(PnP) is new in that version.

For anyone looking for a specific old version of NI 488.2 software, someone was helpful enough to upload almost a complete set of old CD ISO images just last month. The only old version that I don't see there currently is version 2.0

(I hope that NI doesn't eventually request that these images be removed. I have no idea how often that might happen with images uploaded to archive.org)

The readme for NI-488.2 for Windows, Version 2.0 doesn't list support for any ISA bus GPIB controllers.

The readme for NI-488.2 for Windows, Version 2.2 says that the support for the ISA bus AT-GPIB/TNT(PnP) is new in that version.

The documentation of the Version 2.0, the only one missing from the Internet Archive, that can be found here:

<ftp://ftp.ni.com/support/gpib/ni488220/Documentation.zip>

in the "GPIB Hardware Guide.pdf" file lists the GPIB-PCII/IIA card as supported, exactly the ISA bus card that we have, that's why I think this is the last version for me. Anyway, I can use version 1.7 if version 2.0 cannot be found.

This post has a copy of the Readme file for NI-488.2 for Windows, Version 2.0:

<https://www.eevblog.com/forum/testgear/setup-help-with-ni-gpib-usb-a-and-b-on-windows-7/msg4087360/#msg4087360>

It has no mention of any ISA bus GPIB controller as a supported interface. That information might be more accurate than the "GPIB Hardware Guide.pdf", which might include information on interfaces that are no longer supported.

Code: [Select]

Supported Interfaces

NI-488.2 for windows, Version 2.0, supports the following hardware on windows 2000/XP/Me/98. Any special requirements or conditions are stated below the list in the Notes section.

GPIB-ENET
 GPIB-ENET/100
 GPIB-USB-A
 GPIB-USB-B
 PCI-GPIB
 PCI-8212
 PMC-GPIB
 PXI-GPIB
 PXI-8212

In any case, in a week or so I should have access to a CD of NI-488.2 for Windows, Version 2.0. I will upload an ISO image of that CD when I am able to do so, and then an almost complete set of CD images for old versions of NI-488.2 for Windows should be available.

I'm looking at the files in

<ftp://ftp.ni.com/support/gpib/archive/>

and it seems to me that 377119.zip is the version 2.0 that I was looking for...

Anyway, a full cd is still missing, I'll look forward for your ISO, thanks again!

Try going here <http://download.ni.com/support/gpib/> and look around in the "ni488x" folders, you may find what you need there.
