SPECIFICATIONS

| | |
|--|------------|
| 1. Main specifications | M 1 |
| 2. AE coupling operation range | M 2 |
| 3. Shutter program graph | M 2 |
| 4. Manual test function | M 3 ~ M 5 |
| 5. Zoom position | M 6 |
| 6. AF distance measurement position and photographing distance | M 7 ~ M 14 |

1. Main specifications

| | |
|---|--|
| Type | Camera for 35mm film |
| Photographing lens | |
| Lens focal distance | f38~120mm/F5.3~10.5 |
| Lens configuration | 3 groups zoom type and 5 groups with 7 lenses (G1: ED lens, G5, G6: PGM) |
| Zoom system | Electric step zoom system and 6 steps |
| Lens photographing distance | W: 0.75m~∞ T: 0.8m~∞ |
| Finder | |
| Type | Real image zoom finder |
| Magnification | W: 0.44 times~T: 1.13 times |
| Diopter | -1.5 ~ +1.5 dpt (at infinity) |
| Eyepiece | Blur-resistant eyepiece |
| Automatic focus | |
| System | Passive system |
| Base length | 5.566mm |
| Number of AF (Auto focus) step | W: 111 edges T: 273 edges |
| Exposure control | |
| Shutter type | Electromagnetic drive program electronic shutter (This is also used as aperture.) |
| Shutter time | 2~1/360 sec |
| AE (Auto exposure) coupling operation range | W: EV4~17 T: EV6.125~19.125(ISO100) |
| FM coupling operation range | W: F5.77~F22.63 T: F12~F47.26 |
| Speed light | |
| Type | Pop-up built-in type |
| Mode | AUTO, flash prohibition, forced flash and slow synchronization |
| Guide number | 14 (ISO100) |
| Charging time | Approx. 6 seconds |

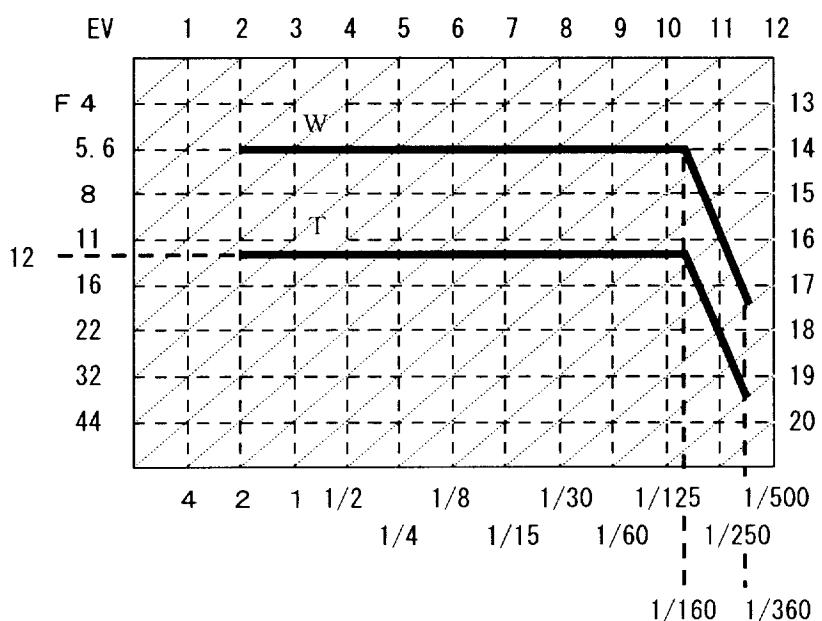

2. AE coupling operation range

| Zoom zone | Limit value |
|-----------|-------------|
| W | EV 4 |
| | 2 EV 4.875 |
| | 3 EV 5.25 |
| | 4 EV 5.75 |
| | 5 EV 5.875 |
| T | EV 6.125 |

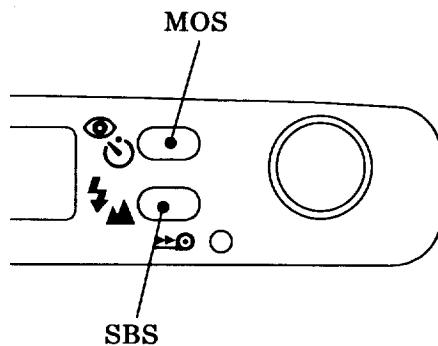

| Zoom zone | Limit value |
|-----------|-------------|
| W | EV 17 |
| | 2 EV 17.875 |
| | 3 EV 18.25 |
| | 4 EV 18.75 |
| | 5 EV 18.875 |
| T | EV 19.125 |

3. Shutter program graph

4 . Manual test function

S 1 : Pre-release
 M S W : Power switch
 M O S : Mode switch
 S B S : Speed light mode switch
 P A R : Panorama switch
 Z U S : Zoom up switch
 Z D S : Zoom down switch

(1) Operation procedure

1) Operation to set the manual test mode

- ①The camera condition should be as follows: MSW is ON and the lens barrel is positioned between W end and T end.
- ②Turn on MOS and turn on SBS within 1 second as turning on MOS. Wait for 10 seconds as turning on the both switches.
- ③After 10 seconds, the battery mark is lit on LCD to indicate that the system is in the manual test mode.

2) Selection of command

- ①Under the manual test mode condition, operate SBS as turning on MOS. According to the operation, the number corresponding to a command (refer to the test command list) is displayed on the film counter. ("0" is displayed as the initial value.) Each time SBS is turned on, the command number is increased one by one. (After "5", "0" is reset.) When the commands 1~5 are set by operating SBS, other commands are reset. When MOS is turned off, the command number is not displayed.

3) Display of set data

- ①Under the manual test mode condition, operate MOS as turning on SBS. AF data or ISO data is displayed according to the display (when a command is set) on the test command list.

4) Bulb setting and AF setting

- ①When "command 1" is displayed, turn off SBS and MOS. Bulb release is possible.
- ②While "command 0" or "command 1" is displayed, operate MOS as turning on SBS. Each time MOS is operated, the AF data is increased one by one. (After the battery is set, the initial value is "000h". When the AF data is increased to "3FFh", the data returns to "000h".) When the desirable data is selected, turn off SBS and MOS. The data setting is completed.

5) Setting of ISO values for commands 3, 4 and 5

①Turn off MOS as turning on SBS. While "command 3", "command 4" or "command 5" is displayed, operate MOS. Each time MOS is operated, the value is increased one by one. (The ISO value which was read from the DX code is displayed as the initial value. When the value is increased to "ISO3200", it returns to "ISO50".) When the desirable data is selected, turn off SBS and MOS. Data setting is completed.

6) Execution of test

- ①After the desirable command is set in Procedure 2), operate the camera normally.
 ②The camera operates according to the set command. The test can be executed repeatedly.

7) Display of zoom edge number

①In "command 1~5", operate ZSW to drive the lens barrel. After ZSW is turned off, the edge number between the encoder position and stop position is displayed for 1 second. (It is not displayed while the zoom is driving.)

8) Display of panorama

- ①In "command 1~5", turn on ZDS at W end. The PAR set status is displayed.

9) Setting of another command

- ①If another command must be executed subsequently under the manual test mode, return to Procedure 1) and set the manual test mode again. In this case, the timer should be set to "3 seconds" for setting.
 ②When a command is newly set, the previous command is reset. (Two commands cannot be executed at the same time.)

10) Cancel of test mode

- ①Turn off MSW, and the test mode is canceled.
 ②Select "command 0" and exit from the test mode. The test mode is canceled.
 ③Even if the lens barrel is driven at W end with the timer at "2 minutes", the manual test mode is not canceled.
 ④If the camera back is opened while the bulb is opened, the bulb keeps open.
 ⑤Even if the test mode is canceled, the set ISO value keeps valid.

(2) Test command list

①The following test commands are provided. When a command number is selected, a command marked with "○" is valid.

| Command No | | | | | Command | Display | | Deails of check |
|------------|---|---|---|---|----------------------|------------------|----------------|--|
| 1 | 2 | 3 | 4 | 5 | | When set | Result | |
| ○ | | | | | Bulb setting | AF distance data | | The lens barrel moves to the edge corresponding to the set AF distance data and a bulb is set. |
| | ○ | | | | AF setting | AF distance data | | The lens barrel moves to the edge corresponding to the set AF distance data. |
| | | ○ | | | Display of AF result | | Focusing data | Each time S1 is turned on, the focusing edge is displayed. |
| | | | ○ | | EV value reading | | EV data | Whenever the S1 is turned on, the calculated AE result is displayed. |
| | | | | ○ | BV value reading | | BV data | Each time S1 is turned on, the result of SPD metering operation is displayed. The displayed metering operation data is changed with the zoom switch. |
| | | ○ | ○ | ○ | ISO value setting | ISO data | ISO value data | The ISO value read from the DX code is displayed. The ISO value is set and exposure is controlled by the set ISO value. |
| ○ | ○ | ○ | ○ | ○ | Display of zoom | | Zoom position | After the lens barrel is driven with ZSW, the edge number of stop position is displayed for 1 second since ZSW was turned off. |
| ○ | ○ | ○ | ○ | ○ | Display of panorama | | F/P | When ZDS is turned on at W end, PAR is read and the full size mode or panorama mode is displayed. |

(3) Numerical value data

1) AF data

- ①The AF data is displayed with sexadecimal numbers. (000h~3FFh)
- ②"0"~"F" of the lower 2 digits are displayed on the film counter.
- ③"0"~"3" of the highest digit is displayed on the red eye and self-remote control display.

2) EV value

- ①2 digits of the film counter are used. The value is displayed with sexadecimal numbers.

3) Zoom edge

- ①2 digits of the film counter are used. The value is displayed with sexadecimal numbers.

4) ISO set value

① 2 digits of the film counter are used and the set ISO value is displayed as follows.

| The set ISO value | Displayed data |
|-------------------|----------------|
| 5 0 | 0 5 |
| 1 0 0 | 1 0 |
| 2 0 0 | 2 0 |
| 4 0 0 | 4 0 |
| 8 0 0 | 8 0 |
| 1 6 0 0 | 1 6 |
| 3 2 0 0 | 3 2 |

5. Zoom position

| Zone | Focal distance | F N o . |
|------------|----------------|---------|
| R e | — | — |
| 1 (W) | f 3 9. 9 | 5. 7 7 |
| 2 (M 1) | f 5 5. 3 | 7. 5 5 |
| 3 (M 2) | f 6 8. 3 | 8. 8 3 |
| 4 (M 3) | f 8 1. 6 | 9. 9 4 |
| 5 (M 4) | f 9 6. 1 | 1 1. 0 |
| 6 (T) | f 1 1 4. 0 | 1 2. 0 |

6. AF distance measurement position and photographing distance

| Edge | Display | W Distance [m] | M 1 Distance [m] | M 2 Distance [m] | M 3 Distance [m] | M 4 Distance [m] | T Distance [m] |
|------|---------|-------------------|---------------------|---------------------|---------------------|---------------------|-------------------|

DISASSEMBLING/ASSEMBLING/ADJUSTMENT

Note : ① Be sure to take off the battery before disassembly.

② At disassembly, make sure to memorize how to arrange the wires, how to fix the screws, and the types of used screws.

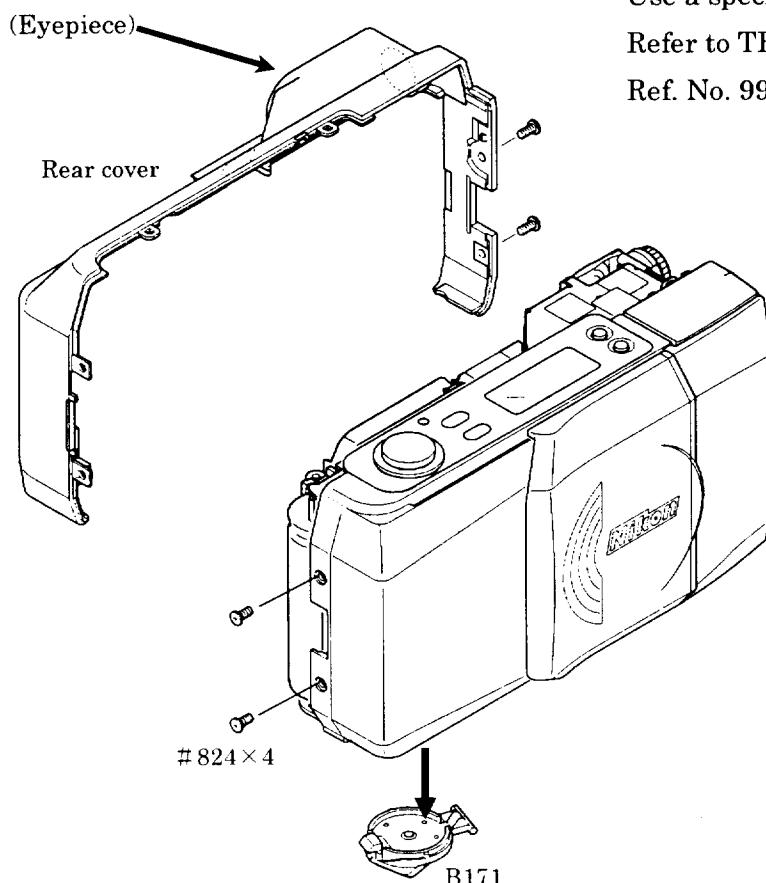

③ Be sure to get yourself grounded because of the static electricity which exerts any serious adverse effect to ICs.

④ Make sure which side is back or forth when taking off the gear.

⑤ Special processing (blur-resistant processing) is applied to the eyepiece unit of this camera. The eyepiece unit is liable to damage. Don't damage it during cleaning.

1. DISASSEMBLING

REAR COVER

Caution : Don't touch the eyepiece unit directly.

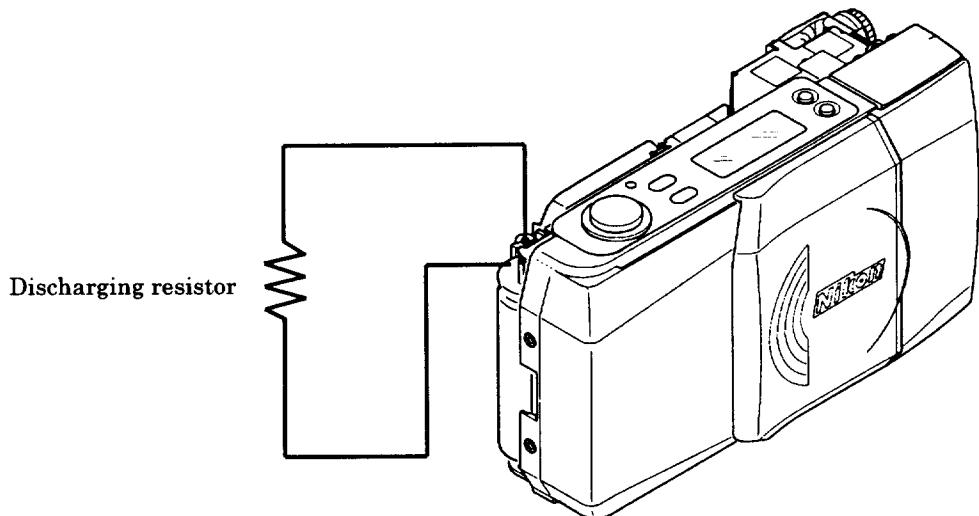

Use a special cloth for cleaning.

Refer to TECHNICAL INFORMATION

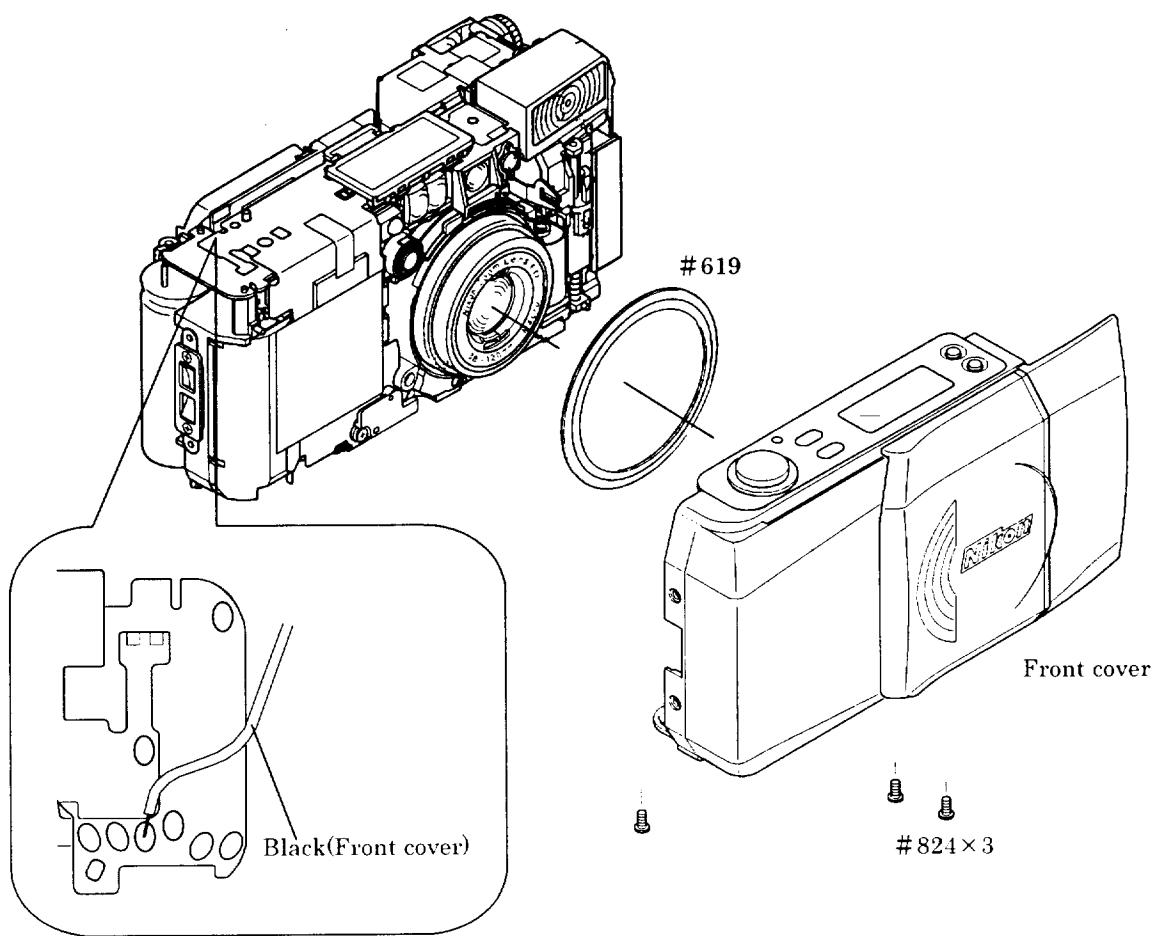

Ref. No. 99086.

ELECTRIC DISCHARGE FROM THE MAIN CAPACITOR

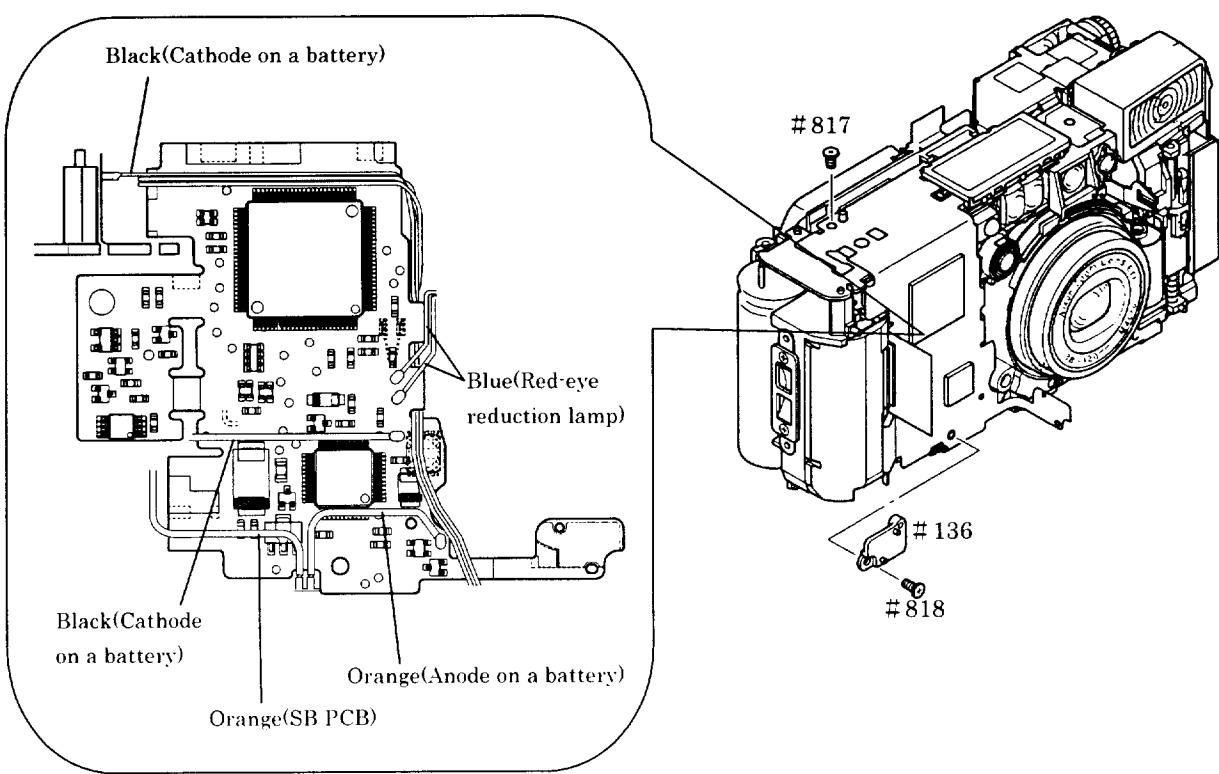

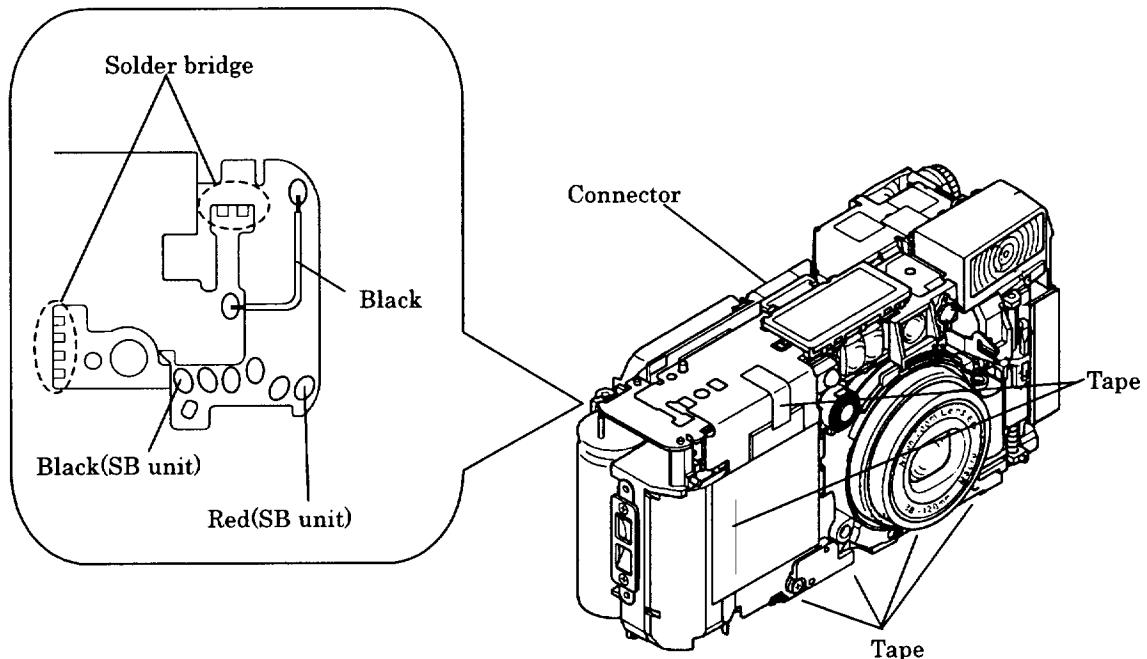

- Discharge the electricity between the both terminals of Xe tubes.
- For the electric discharge, employ the resistor of approximately $2\text{ k}\Omega / 5\text{ W}$.

2. ASSEMBLING/ADJUSTMENT

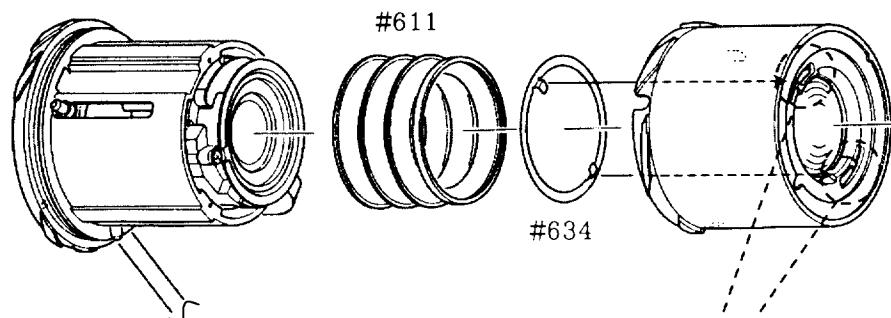

1. LENS BARREL

SHUTTER UNIT, 3rd LENS HOUSING UNIT

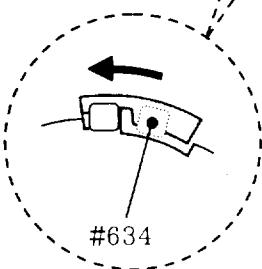

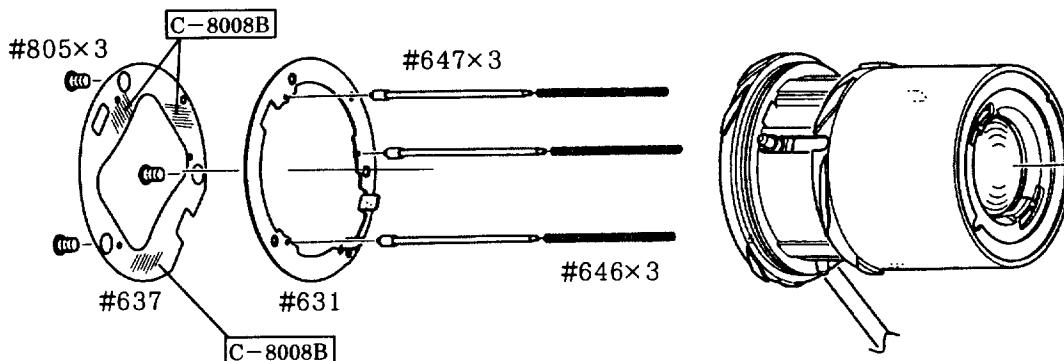

Caution: In B610, the 2nd lens group is already centered while it includes the shutter. Don't disassemble B610 to keep the accuracy. All the parts are set as assembly.

1st LENS GROUP

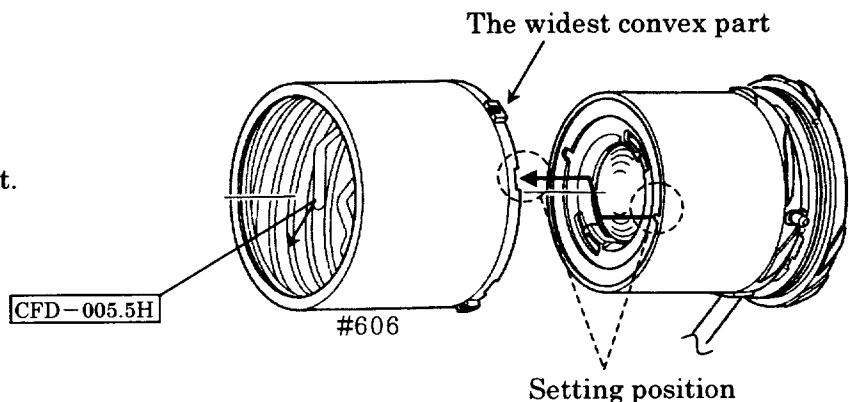

- Move #634 in the arrow mark direction to position it as illustrated in the right.

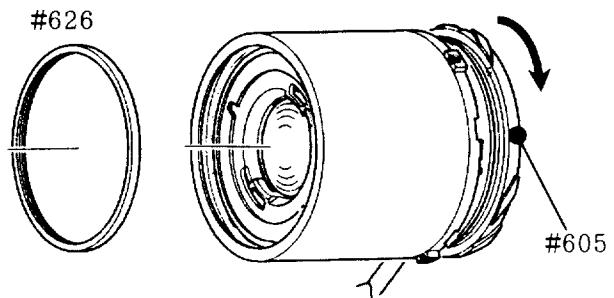

FPC HOLDER PLATE**HELICOID RING, CAM RING**

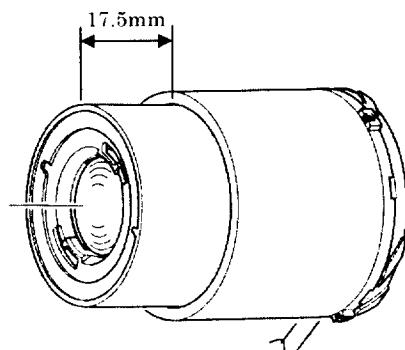

- ① Fit the setting positions
as illustrated in the right.

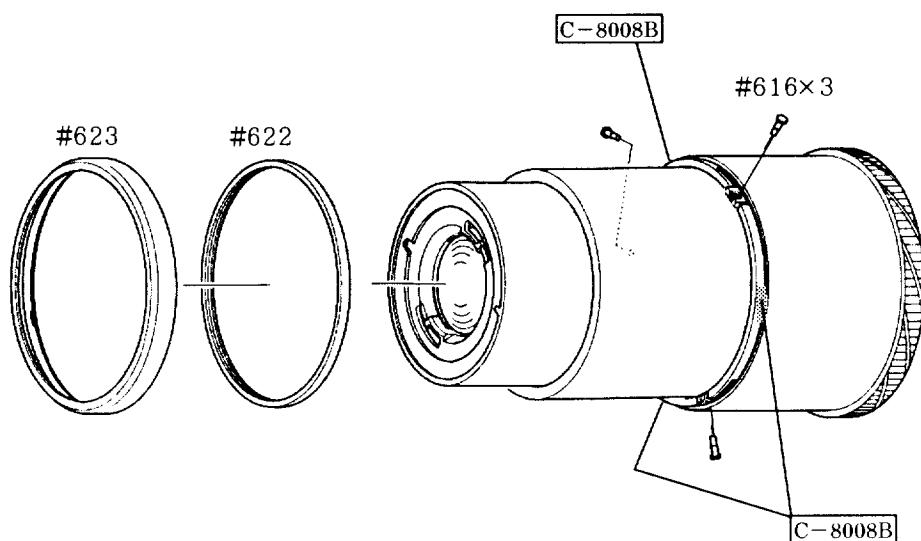

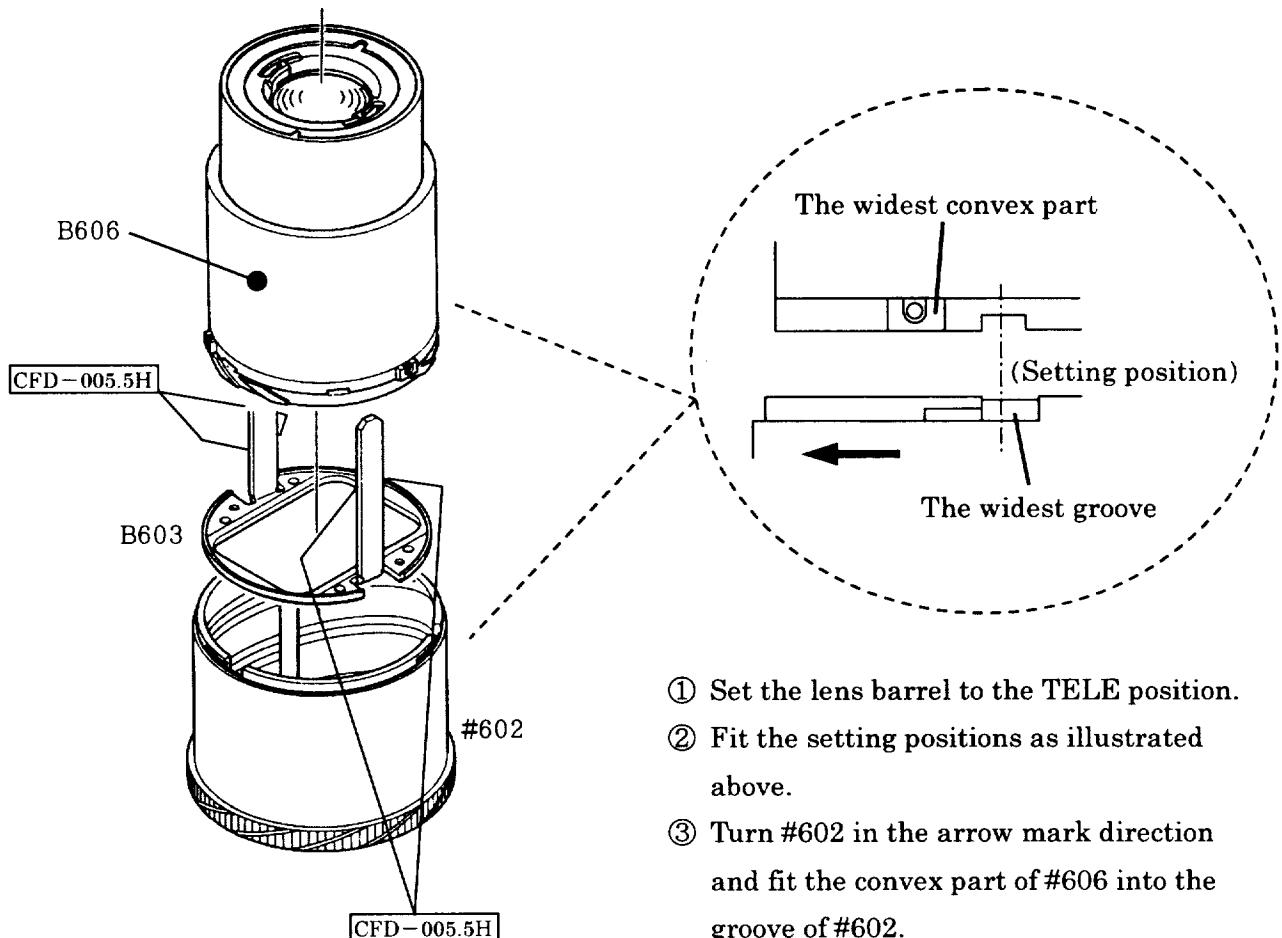

- ② Put in #626 and turn #605 in
the arrow mark direction.

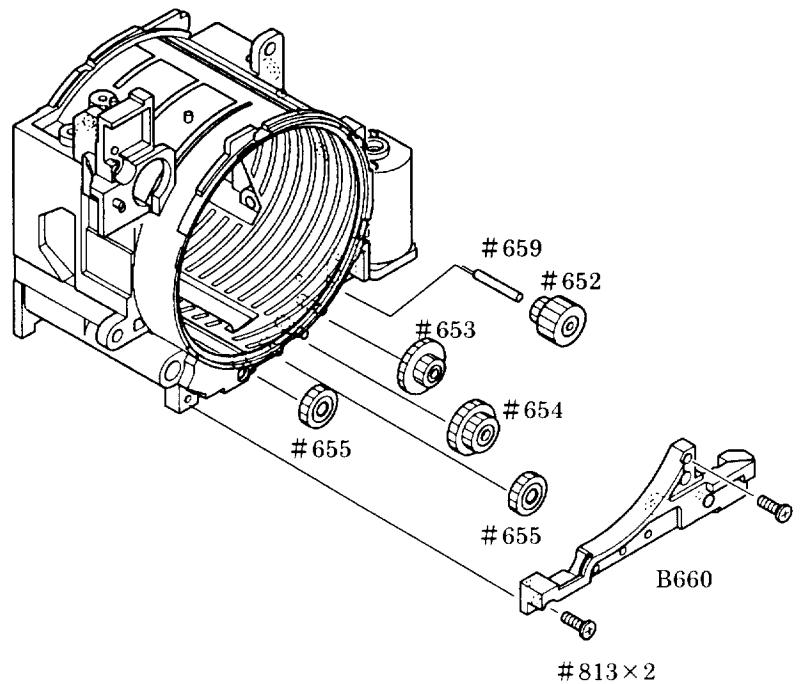

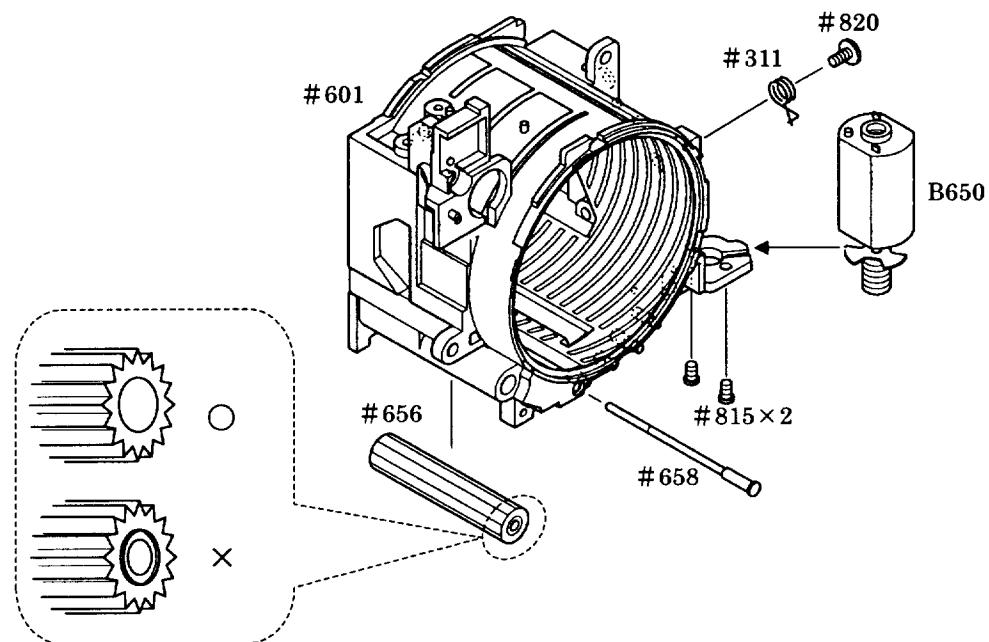

- ③ Turn #605 till it touches the
stopper and make sure that the
1st lens group chamber is protruded
by approx. 17.5mm.

LENS BARREL MOTOR, LENS BARREL GEAR GROUP

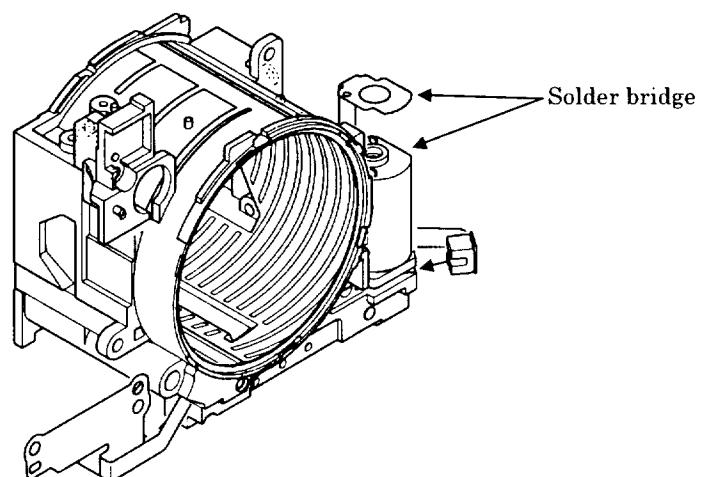

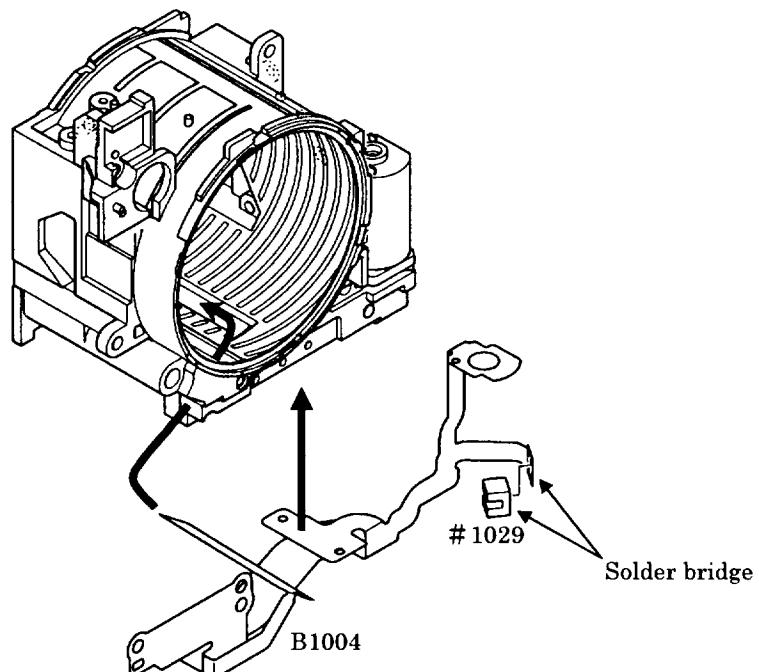

- Apply G474C to gears and gear shafts.

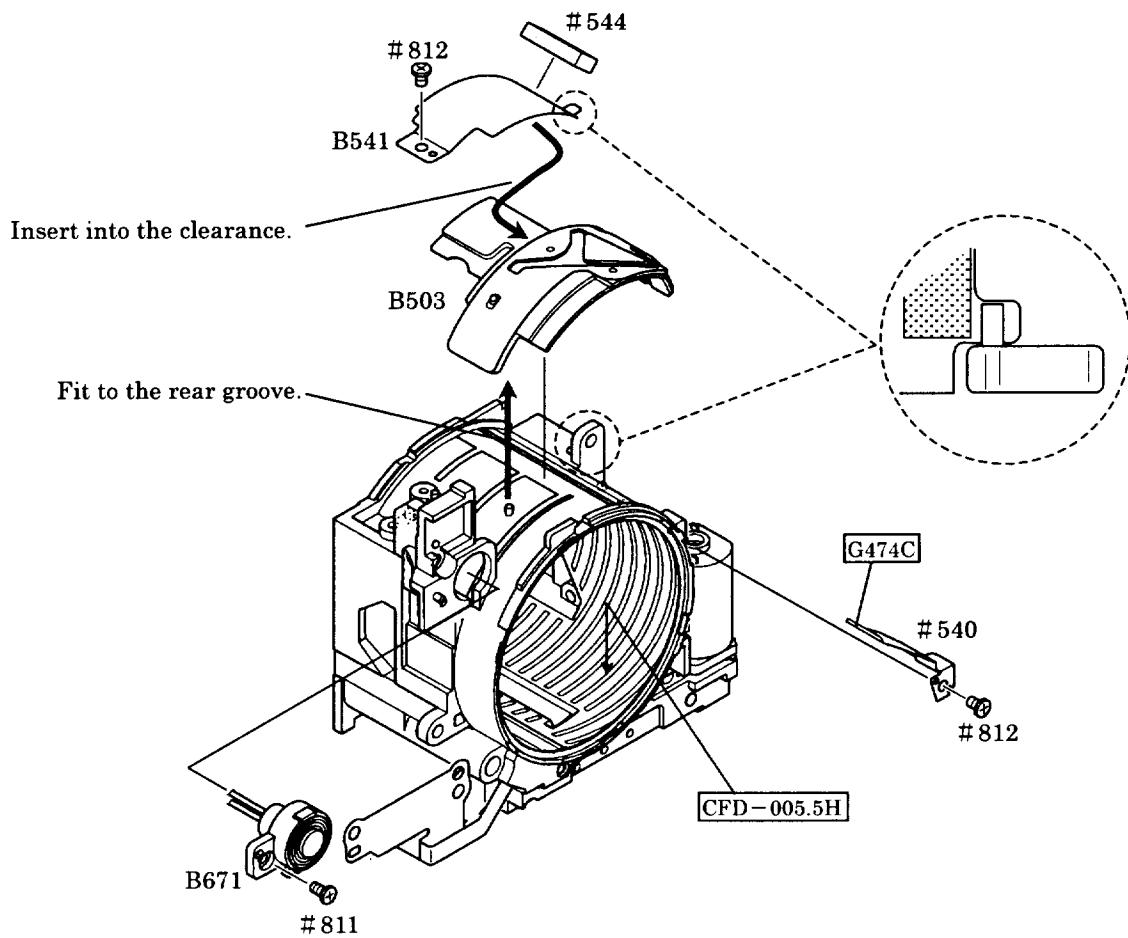

[Reference]

If one of the two gears (#655) is removed, the work is easier.

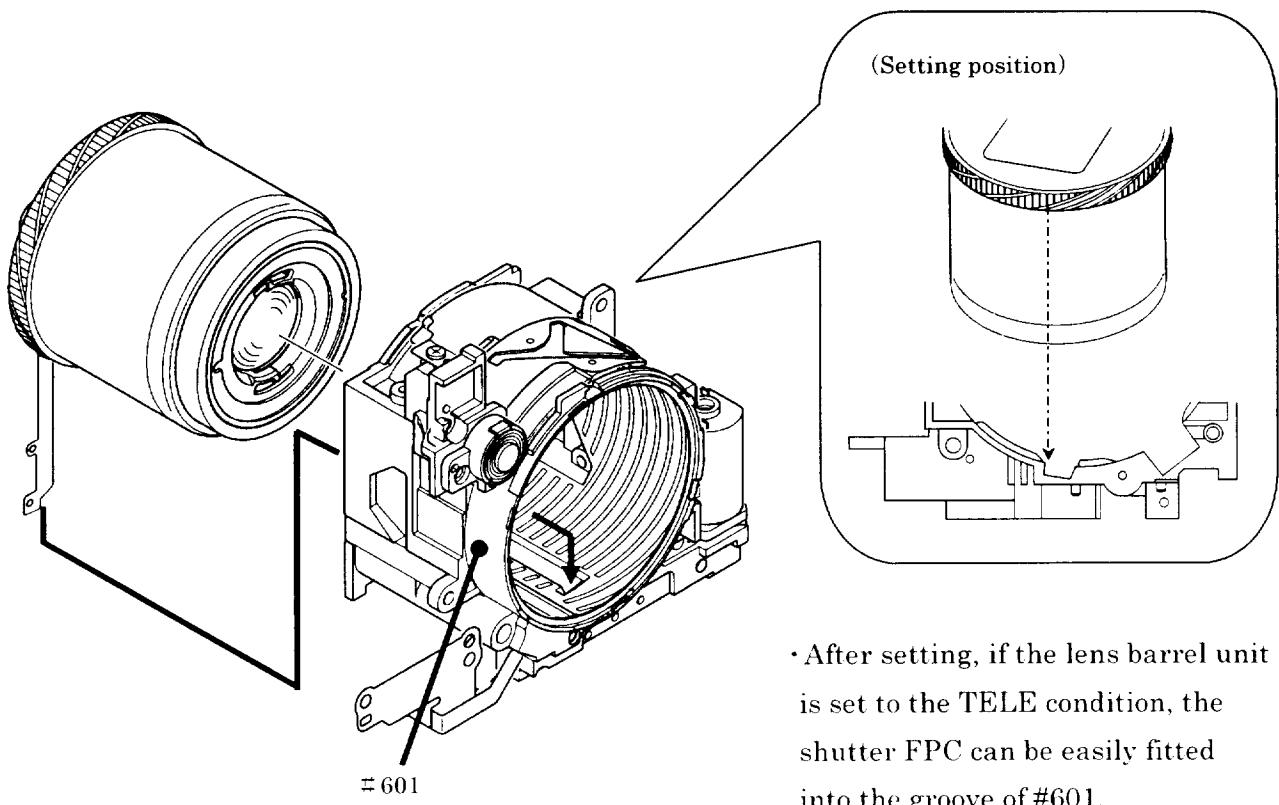

The procedures in the subsequent pages are described on the assumption that the above has already been done.

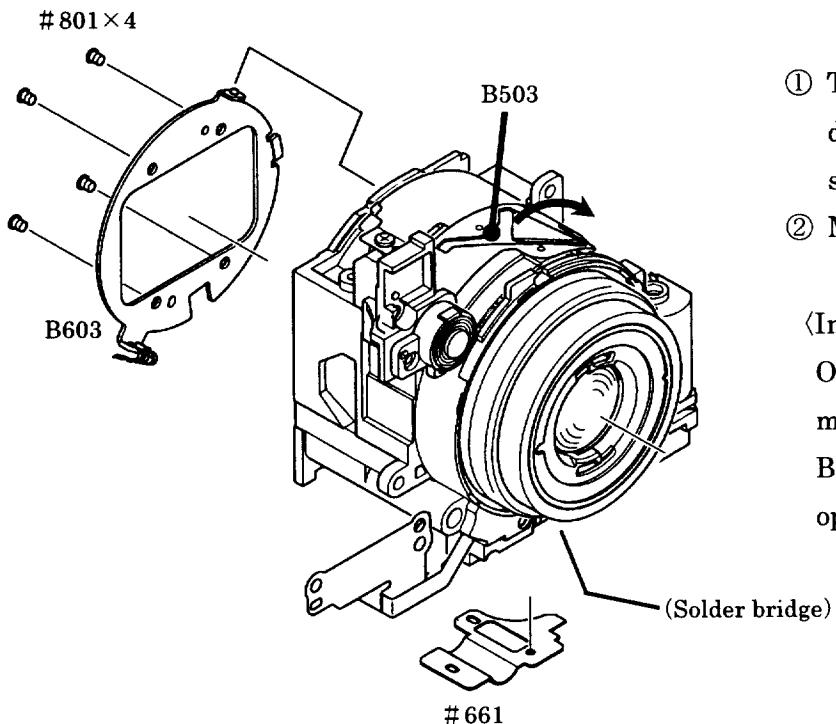

LENS BARREL FPC

FINDER CAM GROUP

LENS BARREL

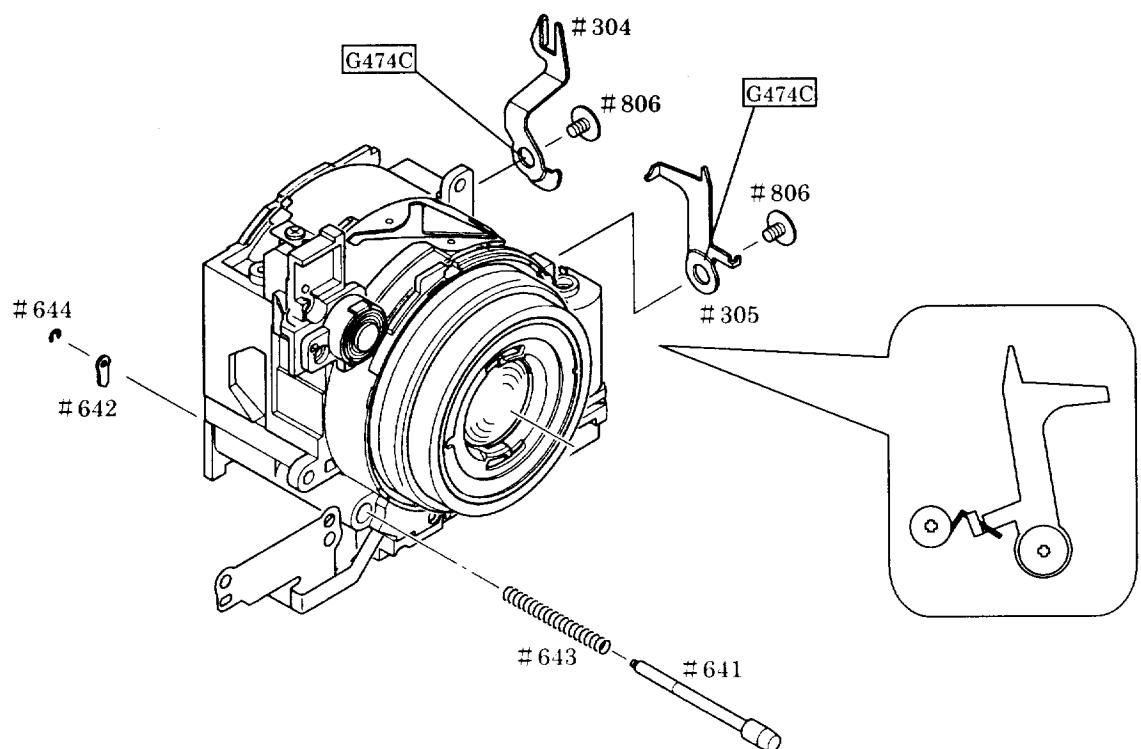

- ① Turn B503 in the arrow mark direction till it touches the stopper.
- ② Mount B603.

⟨Inspection⟩

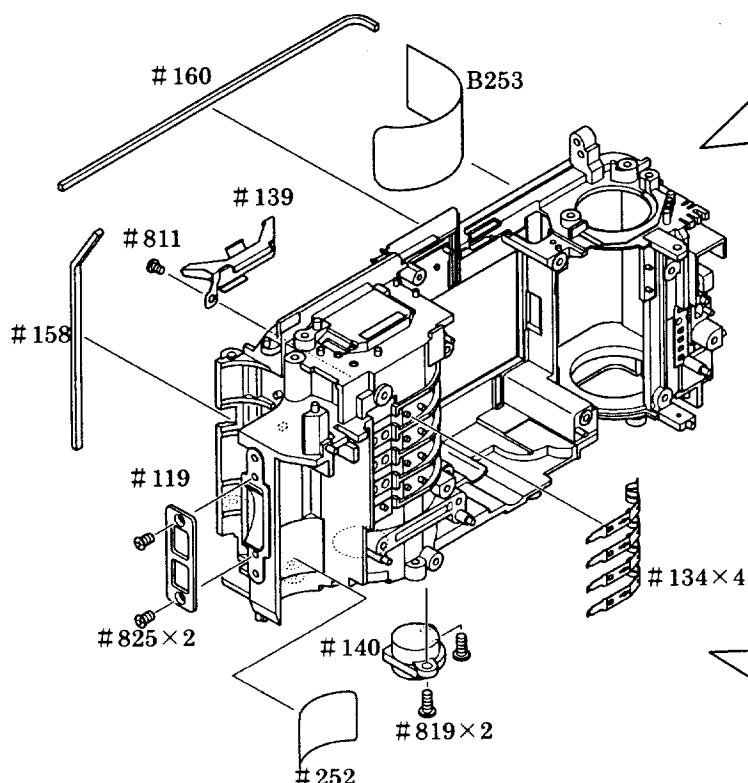

Operate the lens barrel unit manually and make sure that B503 is actuated in a coupling operation.

SB LEVER

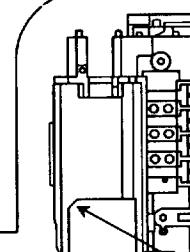

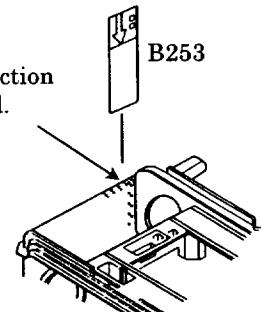

2. REAR BODY

DX CONTACT, FILM HOLDER, TRIPOD SOCKET

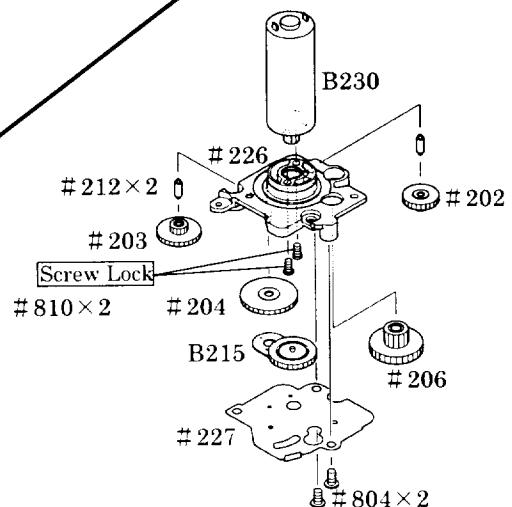

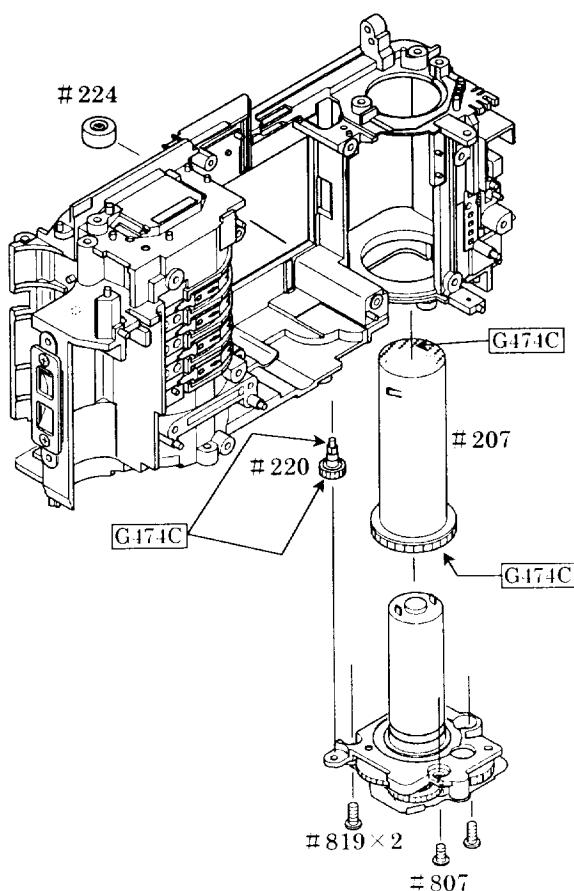

• Regard the hatching section as standard.
B253

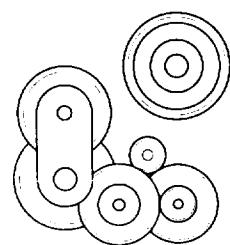

• Fit these end faces to each other.
#252

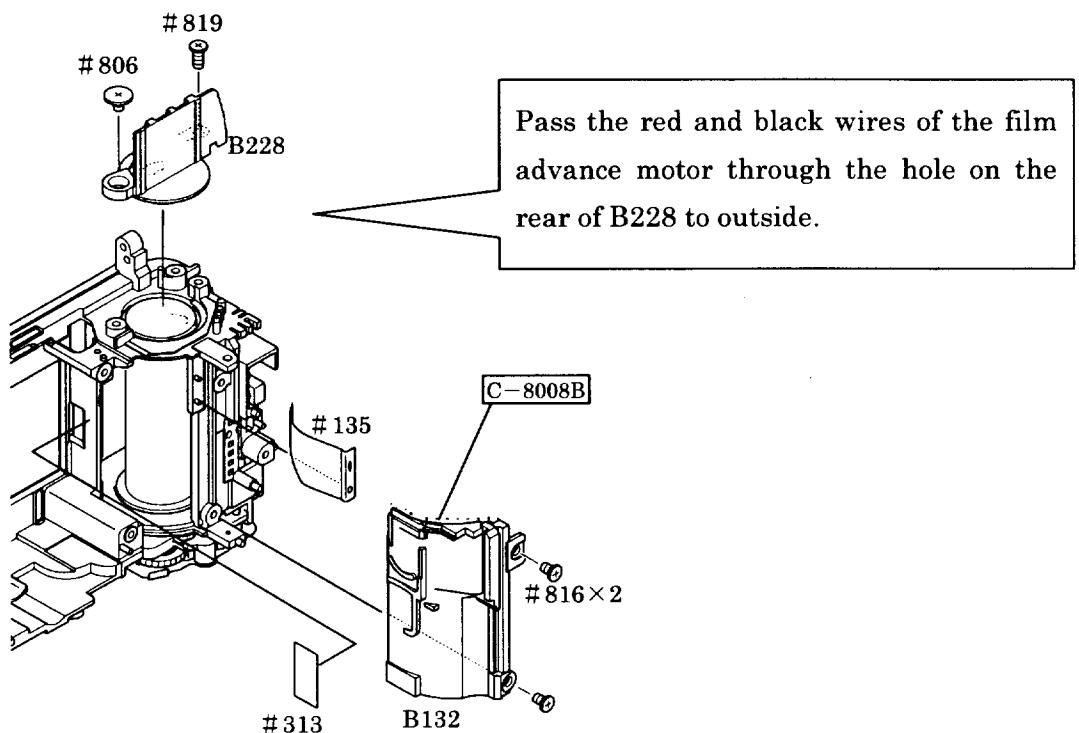

SPOOL, FILM ADVANCE MOTOR

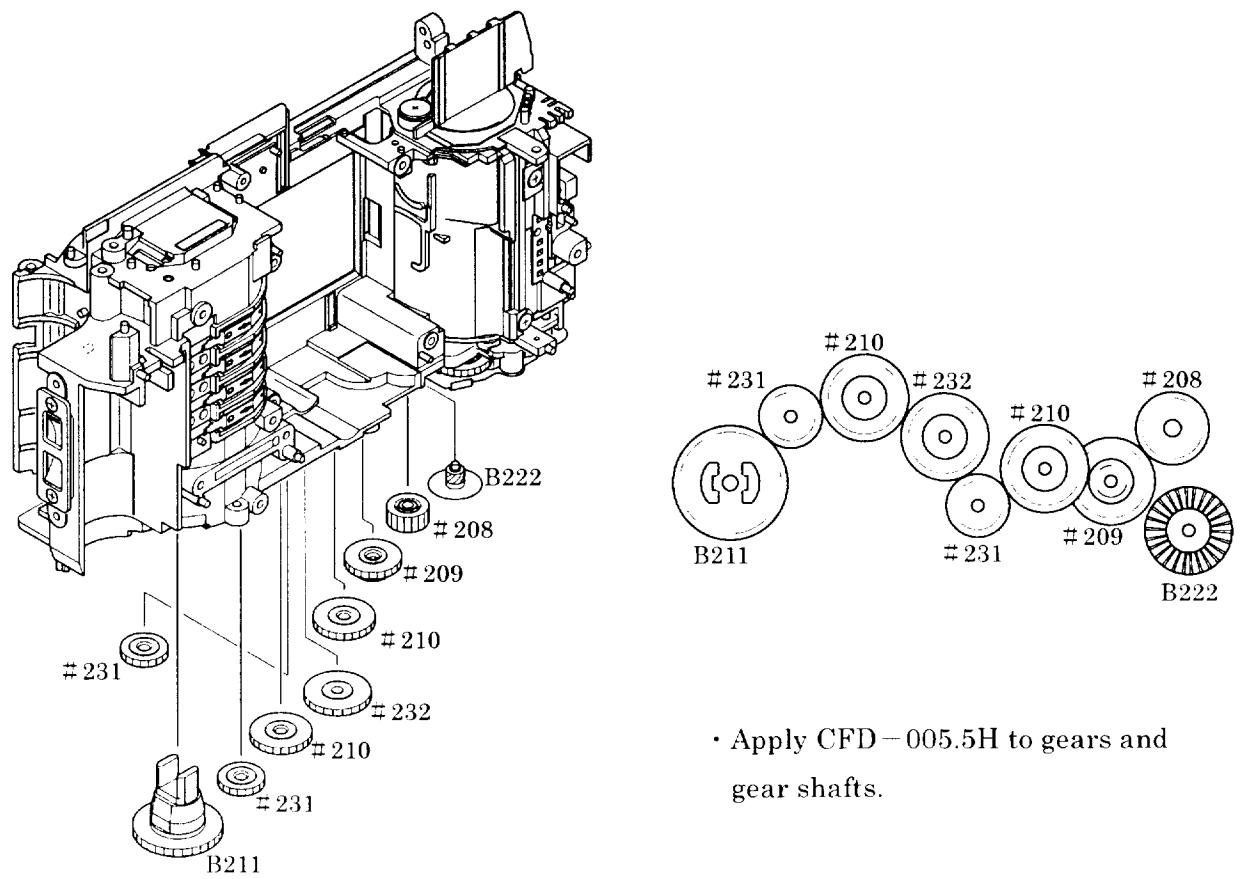

• Apply G474C to gears.

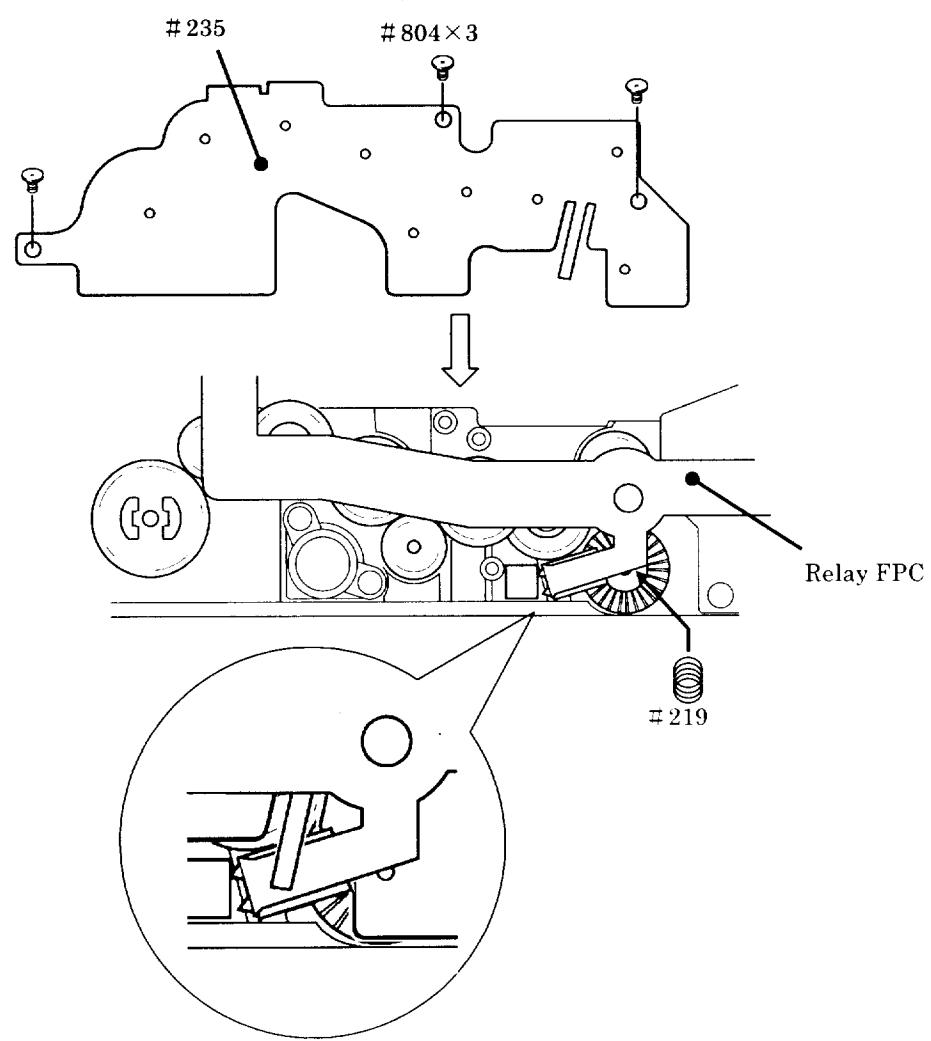

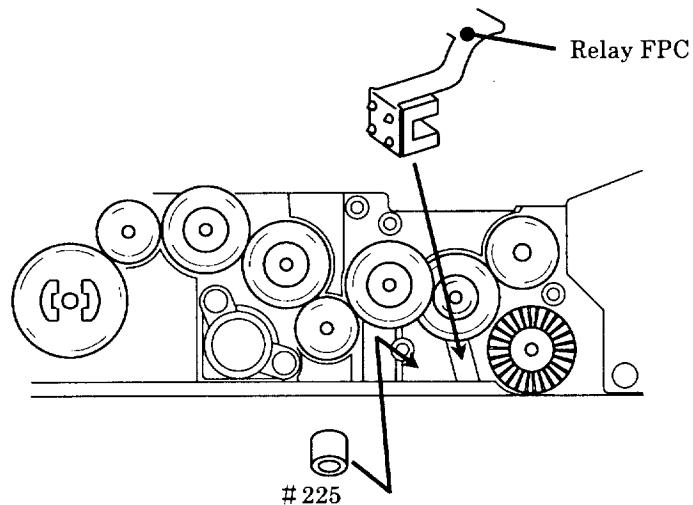

SPOOL COVER, FILM ADVANCE HOLDER

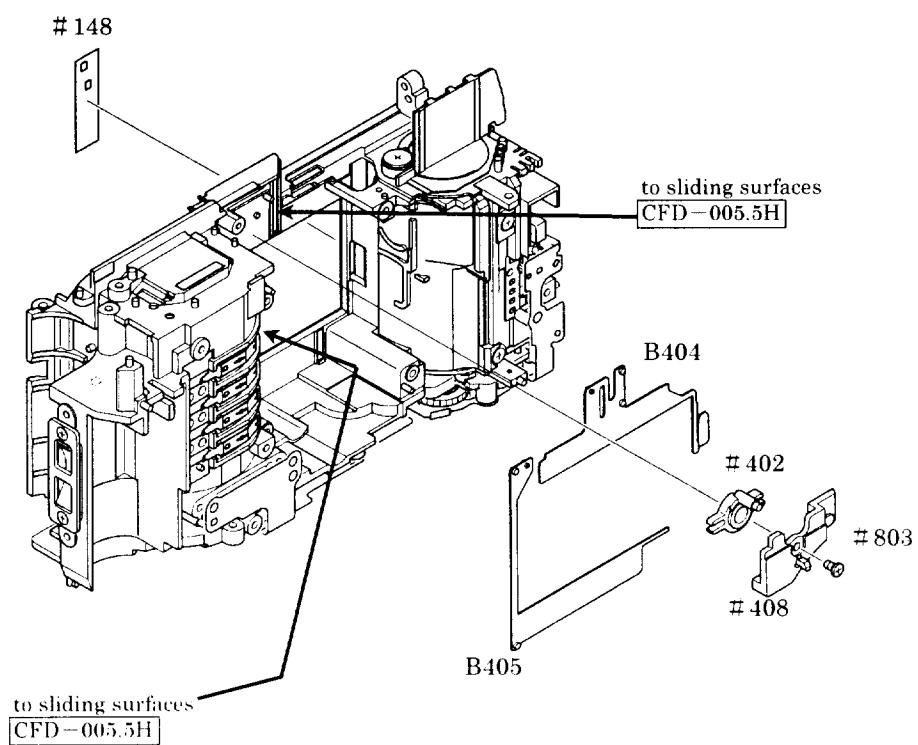

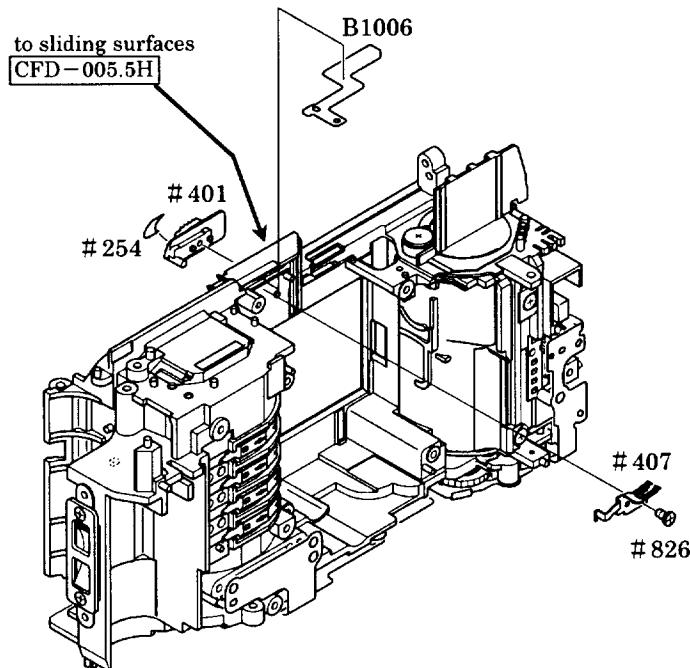

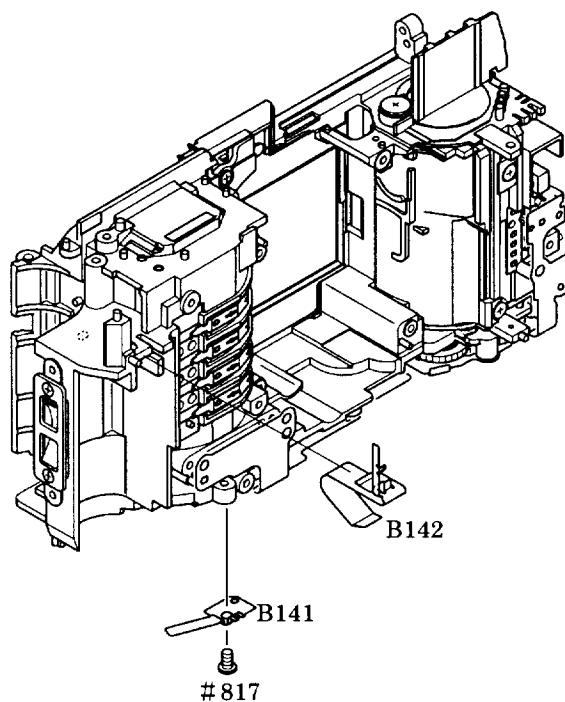

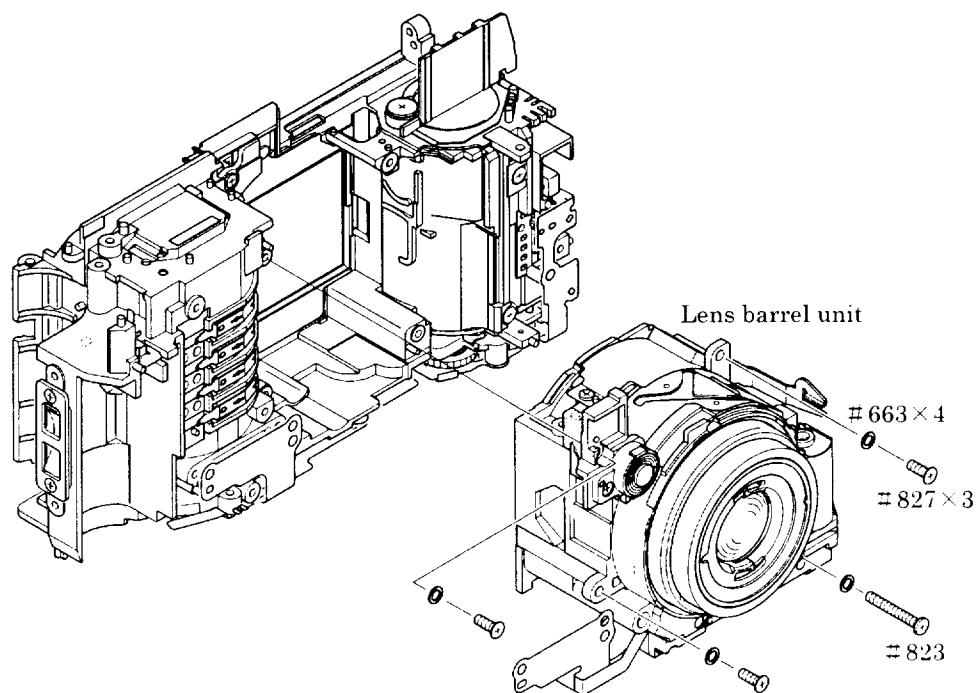

FILM ADVANCE GEAR GROUP

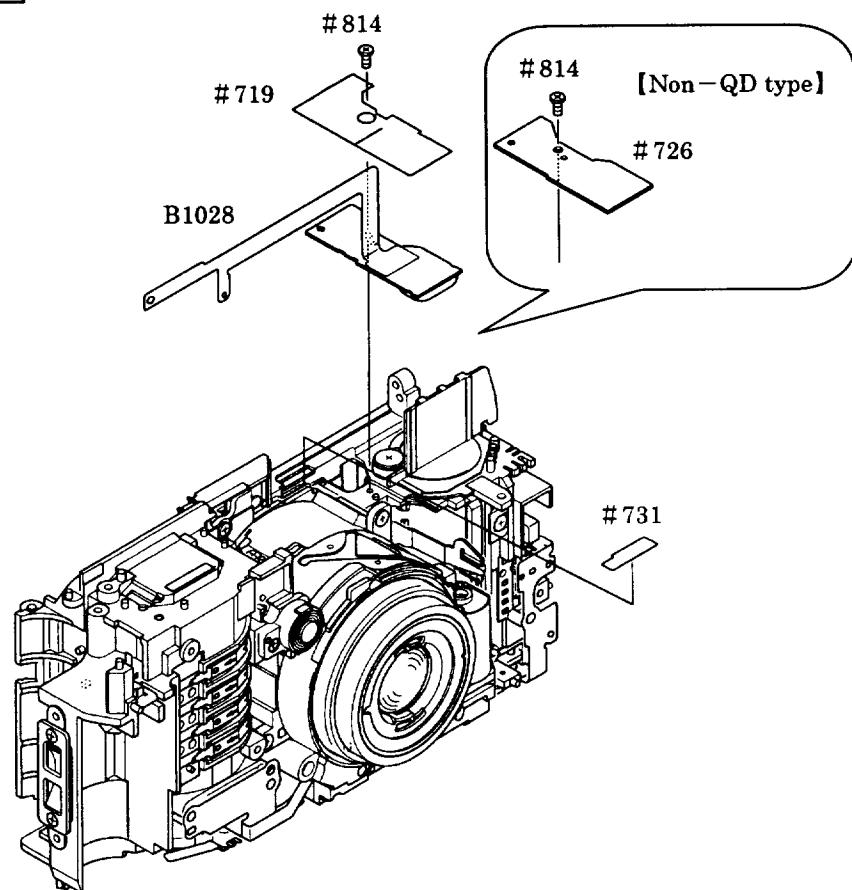

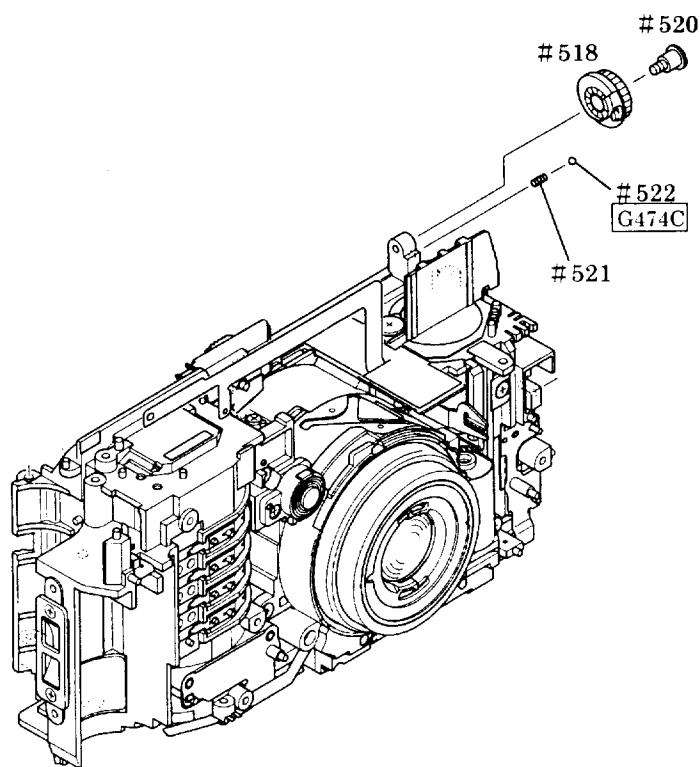

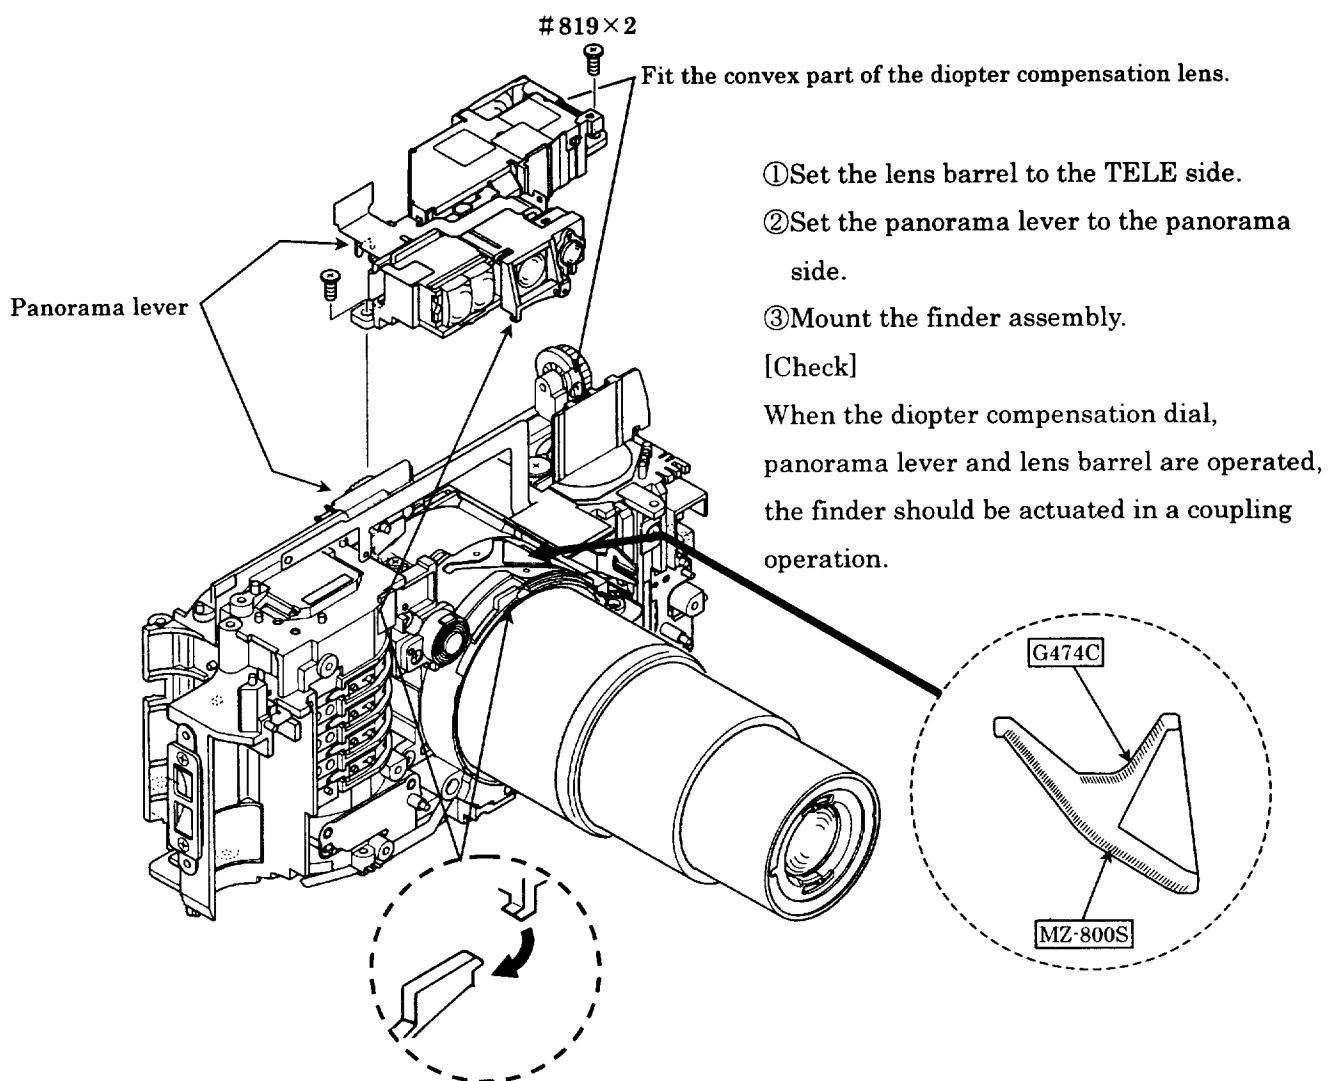

PANORAMA LEVER, PANORAMA UNIT

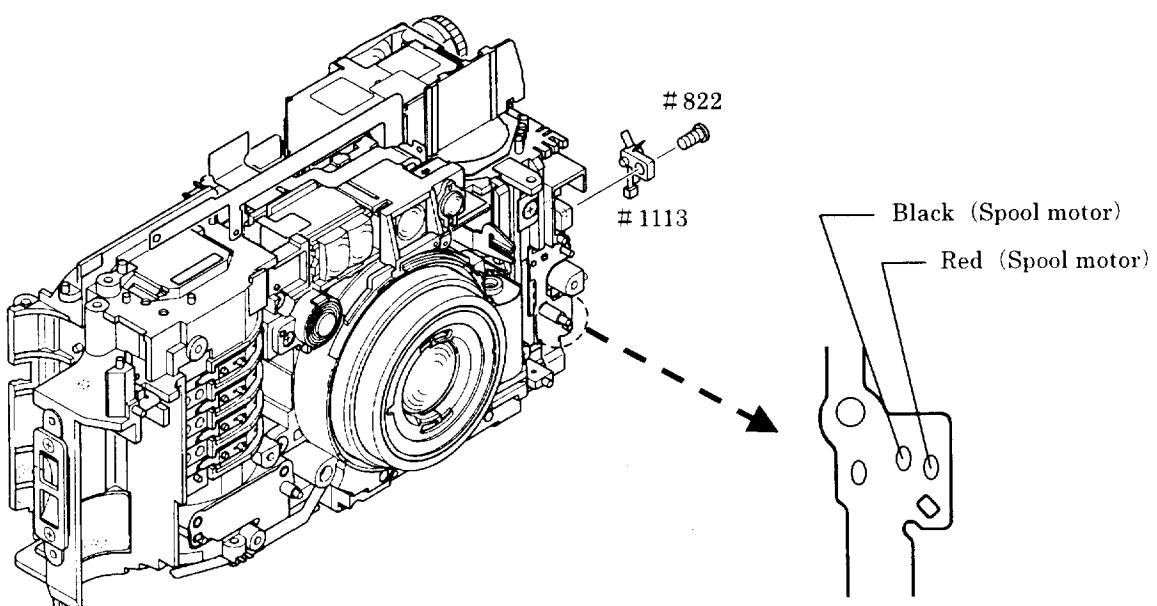

BATTERY CONTACT**HOW TO ASSEMBLE THE LENS BARREL AND THE REAR BODY**

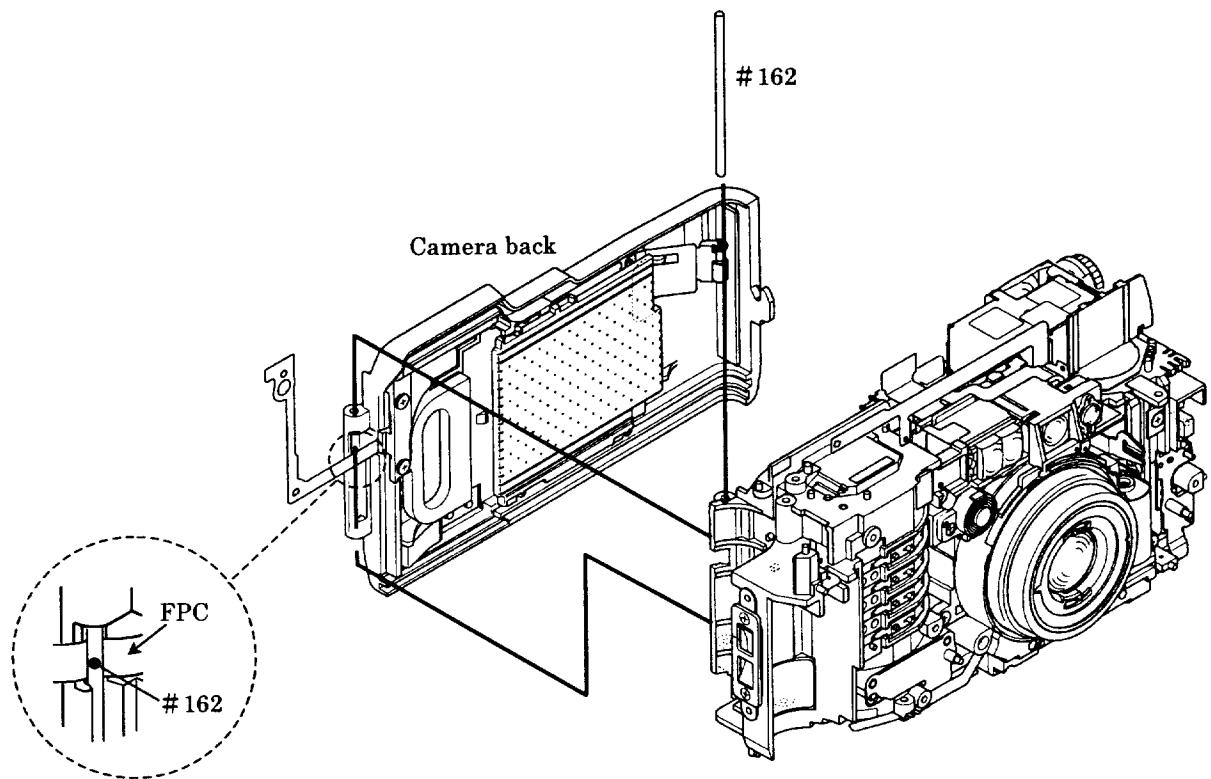

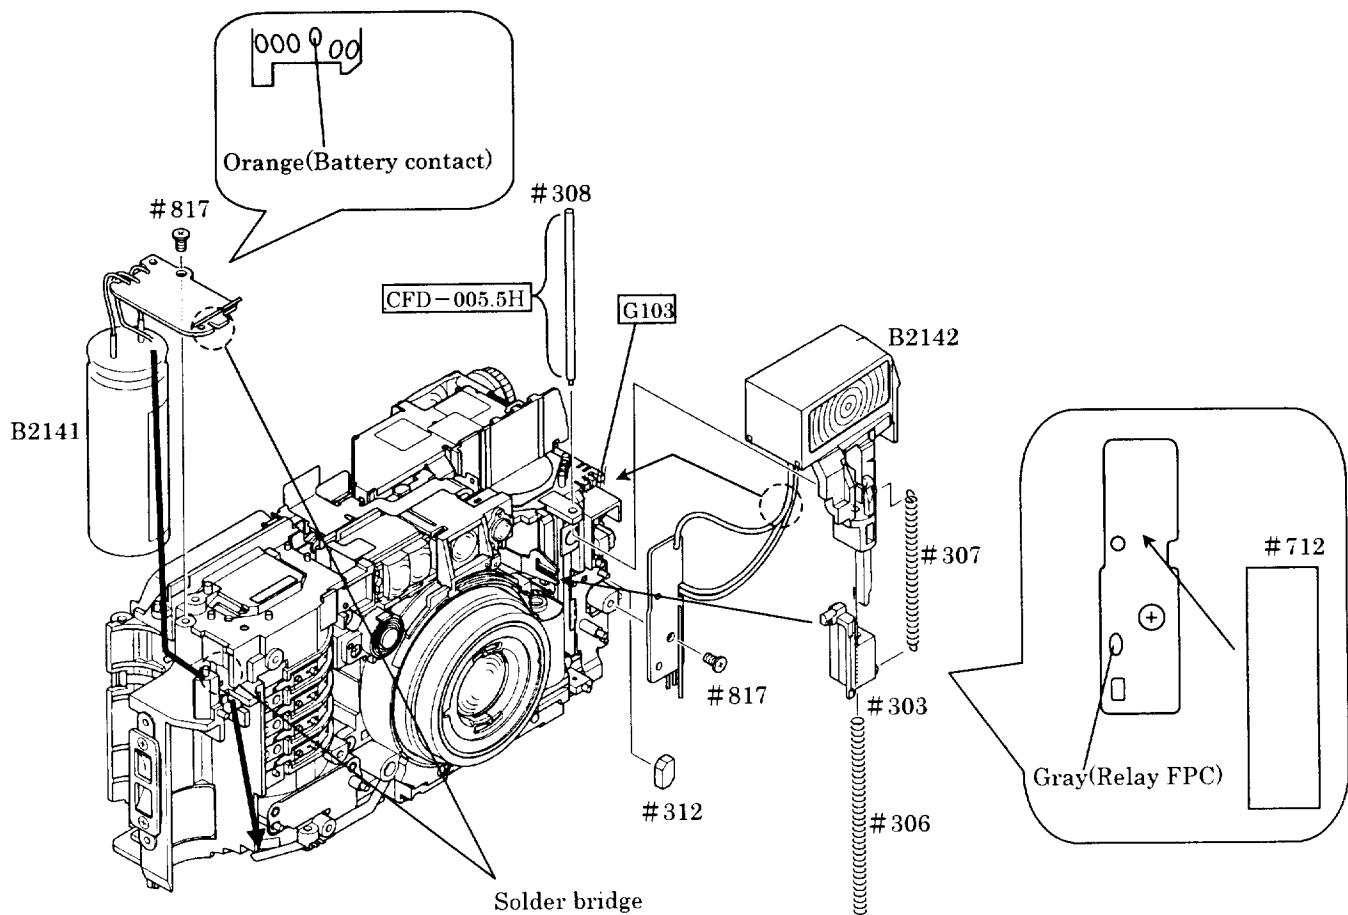

DATE MODULE UNIT**DIOPTER COMPENSATION DIAL**

FINDER ASSEMBLY

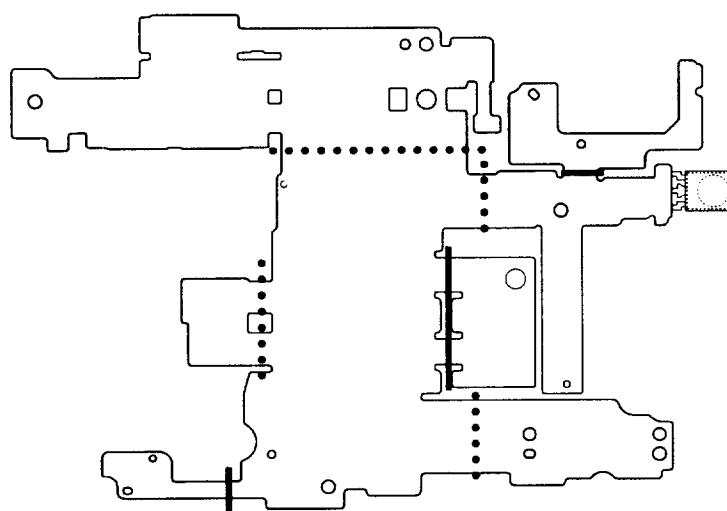

CAMERA BACK SW

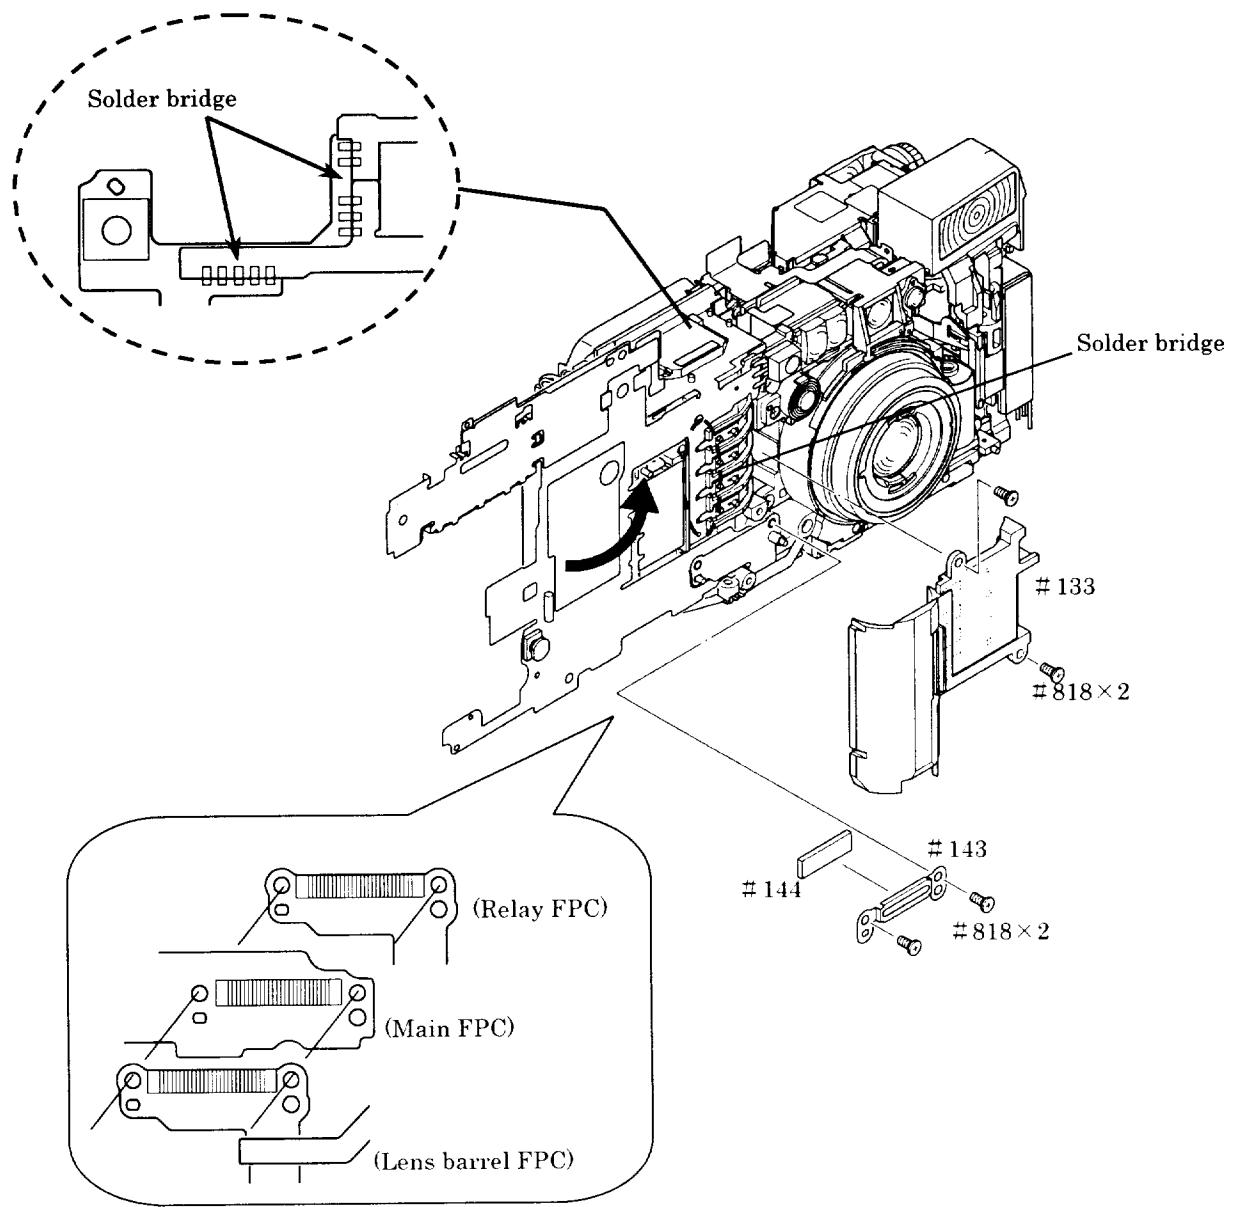

CAMERA BACK**SB UNIT, MAIN CAPACITOR**

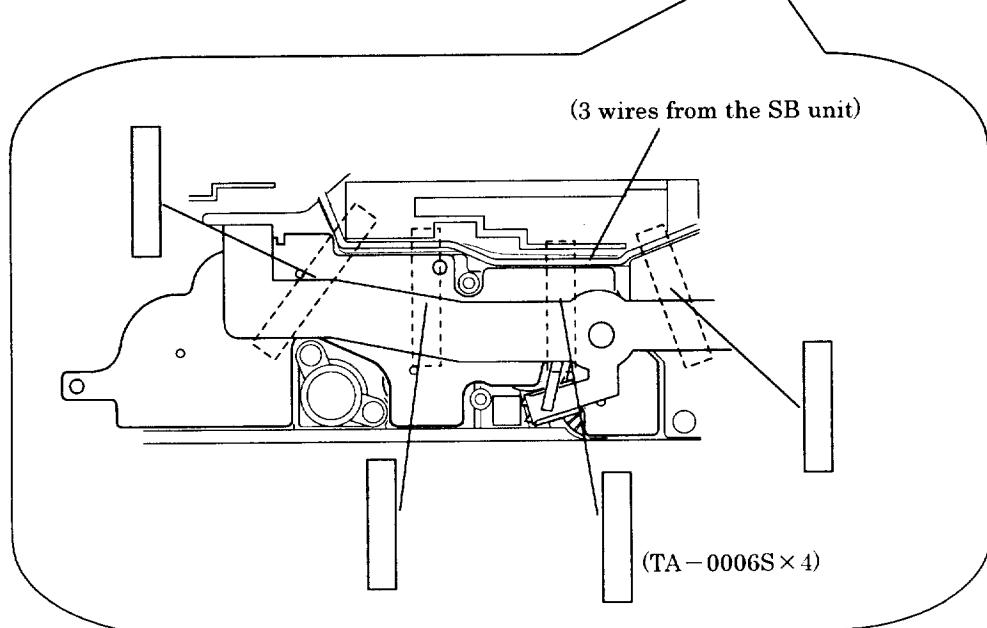

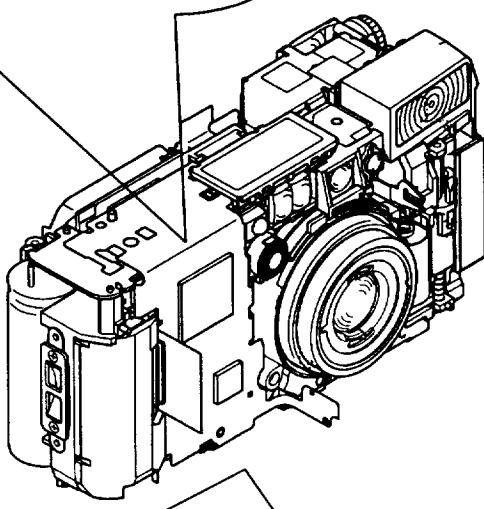

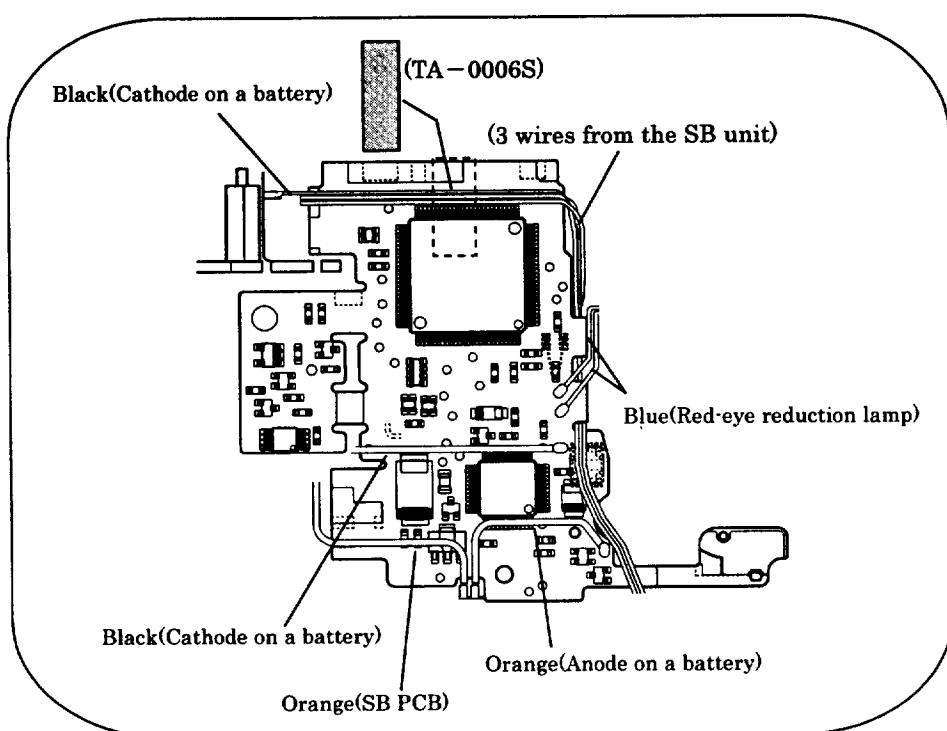

MAIN FPC

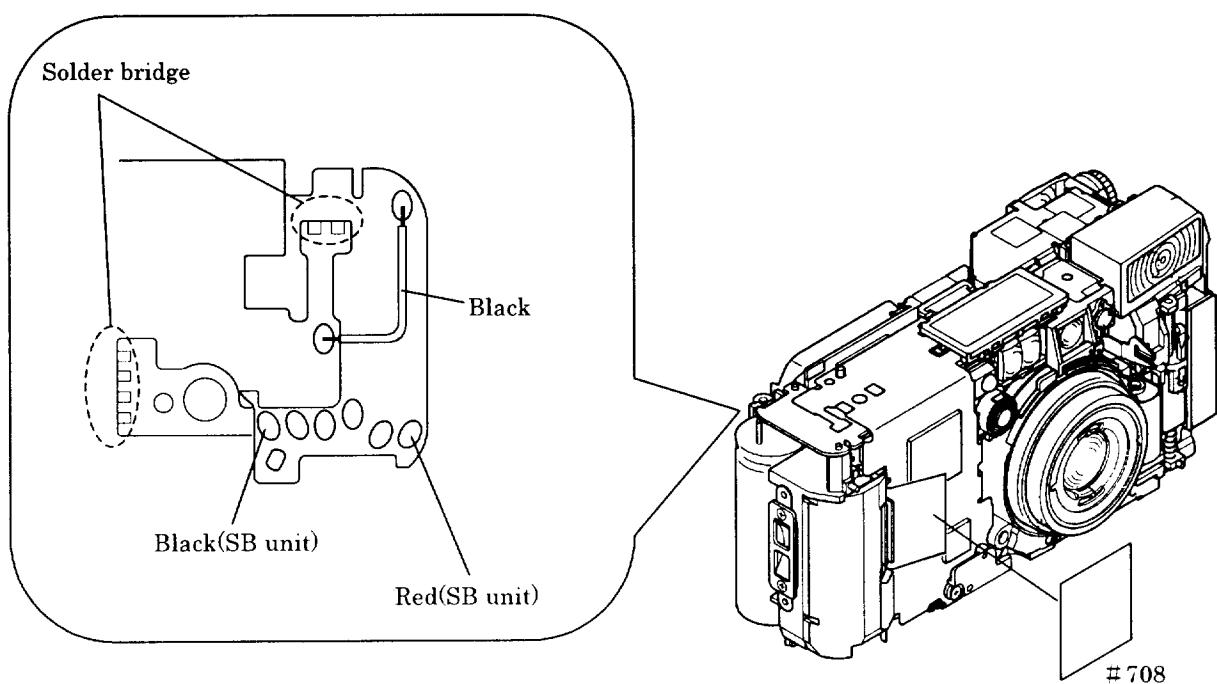

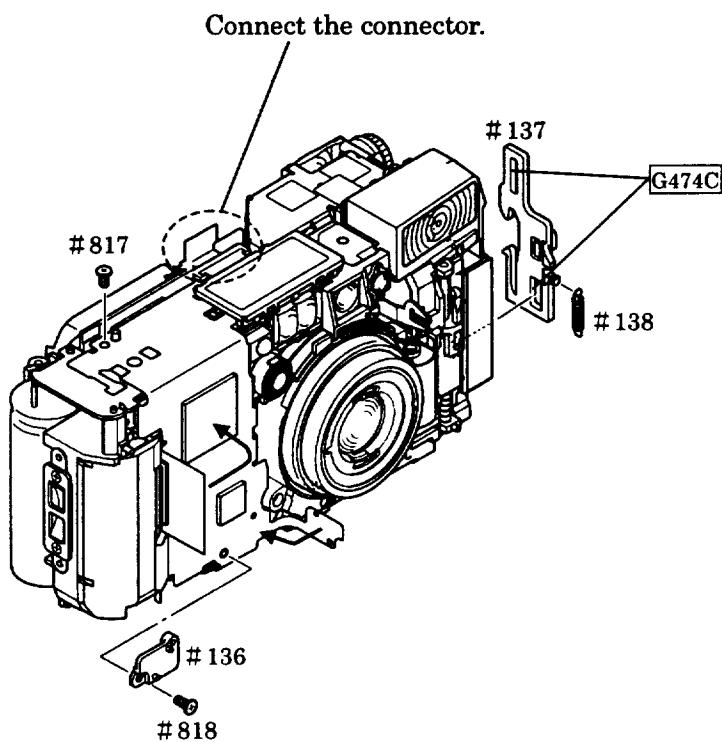

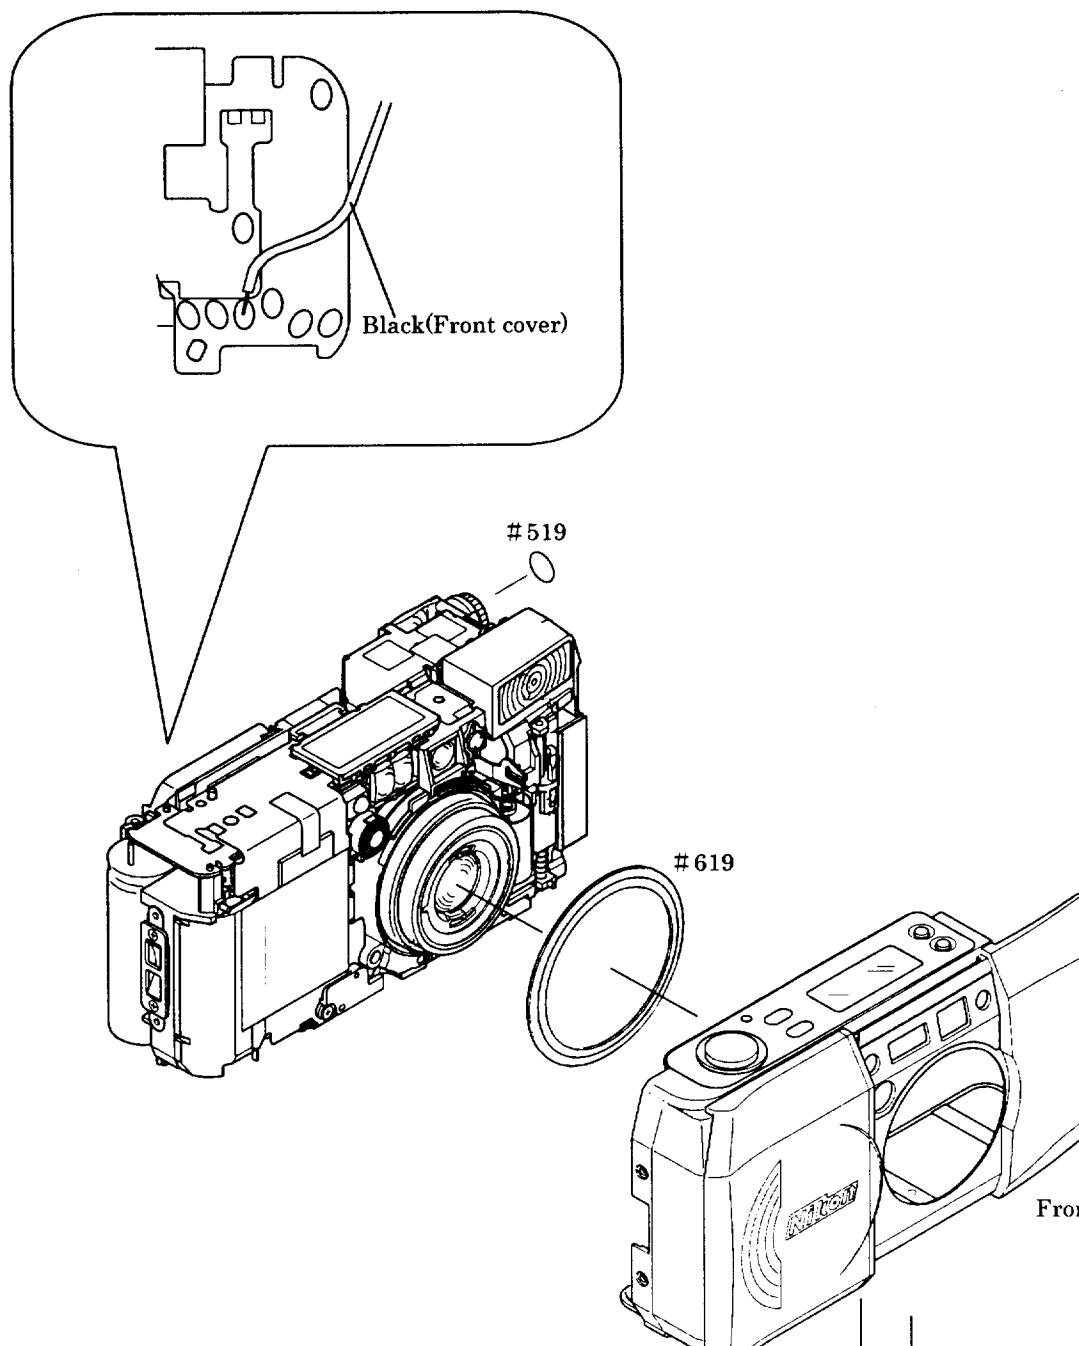

(Main FPC)

— Fold outside
..... Fold inside

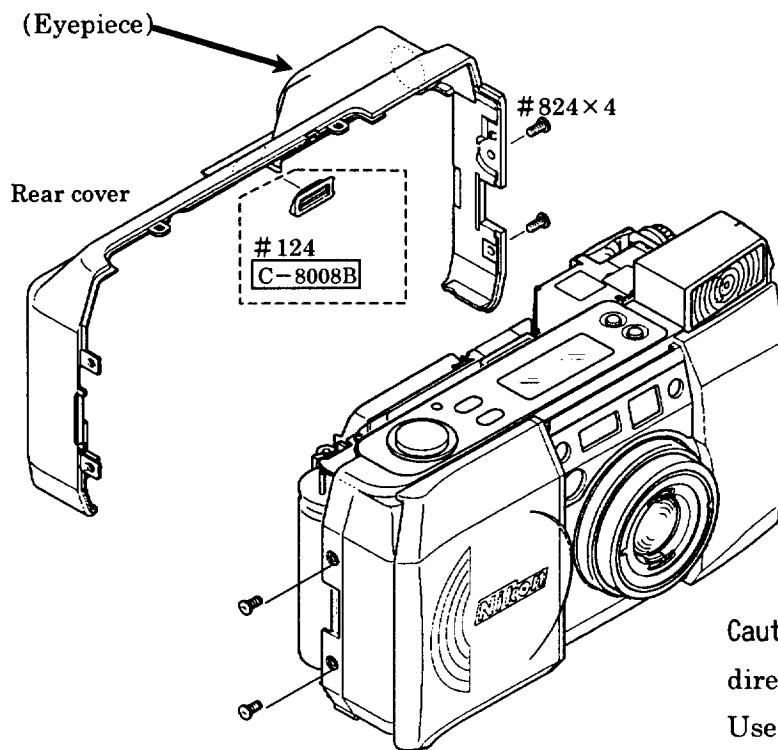

ARRANGE WIRES

CAMERA BACK LOCK-RELEASE LEVER

FRONT COVER

Caution: If one gear (#655) has been removed in Page A4, set it at this time.

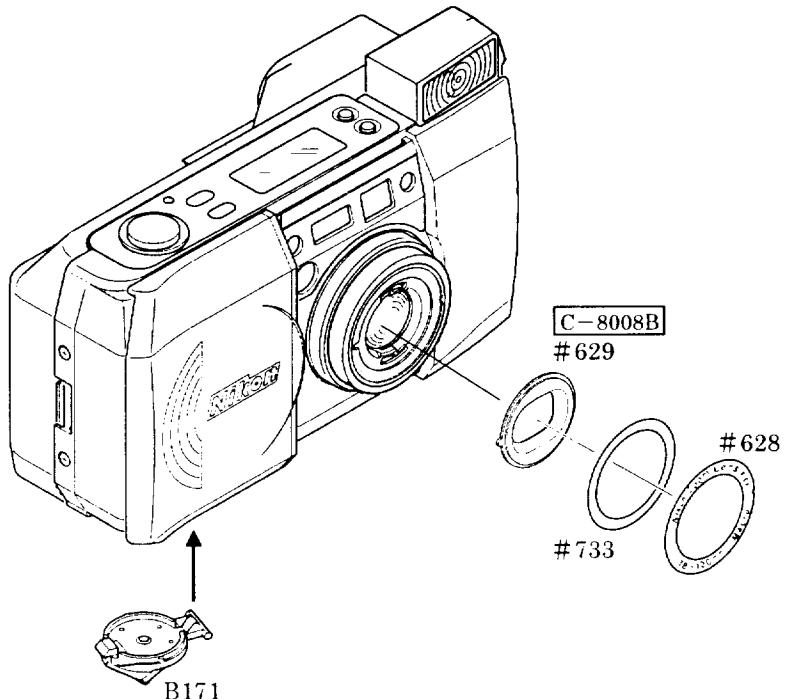

REAR COVER

• #124 is used only for the body without panorama.

Caution : Don't touch the eyepiece unit directly.

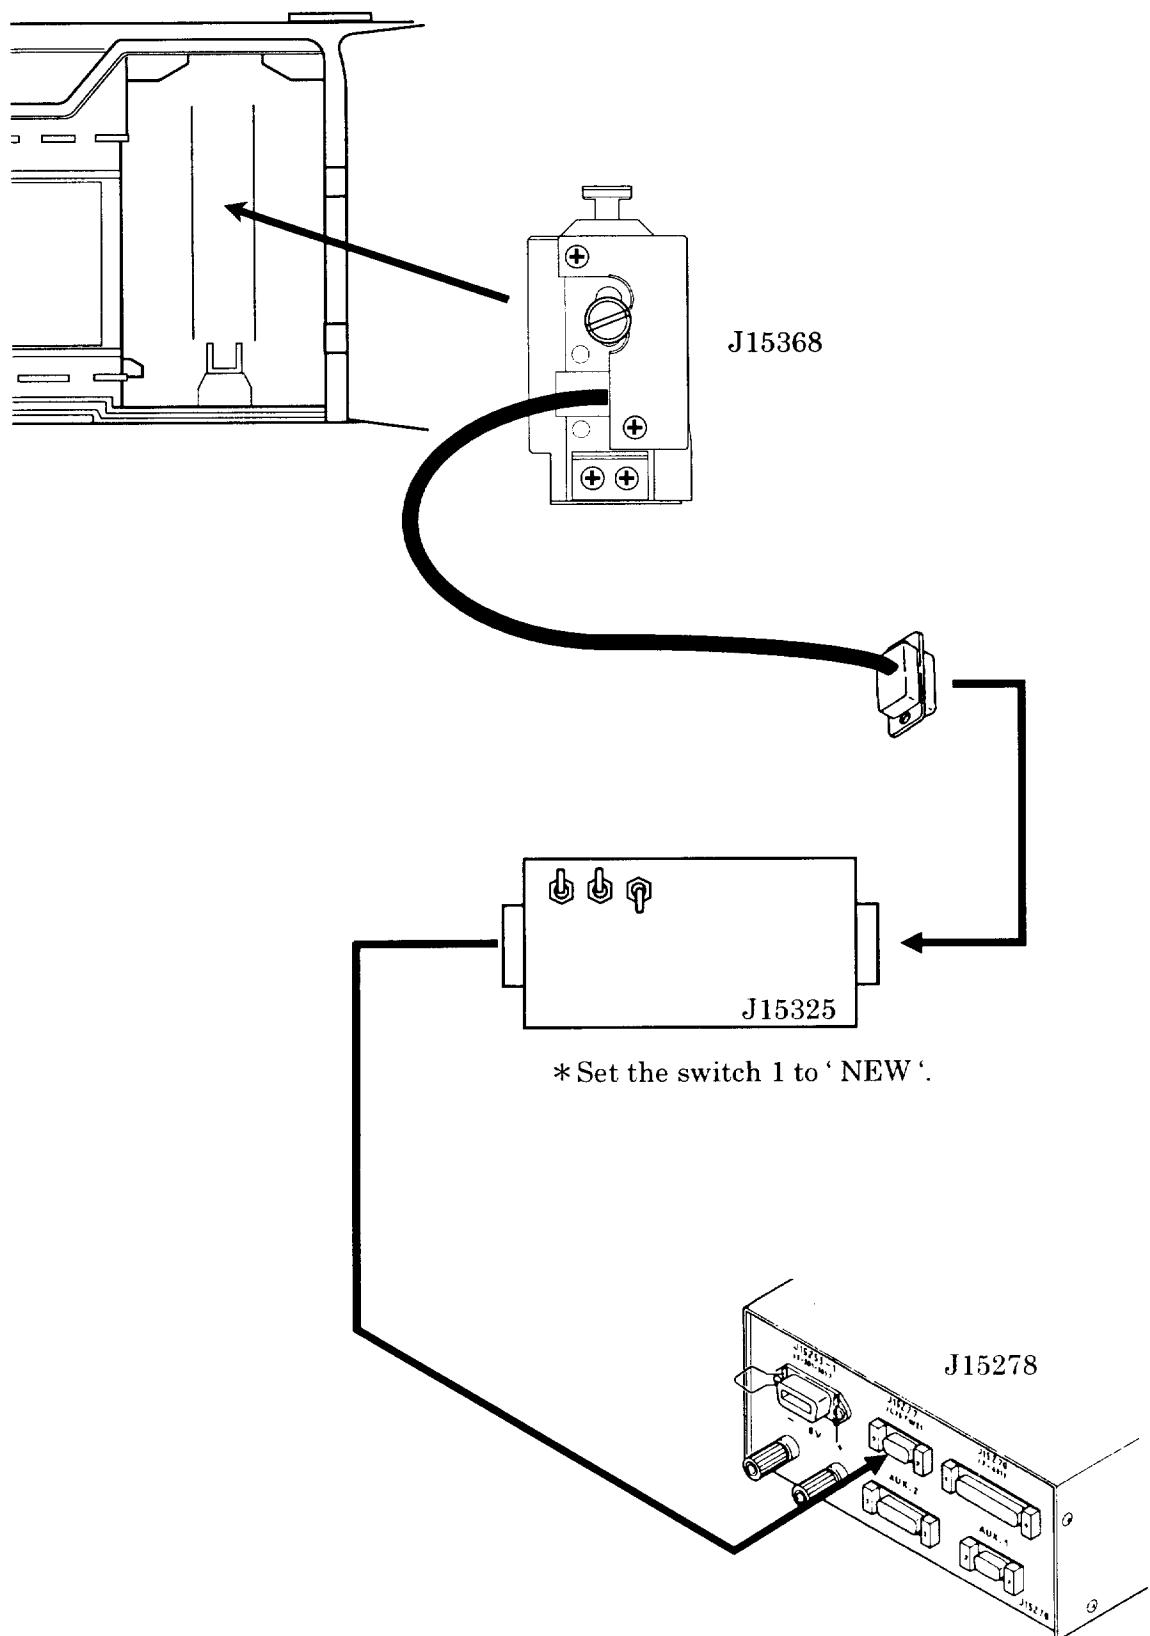

Use a special cloth for cleaning.

Refer to TECHNICAL INFORMATION
Ref. No. 99086.

BATTERY CHAMBER COVER

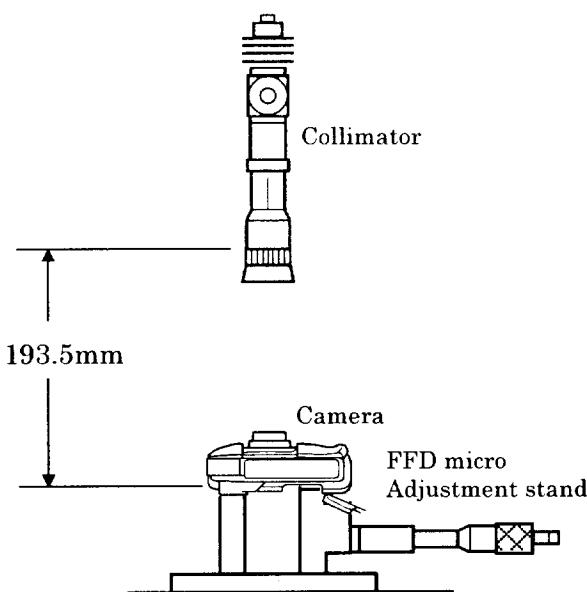

3. INSPECTION AND ADJUSTMENT

HOW TO CONNECT THE CAMERA WITH THE COMMUNICATION TOOL(S)

INSPECTION AND ADJUSTMENT OF BACK FOCUS

- Adjustment using a personal computer

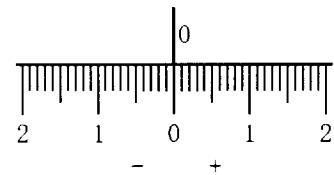

| Zoom position | Standard (μm) |
|---------------|----------------------------|
| 1 (WIDE end) | 1.5 ± 2.60 |
| 2 | 2.0 ± 3.70 |
| 3 | 2.5 ± 4.20 |
| 4 | 1.5 ± 4.60 |
| 5 | 0 ± 4.60 |
| 6 (TELE end) | -6.5 ± 5.00 |

- Inspection in manual inspection mode

- ① See the above-mentioned to set inspection tool.
- ② Set the camera to bulb and infinity focus(00h) in manual inspection mode (see page M3,4,5)
- ③ Read the micrometer indication of the FFD adjustment micro stand(J15327) and make sure it is within standard.

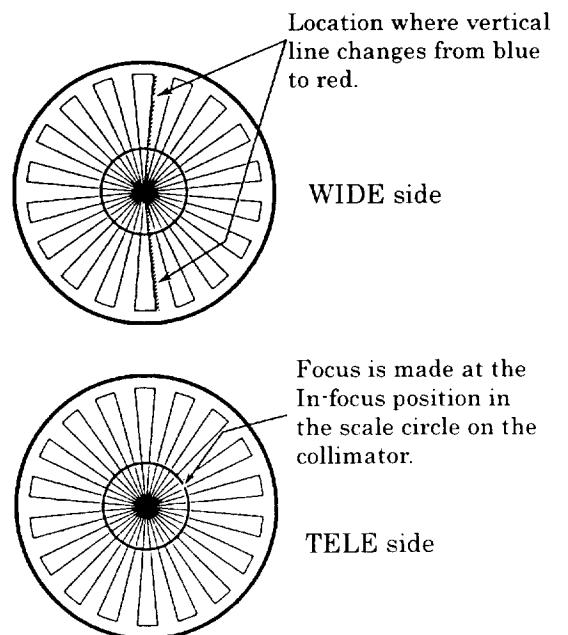

If the result is out of the standard range, be sure to perform inspection and adjustment using a personal computer.

- ① Rotate the objective lens of collimator(J19019) to set the scale to 0mm(0 calibration). Do not rotate the objective lens afterward.

- ② Set the display of the FFD adjustment micro stand(J15291) to "0.000".
- ③ Run the inspection and adjustment software and connect between the camera and the personal computer.
- ④ Select "Back focus inspection and adjustment", and make each adjustment as indicated on the computer display.

* Collimator focusing position

AE INSPECTION AND ADJUSTMENT

- Inspection and adjustment through PC operation

Perform the inspection and adjustment in accordance with what is instructed on the PC screen.

Precautions

Because the camera is automatically set to ISO 100 by the adjustment software, the shutter tester should be set to ISO 100 as well.

- Inspection in the manual inspection mode

1. Check the EV by with the manual inspection mode. (Refer to page M3, 4, 5)

2. Check the AE by with the shutter tester.

In the out-of-criteria case, make sure to perform its inspection and adjustment through PC.

| | |
|----------|--------------------------------|
| Standard | $0 \pm 0.9 \text{ EV (LV 6)}$ |
| | $0 \pm 1.2 \text{ EV (LV 12)}$ |
| | $0 \pm 1.6 \text{ EV (LV 15)}$ |

ADJUSTMENT FOR SETTING DELAY TIME IN THE SHUTTER MECHANISM

- For replacement of the shutter mechanism unit or the main FPC unit, be sure to adjust it.

Besides, after rewriting, conduct an inspection for AE.

1. Start up the inspection and adjustment software and then connect the camera with PC.

2. Follow the instructions on the PC screen for adjustment.

AF INSPECTION AND ADJUSTMENT

- Inspection and adjustment through PC operation

According to what PC says on the screen, perform adjustment and inspection on the AF's accuracy.

- Inspection in the manual inspection mode

1. Set up to the AF result display mode in the manual inspection mode. (Refer to page M3, 4, 5)

2. Confirm whether or not the AF step is within its criteria in the specified range. (Refer to page M7)

In the out-of-criteria case, make sure to perform its inspection and adjustment through PC.

ANY CERTAIN ADJUSTMENT ITEM(S) TO BE REQUIRED WHEN REPLACING
