Answer :

There are a couple different types of TekVPI interfaces, one with a notch and one without. The notch was implemented later and was put in place because the front end was designed differently and communicates uniquely with those types of probes. Specifically the TPP0500/1000 series probes.

The scopes with the TekVPI interface are the MSO/DPO2000/3000/4000/5000/7000
