A kind staff member at Tektronix Technical Services finally located and provided heretofore difficult to find instructions for the TDS3PRTprinter. This document is now posted on Tekwiki at <https://w140.com/tekwiki/wiki/TDS3PRT>.

This convenient small thermal printer plugs into the rear compartment of TDS 3000 and TDS3000B series scopes, but has been discontinued

Although the intended paper rolls are NLA, Sony paper designed for medical printers can be used as a substitute. Sony type UPP-110S is a matt-finish paper while UPP-110HG is the high-gloss version. These print fine, but as the rolls are too large in diameter for the TDS3PRT, the paper must first be rewound to 1.2-inch diameter rolls. Also, since the medical paper seems to have a plasticised backing, it must be cut with knife or scissors as the printer's plastic cutting edge stretches, rather than cuts it.

Bruce, KG6OJI
