Subject:	Tektronix Request : 800444 - TDS3000 - Web Request

Resolution Description :

the error log it to be found under system config/ diags/error log.
when you send a TDs3000 series in the service you get version 4.26. This version is
not in the website its only by the service.

in this version the error log is present.

Request/Inquiry :

In most (All?) of the non Windows based TDS's the Error Log can be retrieved via GPIB
with the command ERRLOG?. This was also true for TDS3000 series up until and including
F/W 3.39 but in F/W 3.41 it doesn't work anymore. Has this function been removed or is
there another command that does the same thing now ? /Hakan   Attachments: null.
