INSTRUMENT SERIAL NUMBERS

Each instrument has a serial number on a panel insert, tag, or stamped on the chassis. The first number or letter designates the country of manufacture. The last five digits of the serial number are assigned sequentially and are unique to each instrument. Those manufactured in the United States have six unique digits. The country of manufacture is identified as follows:

- B000000 Tektronix, Inc., Beaverton, Oregon, USA
- 100000 Tektronix Guernsey, Ltd., Channel Islands
- 200000 Tektronix United Kingdom, Ltd., London
- 300000 Sony/Tektronix, Japan
- 700000 Tektronix Holland, NV, Heerenveen, The Netherlands

INTRODUCTION

This guide contains two references of the GPIB commands listed in Appendix A of the Programmers Reference Guide included with the 2440. The first reference, "GPIB Command Reference," sorts the commands according to type: Vertical Commands, Horizontal Commands, etc.; the second reference, "Alphabetical GPIB Command Reference," according to the alphabetical order of the commands. Both lists omit the descriptions for the commands—consult Appendix A of the Programmers Reference Guide for those descriptions.

Also included in this guide are the Event Codes and their descriptions. These are codes which the 2440 issues over the GPIB that represent errors, warnings, and other messages of interest to System Programmers.

At the end of the guide are two charts. The first chart shows the character set the 2440 displays. The second chart shows ASCII symbols and their GPIB equivalents. See the Programmers Reference Guide for information on how to use these charts.

GPIB Command Reference

Throughout this Table (and the following Table), headers and arguments are listed in a combination of bold upper case and nonbold lower case letters. The instrument accepts any abbreviated header or argument containing at least all the characters shown in bold upper case. Any characters added to the abbreviated (upper case) version must be those shown in lower case. For a query, a question mark (?) must immediately follow the header. Link arguments shown in brackets ([]) are defaults (don't send the brackets as part of the argument). In any command that has a default, omitting the link argument sets the default. For example, 'RUN ACQUIRE' and 'RUN' are equivalent.

Some headers use numeric arguments in the ANSI X3.42 standard format. This format states that there are three types of numbers; integers, reals, and reals with exponents (these are called NR1, NR2, and NR3 respectively). Each type of number is composed of ASCII digits with the most significant digit sent first. Any of these three number types is acceptable whenever a numeric argument is required. Here are some examples of each of the three number types:

| | | | |
|-------|------------|------------|-----------|
| <NR1> | 375, | 0, | -23 |
| <NR2> | +12.589, | 1.37592, | -00037.5 |
| <NR3> | -1.51E+03, | +51.2E-07, | +00.0E+00 |

Sometimes in one of the argument columns of this table <types> or <data src> appears and references a footnote at the bottom of the page. In this case, the argument to use is any one of those in the referenced footnote.

Event Tables

Command Error Events

Command Errors are issued when a GPIB "grammatical" error has been made. Check the spelling and structure of the input strings. Set CER to ON to receive SRQ's when any of these events occurs. If CER is OFF, the 2440 will not assert SRQ.

| Code | Description |
|------|---|
| 108 | Checksum error in CURVE transfers. |
| 109 | Count = 0 or EOI set on byte count. |
| 151 | Symbol or number too long. |
| 152 | Invalid character or control character input. |
| 153 | EOI set on back slash. |
| 154 | Invalid number input. |
| 155 | EOI set on string character before ending quote. |
| 156 | Symbol not found. |
| 157 | Command or query argument is illegal in this syntax. |
| 158 | Character should be a colon. |
| 159 | Valid symbol, but not a legal header. |
| 160 | Character should be a comma, a semicolon, or EOI. |
| 161 | Too many query arguments. |
| 162 | Command only. May not be sent as a query. |
| 163 | Query only. May not be sent as a command. |
| 164 | EOI asserted before waveform was completed. |
| 165 | Incorrect word string input. |
| 166 | Number expected on incoming ascii waveform. |
| 167 | Comma expected on incoming ascii waveform. |
| 168 | Incoming ascii waveform has more than 1024 data points. |
| 169 | Illegal LLSET string. |

Event Tables

Execution Error Events

Execution errors are issued when a particular scope setting doesn't allow the current command to be executed the way the user would like. Set EXR to ON to receive SRQ's when any of these events occurs. If EXR is OFF, the 2440 will not assert SRQ.

| Code | Description |
|------|--|
| 203 | I/O buffers full, output dumped. |
| 250 | Selected recall memory is unset. |
| 251 | Measurement requested on an empty reference memory. |
| 252 | Waveform requested via GPIB is not valid or available. |
| 253 | Too many numbers were sent in (stack overflow). |
| 254 | No Video Option installed when SETTV commands issued. |
| 255 | Target selected for cursors not displayed. |
| 256 | Clear overload condition before changing to 50 Ω coupling. |
| 257 | Waveform selected for reference source is not valid. |
| 259 | No ADD or MULT on previously SAVED waveforms; ENVELOPE waveform invalid. |
| 260 | No cal commands allowed while front panel is doing cal. |
| 261 | No sequence by that name to delete. |
| 262 | Can't save sequence—out of memory. |
| 263 | Can't send a partial waveform to an empty ref. |
| 264 | Not enough edges to extract the parameter. |
| 265 | Asked for rise time but no rising edge. |
| 266 | Asked for fall time but no falling edge. |
| 267 | Delay Measurement targets must have matching Sec/Div settings. |
| 268 | One or more of the following conditions are not satisfied: BASE<PROXIMAL<MESIAL<DISTAL<TOP, BASE<MESIAL2<TOP, PROXIMAL>MIN and DISTAL<MAX, MIN<MESIAL2<MAX |
| 269 | Repet waveform not filled when measurement requested. |

Event Tables

Execution Error Events (cont)

| Code | Description |
|------|--|
| 270 | No measurements during live Roll—enter Save mode first. |
| 271 | Measurement requested on a Delta Delay target but B Horizontal and Delta Delay modes are not on. |
| 272 | RMS measurement invalid due to 2440 internal overflow. |
| 275 | Sequencer currently active—new sequence commands not accepted. |

Internal Errors

Internal Errors are issued when something has happened to the hardware of the 2440 that the controller might like to know about. Set INR to ON to receive SRQ's when any of these events occurs. If INR is OFF, the 2440 will not assert SRQ.

| Code | Description |
|------|--|
| 330 | Cal execute command returns with FAIL. |
| 331 | A 50-Ω overload occurred. Input coupling switched to DC. |

System Messages

System Messages are issued to inform the controller of bus system management events. There is no way to mask these events except by setting RQS to OFF. The event 459 indicates that the 2440 is currently asserting SRQ on the bus and the controller must read the status byte out before reading the event code.

| Code | Description |
|------|---------------------------|
| 401 | 2440 was just powered on. |
| 459 | There is an SRQ pending. |

Event Tables

User Request Events

User Request events are issued when any of the bezel buttons on the 2440 front panel are pushed. The MENUOFF command needs to be issued before these events will be reported. This command allows the user to monitor front panel responses (as well as to clear the menu for writing custom text to the screen when desired). Set USER to ON to receive SRQ's when any of these events occurs. If USER is OFF, the 2440 will not assert SRQ.

| Code | Description |
|------|-------------------------------------|
| 450 | Menu key #1 was pushed (leftmost) . |
| 451 | Menu key #2 was pushed. |
| 452 | Menu key #3 was pushed. |
| 453 | Menu key #4 was pushed. |
| 454 | Menu key #5 was pushed (rightmost). |

Probe Identify Events

Probe Identify events are reported by the 2440 when the probe identify feature found on certain probes is actuated. (You can replicate this action by grounding the outer code ring to the inner shell on the front panel input BNC.) Set PID to ON to receive SRQ's when any of these events occurs. If PID is OFF, the 2440 will not assert SRQ.

| Code | Description |
|------|-------------------------------|
| 455 | CH1 probe identify was used. |
| 456 | CH2 probe identify was used. |
| 457 | EXT1 probe identify was used. |
| 458 | EXT2 probe identify was used. |

Event Tables

Operation Complete Events

Operation Complete events are issued when the controller needs to know when the 2440 has completed a task. Set OPC to ON to receive SRQ's when any of these events occurs. If OPC is OFF, the 2440 will not assert SRQ.

| Code | Description |
|------|---|
| 461 | Single Sequence has completed. |
| 462 | Save-On-Delta has detected a difference and gone to Save. |
| 463 | A print or plot is complete. |
| 464 | Current cal command started with an EXECUTE is done. |
| 465 | Step command is done. |
| 466 | Complete sequence is done. |
| 467 | Autoset search is complete. |

Execution Warning

Execution Warnings are issued when the command received has been done, but the result might not be what the user expected to see. Set EXW to ON to receive SRQ's when any of these events occurs. If EXW is OFF, the 2440 will not assert SRQ.

| Code | Description |
|------|---|
| 539 | 50 MHz bandwidth limit not available in 2440. Bandwidth limit set to 100 MHz. |
| 540 | RMS measurements need at least 1 period. |
| 541 | Amplitude too small to do an accurate timing measurement. |
| 542 | Measurement crossing points on Envelope may be misplaced. Turn on Marks to see where measurement was taken. |
| 543 | Too few points acquired to guarantee Histogram accuracy for this measurement. |

Event Tables

Execution Warning (cont)

| Code | Description |
|------|--|
| 544 | Waveform has points off the top of vertical window. |
| 545 | Waveform has points off the bottom of vertical window. |
| 546 | Waveform has points off the top and bottom of vertical window. |
| 547 | Rising/Falling edge has too few points for optimal accuracy. |
| 548 | Min/Max method should not be used for Overshoot/Undershoot measurements. |
| 549 | Not enough samples taken to do accurate Time, Freq, Period, Pulse Width, or Delay measurement. Set Sec/Div faster if possible. |
| 550 | Only Delay 1 will be displayed if in Average. |
| 551 | Word Recognizer Probe is disconnected. |
| 552 | A and B Sec/Div are locked together. |
| 553 | More than 1024 binary points were sent; excess discarded. |
| 554 | No absolute cursors in slope. |
| 555 | A trigger coupling and logsrc changed. |
| 556 | A trigger source change forced logsrc to off. |
| 557 | No Average in Roll. Acquire mode or A Trigger mode changed. |
| 558 | No live vertical expansion unless averaging. Gain changed. |
| 560 | Volts/Div value requested was rounded or limited. |
| 561 | Variable Volts/Div value requested was limited. |
| 562 | Vertical Position value requested was limited. |
| 563 | A or B trigger level was limited. |
| 564 | Trigger Holdoff value requested was limited. |
| 565 | Horizontal Position value requested was limited. |
| 566 | A or B Sec/Div setting requested was rounded. |
| 567 | Delay by Events events number was limited. |
| 568 | Delay by Time Delay value was limited. |
| 569 | Number of Envelopes requested was rounded. |
| 570 | Number of Averages requested was rounded. |
| 572 | Cursor reference value requested was rounded. |

Event Tables

Command Error Events

| Code | Description |
|------|---|
| 573 | Horizontal position value (XPOS) for cursors was limited. |
| 574 | Vertical position value (YPOS) for cursors was limited. |
| 575 | Intensity value requested was limited. |
| 576 | Line number of screen text message was limited. |
| 578 | The XINCR value was rounded or limited. |
| 579 | The PTOFF value was rounded or limited. |
| 580 | The YMULT value was rounded or limited. |
| 582 | Trigger position number requested was limited. |
| 583 | An ascii data point was rounded to fit into 127 to -128. |
| 584 | Waveform data level value requested was limited. |
| 585 | Start or Stop number was changed. |
| 586 | The YOFF value was limited. |
| 587 | Extexp value requested was limited. |
| 588 | Hysteresis number requested was rounded. |
| 589 | Attribute number requested was rounded. |

Device Dependent Message

Device Dependent messages are issued when the front panel user of the 2440 has done something that the controller might want to know about. Set DEVDEP to ON to receive SRQ's when any of these events occurs. If DEVDEP is OFF, the 2440 will not assert SRQ.

| Code | Description |
|------|--|
| 650 | Waveform was requested from front panel. |
| 651 | Waveform transmission was aborted from front panel. |
| 652 | MENUOFF command was executed or front panel button pushed. |

Fatal Error

A Fatal Error is issued when something completely unexpected happens inside the 2440. This normally is caused by a hardware failure. There is no way to prevent this error from being reported except by turning RQS to OFF.

| Code | Description |
|------|--------------|
| 750 | Fatal error. |

2440 Status Bytes

On the following two pages is the 2440 Status Byte table. It lists each status byte code, along with the instrument status indicated by each code, that can be returned when the EVEnts query is sent by the controller.

2440 Status Bytes

| Title | Binary ^a | Decimal | | | | Priority | |
|---------------------|---------------------|---------|------|--------|------|----------|--------|
| | | RQS Off | | RQS On | | RQS Off | RQS On |
| | | Idle | Busy | Idle | Busy | | |
| No Status To Report | 000X 0000 | 0 | 16 | 0 | 16 | 2 | 1 |
| Power On | 010X 0001 | 1 | 17 | 65 | 81 | 2 | 9 |
| Operation Complete | 0R0X 0010 | 2 | 18 | 66 | 82 | 2 | 3 |
| User Request | 0R0X 0011 | 3 | 19 | 67 | 83 | 2 | 8 |
| Command Error | 0R1X 0001 | 33 | 49 | 97 | 113 | 2 | 7 |
| Execution Error | 0R1X 0010 | 34 | 50 | 98 | 114 | 2 | 6 |
| Internal Error | 0R1X 0011 | 35 | 51 | 99 | 115 | 2 | 5 |
| Execution Warning | 0R1X 0101 | 37 | 53 | 101 | 117 | 2 | 4 |

| | | | | | | | |
|------------------|-----------|-----|-----|-----|-----|----|----|
| Transmit Request | 1R0X 0011 | 131 | 147 | 195 | 211 | 2 | 8 |
| Transmit Aborted | 1R0X 0100 | 132 | 148 | 196 | 212 | 2 | 8 |
| Menuoff Pushed | 1R0X 0101 | 133 | 149 | 197 | 213 | 2 | 8 |
| Fatal Error | 1R1X 0011 | --- | --- | 227 | 243 | -- | 10 |

Device Dependent Bit
 RQS Bit
 Error Bit
 Busy Bit

^a“r” is set to 1 if the GPIB and RQS are on; otherwise, it is 0.

^b“X” is the Busy Bit and will be set if the 2440 is busy at the time the status byte is read. Any time the 2440 is doing something for which the OPC SRQ can be sent (calibration or self test, single sequence, Save-On-Delta, or plotting) the bit will be sent true (1); otherwise, it will be a 0.
