

MAX30003WING2# Evaluation Kit

Evaluates: MAX32663A

General Description

The MAX30003WING2 evaluation kit demonstrates the use of the MAX32663A MCU as an ECG sensor hub. The MAX32663A runs advanced ECG algorithms provided by B-Secur, which transforms raw ECG data collected from the MAX30003 analog front end (AFE) into simple, high-level information which is then communicated to the MAX32620FTHR host processor through the I²C interface. The EV kit is accompanied by PC software, which allows easy evaluation of the ECG algorithms.

The kit includes the following items:

- MAX30003WING2# Circuit Board
- MAX326325PICO JTAG Debugger/Programmer
- MAX32620FTHR Feather Board
- Micro USB Cables
- SWD Cable

Benefits and Features

- Integrates B-Secur ECG Firmware
- Evaluates MAX32663A Sensor Hub and the MAX30003 ECG AFE
- Measures Heart Rate, Heart Rate Variability, and Stress
- User Identification through ECG Analysis
- PCB ECG Electrodes
- Connector for External ECG Electrodes
- Adafruit® Feather-Compatible Host Processor Socket with MAX32620FTHR Board Installed

Ordering Information appears at end of data sheet.

Detailed Description

The EV kit demonstrates several B-Secur ECG algorithms that execute on the MAX32663A sensor hub. The MAX30003 provides the AFE to integrated ECG PCB pads and optional external electrodes (not included). The EV kit supports the following B-Secur algorithms:

- Heart Rate
- Heart Rate Variability
- Stress
- Energy Expenditure
- User Identification

The MAX32620FTHR serves as the host MCU, which obtains high-level ECG information from the sensor hub through an I²C interface and relays the information to a Windows® PC application through USB. This host MCU could serve as an embedded platform for user application development.

The kit is accompanied by Windows PC software and host MCU source code, which can be downloaded from the [MAX30003WING2](#) EV kit product page.
