Dual-Band CDMA Upconverter

The MRFIC1884 is an integrated upmixer, RF AGC amplifier and driver amplifier designed for dual-band, tri-mode CDMA/AMPS/PCS CDMA cellular radios. The device incorporates a temperature compensated linear gain control and an active bias control that reduces supply current at lower output power. The design utilizes Motorola's RF BiCMOS process and is packaged in a small cost effective BCC32++ package.

- Designed for Dual-Band, Tri-Mode Operation
 - Total Supply Current CDMA/PCS CDMA Mode = 60 mA (Typ)
 - Total Supply Current AMPS Mode = 42 mA (Typ)
- High Output Power
 - 6.0 dBm for CDMA
 - 6.0 dBm for PCS CDMA
 - 11 dBm for AMPS
- Supply Voltage Range: 2.7 to 3.2 V
