1 Introduction

The TO-263 THIN Package is a family of surface mount power packages designed with the following features:

- Footprint/drop-in compatible with the standard TO-263 package but with a thinner and smaller molded body package outline
- Qualified using Halogen-Free “Green” Compound
- Moisture Sensitivity Level 1 (MSL) at 260° C
- Efficient thermal heat dissipation similar to that of the standard TO-263 package
- JEDEC registered as TO-279

2 Package Key Attributes

- TO-263 THIN is designed using the same body size and thickness for all 3, 5, 7 and 9 lead options, see [Figure 1](#).
- The leads are formed into a Gull-Wing configuration.
- All TO-263 THIN package leads are Pb-Free compliant.
- Shipped in non conductive Tape and Reel. Tube form will be available upon special request.
- Detailed package dimensions are shown in [Table 1](#).

Figure 1. TO-263 THIN Package Attributes (see [Table 1](#))

Table 1. TO-263 THIN Package Dimensions (see Figure 1)

Package Attribute	Symbol	Dimensions mm[inches]			
		3 Lead	5 Lead	7 Lead	9 Lead
Lead Width	b	0.83[0.033]		0.685[0.027]	0.51[0.020]
Lead Pitch	e	2.54[0.100]	1.7[0.067]	1.27[0.050]	0.965[0.038]
Package Thickness	A	2.00 [0.079]			
Package Length	D	9.85[0.387]			
Exposed DAP Length w/extended tab	D1	6.35[0.25]			
Exposed DAP Length	D2	5.24[0.206]			
Package Width	E	10.16[0.400]			
Exposed DAP Width w/extended tab	E1	5.59[0.220]			
Exposed DAP Width	E2	6.49[0.256]			

3 PCB Surface Mount (SMT) Quality

3.1 Surface Mount IPC Standards

To demonstrate that the TO-263 THIN is PCB drop in compatible with the standard TO-263 packages, parts were tested using the standard IPC-A-61D surface mount reject criteria: A mounted package is rejected if the package lead overhang (A) is greater than 25% of lead width (W), see Figure 2.

Figure 2. IPC-A-61D Surface Mounting Specifications

3.2 PCB Drop in Compatibility

Three different PCB stencil layouts, TS5A, TS5B and TJ5A were designed to match the standard TO-263 package and the TO-263 THIN package exposed metal footprints as shown in Figure 3. Tape & Reel and Tube carriers were used in loading the parts into the pick and place IR furnace. The TO-263 THIN package post solder reflow inspection results show 100% mounting package alignment and post 750 cycles TMCL yield, see Table 2. Further X-Ray and cross-section analysis show leads and exposed DAP solder thickness and alignment are positioned relatively center to the PCB pads, meeting IPC requirements as shown in Figure 4, Figure 5 and Figure 6.

Figure 3. TO-263 THIN and Standard TO-263 Packages with the TJ5A PCB Layout

Table 2. SMT PCB Board Mounting Assembly and Post 750 Cycles TMCL Yield

PCB Footprint	Package Type	Sample Size	Assembly Yield	TMCL 750 Cycles Failure
TS5A	TO-263 Standard	352	100%	0/64
TS5A	TO-263 THIN	352	100%	0/64
TS5B	TO-263 Standard	352	100%	0/64
TS5B	TO-263 THIN	352	100%	0/64
TJ5A	TO-263 Standard	352	100%	0/64
TJ5A	TO-263 THIN	352	100%	0/64

4 Thermal Performance

4.1 TO-263 Package to TO-263 Thin Package Thermal Comparison

Thermal measurements between the standard TO-263 package and the TO-263 THIN package were compared using a Power Switcher device (LM2596). The results demonstrate that the TO-263 THIN junction-to ambient (θ_{JA}) performance is better, see [Table 3](#) and [Figure 7](#).

Table 3. Thermal Comparison Between TO-263 and TO-263 THIN

Package	TO-263			TO-263 THIN		
	0.5 W	1.0 W	2.0 W	0.5 W	1.0 W	2.0 W
θ_{JA} (°C/W)	24.9	24.8	23.6	22.5	22.3	22.0
Qual Vehicle: LM2596 Test Condition: No Air Flow, JEDEC 4 Layer Test Board						

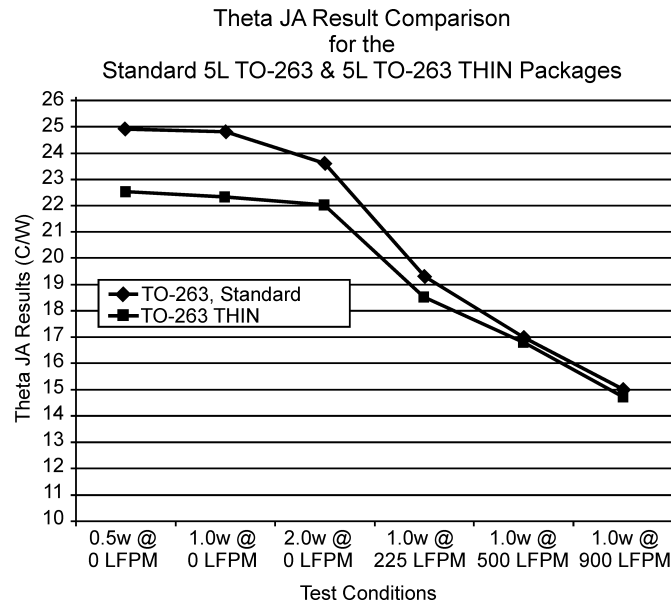

Figure 7. Thermal Performance Comparison of Various Power and Air Flows

4.2 Printed Circuit Board (PCB) Layout

- The PCB layout is design per JEDEC JESD51-7 and JESD51-5 thermal boards.
- The thermal test boards are 16 square inch (4.0" x 4.0") with a 4-layer Cu configuration of 2oz/1oz/1oz/2oz. Cross section thermal boards have 25 thermal vias connecting the DAP landing pattern on the top layer to the bottom layer assigned as ground layers as shown in Figure 8.

Figure 8. Thermal Board Cross Section

4.3 PCB Board Enhancement to Thermal Performance

The effective thermal resistance between junction-to-ambient (θ_{JA}) is highly dependent on the PCB (Printed Circuit Board) design. To demonstrate this dependency, two identical JEDEC thermal board one with 2 layer, 2oz.Cu and one with a 4 layer 2oz.Cu were compared using a standard TO-263 package. Results validate that the 4-layer board had an average of 50% Junction-to-ambient (θ_{JA}) improvement over the 2 layer board, see Figure 9 and Figure 10.

Figure 9. JEDEC Thermal Boards

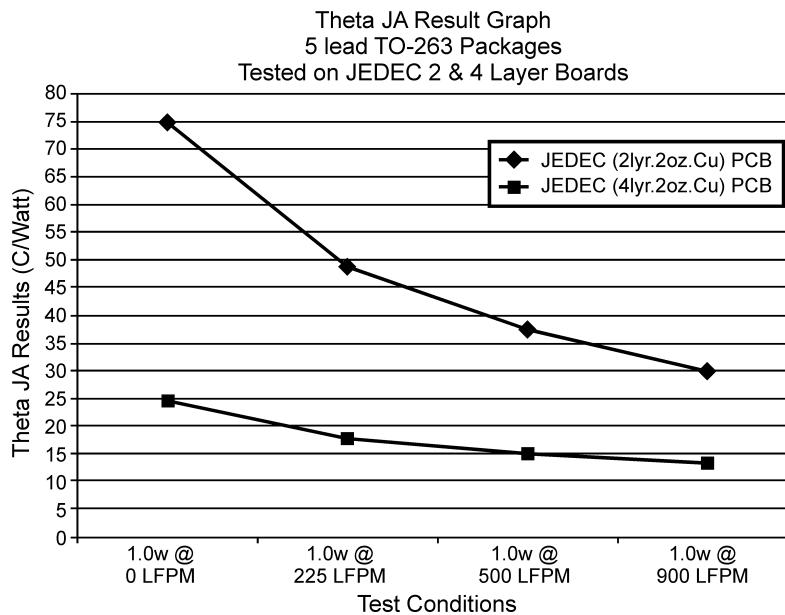

Figure 10. Thermal Performance Comparison of 2 to 4 layer Board

5 Package Reliability

The TO-263 THIN package has been subjected to 260° C lead-to-PCB IR furnace mounting and has passed the following stringent reliability qualification, see [Table 4](#).

Table 4. TO-263 THIN Package Reliability Testing

Low Dropout Regulator Product	Time Point	TO-263 Standard	TO-263 THIN TL1	TO-263 THIN TL2	TO-263 THIN TL3	Comment

6 Die Adhesion Strength

The TO-263 THIN package was tested to MIL-STD-883E method 2019.5 die shear strength requirements. The results show die shear strength exceeded test requirements even on un-molded parts that were subjected to various temperature cycles beyond 883 method conditions, see [Table 5](#).

Table 5. Post -65/+150° C Temperature Soak Die Shear Testing

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
