

## BATTERY-BACKUP SUPERVISOR FOR RAM RETENTION

### FEATURES

- Supply Current of 40  $\mu$ A (Max)
- Battery Supply Current of 100 nA (Max)
- Precision 5-V Supply Voltage Monitor, Other Voltage Options on Request
- Backup-Battery Voltage Can Exceed  $V_{DD}$
- Watchdog Timer With 800-ms Time-Out
- Power-On Reset Generator With Fixed 100-ms Reset Delay Time
- Voltage Monitor for Power-Fail or Low-Battery Monitoring
- Battery Freshness Seal (TPS3617 Only)
- 8-Pin MSOP Package
- Temperature Range:  $-40^{\circ}$  to  $+85^{\circ}$ C

### APPLICATIONS

- Fax Machines
- Set-Top Boxes
- Advanced Voice Mail Systems
- Portable Battery Powered Equipment
- Computer Equipment
- Advanced Modems
- Automotive Systems
- Portable Long-Time Monitoring Equipment
- Point-of-Sale Equipment

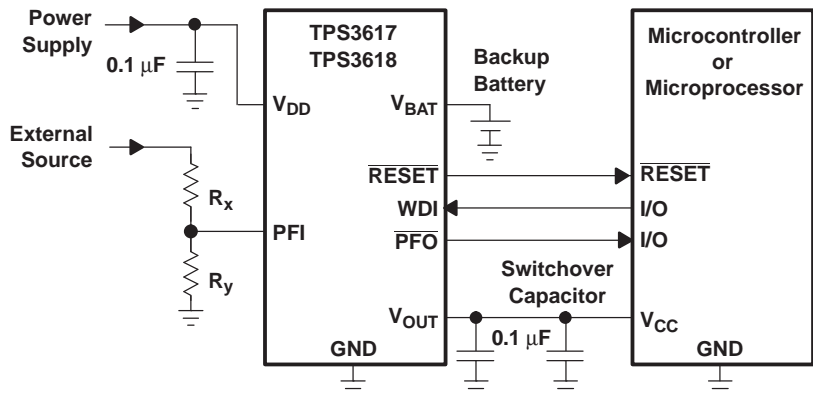

### DESCRIPTION

The TPS3617 and TPS3618 are battery-backup supervisors that monitor 5 V supplies. They provide a battery-backup function ideal for applications that require data retention of CMOS RAM during fault conditions. When the voltage at  $V_{DD}$  drops below a preset threshold ( $V_{IT}$ ), the active low push-pull  $\overline{\text{RESET}}$  output asserts, and  $V_{OUT}$  switches from  $V_{DD}$  to  $V_{BAT}$ . When  $V_{DD}$  rises above the trip threshold,  $V_{OUT}$  switches immediately from  $V_{BAT}$  to  $V_{DD}$ . The  $\overline{\text{RESET}}$  output remains low until the delay time ( $t_d$ ) expires. During power on,  $\overline{\text{RESET}}$  is asserted when the supply voltage ( $V_{DD}$  or  $V_{BAT}$ ) goes higher than 1.1 V.

The PFI and  $\overline{\text{PFO}}$  pins are provided if additional voltage monitoring is needed. If the voltage at PFI is less than 1.15 V, the push-pull  $\overline{\text{PFO}}$  pin will assert low. When the voltage at PFI exceeds the threshold voltage,  $\overline{\text{PFO}}$  will go high.

These devices also feature a watchdog timer pin ( $\overline{\text{WDI}}$ ) that monitors processor activity and asserts  $\overline{\text{RESET}}$  if the the processor is inactive longer than the watchdog timeout period. If the watchdog timer is not used, the  $\overline{\text{WDI}}$  pin should be left floating.

The TPS3617 and TPS3618 are available in an 8-pin MSOP package and are characterized for operation over a temperature range of  $-40^{\circ}$ C to  $+85^{\circ}$ C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### PACKAGE INFORMATION<sup>(1)</sup>

PRODUCT	NOMINAL SUPPLY VOLTAGE	THRESHOLD VOLTAGE (V <sub>IT</sub> ) <sup>(2)</sup>	SPECIFIED TEMPERATURE RANGE	PACKAGE MARKING	ORDERING NUMBER	TRANSPORT MEDIA, QUANTITY
TPS3617-50	5V	4.55V	−40°C to +125°C	ASD	TPS3617-50DGK	Tube, 80
					TPS3617-50DGKR	Tape and Reel, 2500
TPS3618-50				ANK	TPS3618-50DGKT	Tape and Reel, 250
					TPS3618-50DGKR	Tape and Reel, 2500

(1) For the most current package and ordering information, see the Package Option Addendum at the end of this data sheet, or refer to our web site at [www.ti.com](http://www.ti.com).

(2) For other threshold voltages, contact the local TI sales office for availability and lead time.

### ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature (unless otherwise noted)<sup>(1)</sup>

	TPS3617, TPS3618	UNIT
Input voltage range, $V_{DD}$	–0.3 to 7	V
Input voltage range, PFI pin	–0.3 to ( $V_{DD} + 0.3$ )	V
WDI pin	–0.3 to ( $V_{DD} + 0.3$ )	V
Continuous output current at $V_{OUT}$ , $I_O$	400	mA
All other pins, $I_O$	±10	mA
Operating junction temperature range, $T_J$ <sup>(2)</sup>	–40 to +85	°C
Storage temperature range, $T_{STG}$	–65 to +150	°C
Lead temperature soldering 1,6 mm (1/16 inch) from case for 10 seconds	+260	°C
Continuous total power dissipation	See <a href="#">Dissipation Rating Table</a>	

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) Due to the low dissipated power in this device, it is assumed that  $T_J = T_A$ .

### DISSIPATION RATING TABLE

PACKAGE	$T_A \leq +25^\circ\text{C}$ POWER RATING	DERATING FACTOR ABOVE $T_A = +25^\circ\text{C}$	$T_A = +70^\circ\text{C}$ POWER RATING	$T_A = +85^\circ\text{C}$ POWER RATING
DGK	470 mW	3.76 mW/°C	301 mW	241 mW

## ELECTRICAL CHARACTERISTICS

1.65 V ≤ V<sub>DD</sub> ≤ 5.5 V, R<sub>LRESET</sub> = 1 MΩ, C<sub>LRESET</sub> = 50 pF, over operating temperature range (T<sub>J</sub> = –40°C to +85°C), unless otherwise noted. Typical values are at T<sub>J</sub> = +25°C.

## DETAILED DESCRIPTION

### BATTERY FRESHNESS SEAL (TPS3617 Only)

The battery freshness seal of the TPS3617 family disconnects the backup battery from the internal circuitry until it is needed. This ensures that the backup battery connected to  $V_{BAT}$  should be fresh when the final product is put to use. The following steps explain how to enable the freshness seal mode:

1. Connect  $V_{BAT}$  ( $V_{BAT} > V_{BAT(min)}$ ).
2. Ground  $\overline{PFO}$ .
3. Connect PFI to  $V_{DD}$  ( $PFI = V_{DD}$ ).
4. Connect  $V_{DD}$  to power supply ( $V_{DD} > V_{IT}$ ) and keep connected for  $5\text{ ms} < t < 35\text{ ms}$ .

The battery freshness seal mode is disabled by the positive-going edge of  $\overline{RESET}$  when  $V_{DD}$  is applied.

### POWER-FAIL COMPARATOR (PFI AND $\overline{PFO}$ )

An additional comparator monitors voltages other than the nominal supply voltage. The power-fail-input (PFI) can be compared with an internal voltage reference of 1.15 V. If the input voltage falls below the power-fail threshold ( $V_{(PFI)}$ ) of 1.15 V typical, the power-fail output ( $\overline{PFO}$ ) goes low. If it goes above  $V_{(PFI)}$  plus about 12-mV hysteresis, the output returns to high. By connecting two external resistors it is possible to supervise any voltages above  $V_{(PFI)}$ . The sum of both resistors should be about 1 M $\Omega$ , to minimize power consumption and also to ensure that the current in the PFI pin can be neglected compared with the current through the resistor network. The tolerance of the external resistors should be not more than 1% to ensure minimal variation of the sensed voltage. If the power-fail comparator is unused, connect PFI to ground and leave the  $\overline{PFO}$  unconnected.

### WATCHDOG

In a microprocessor- or DSP-based system, it is not only important to supervise the supply voltage, it is also important to ensure correct program execution. The task of a watchdog is to ensure that the program is not stalled in an indefinite loop. The microprocessor, microcontroller, or DSP has to toggle the watchdog input within 0.8 s typically, to avoid a timeout from occurring. Either a low-to-high or a high-to-low transition resets the internal watchdog timer. If the input is unconnected, the watchdog is disabled and should be retriggered internally. See Figure 13 for the watchdog timing diagram.

Figure 13. Watchdog Timing

## DETAILED DESCRIPTION (continued)

### SAVING CURRENT WHILE USING THE WATCHDOG

The watchdog input is internally driven low during the first 7/8 of the watchdog time-out period, then momentarily pulses high, resetting the watchdog counter. For minimum watchdog input current (minimum overall power consumption), leave WDI low for the majority of the watchdog time-out period, pulsing it low-high-low once within 7/8 of the watchdog time-out period to reset the watchdog timer. If instead, WDI is externally driven high for the majority of the time-out period, a current of e.g.  $5.0 \text{ V}/40 \text{ k}\Omega \approx 125 \mu\text{A}$  can flow into WDI.

### BACKUP-BATTERY SWITCHOVER

In case of a brownout or power failure, it may be necessary to preserve the contents of RAM. If a backup battery is installed at  $V_{\text{BAT}}$ , the device automatically switches the connected RAM to backup power when  $V_{\text{DD}}$  fails. In order to allow the backup battery (e.g., a 3.6-V lithium cell) to have a higher voltage than  $V_{\text{DD}}$ , these supervisors should not connect  $V_{\text{BAT}}$  to  $V_{\text{OUT}}$  when  $V_{\text{BAT}}$  is greater than  $V_{\text{DD}}$ .  $V_{\text{BAT}}$  only connects to  $V_{\text{OUT}}$  (through a 15- $\Omega$  switch) when  $V_{\text{DD}}$  falls below  $V_{\text{IT}}$  and  $V_{\text{BAT}}$  is greater than  $V_{\text{DD}}$ . When  $V_{\text{DD}}$  recovers, switchover is deferred either until  $V_{\text{DD}}$  crosses  $V_{\text{BAT}}$ , or until  $V_{\text{DD}}$  rises above the reset threshold  $V_{\text{IT}}$ .  $V_{\text{OUT}}$  connects to  $V_{\text{DD}}$  through a 1- $\Omega$  (max) PMOS switch when  $V_{\text{DD}}$  crosses the reset threshold.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 per end.
  - D. Body width does not include interlead flash. Interlead flash shall not exceed 0.50 per side.
  - E. Falls within JEDEC MO-187 variation AA, except interlead flash.

DGK (S-PDSO-G8)

PLASTIC SMALL OUTLINE PACKAGE

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Publication IPC-7351 is recommended for alternate designs.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.
